

PREFACE TO THE XLIIND ANNUAL VOLUME.

(1910.)

THE changes in the present volume are mainly due to the interest which has been aroused by the Finance Bill of 1909, and the contemplated revision of the various imposts is shown in the Tables of Taxes, while the Licences recently transferred to Local Authorities are also shown on a neighbouring page. Additional space has been allotted to the doings and sayings of Parliament, and the record has been modelled with a view to celerity and ease of reference.

Many new articles will be found, including the latest triumphs of Aerial Navigation, a review of Social Progress in the last Fifty Years, the Export of British Capital, the Imperial Press Conference, the Break-up of the Poor Law, the Valuation of London, the Children's Charter, and the opening up of the Southern Congo; while a Scientific and Engineering Summary has again been added, and Naval and Military affairs are closely chronicled.

The whole volume has been subjected to the most rigid supervision, new matter has been introduced wherever circumstances demanded, and full advantage has been taken of the obliging co-operation of subscribers in all quarters of the inhabited globe.

The Editor desires to record his gratitude to the many correspondents for their whole-hearted efforts to ensure the perfection of the work, and he will always endeavour to deserve this consideration. Once again, however, he permits himself to request that letters may be dispatched at such dates as will secure their *delivery* in London *not later than* the last day of *October*.

12 WARWICK LANE,

LONDON, E.C., 20th November, 1909.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

January 1. Day breaks at 5h. 2m. morn., and Twilight ends at 6h. 4m. aft., the length of the Day being 7h. 50m.

Jan. 4. Occultation of 65 and 66 Virgins; magnitude 6° and 5°7' respectively. The disappearances take place at 3h. 2m. morn. and 3h. 48m. morn., at 84° and 97° from the vertex respectively; the reappearances at 3h. 25m. morn. and 4h. 33m. morn., at 44° and 20° from the vertex respectively.

Jan. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 10.7s.

Jan. 7. Venus at greatest brilliancy, 5h. aft.

Jan. 10. Mercury at greatest elongation (19°) E., 1h. aft.

Jan. 12. Mercury in conjunction with the Moon, 9h. 12m. aft.

Jan. 14. Venus in conjunction with the Moon, 3h. 22m. morn.

Jan. 17. Saturn in conjunction with the Moon, 3h. 45m. aft.

Jan. 17. Occultation of ♄ Piscium; magnitude 5.3. The disappearance takes place at 6h. 47m. aft., 21° from the vertex; the reappearance at 7h. 52m. aft., 232° from the vertex.

Jan. 18. Mars in conjunction with the Moon, 7h. 19m. morn.

Jan. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 9.4s.

Jan. 20. Venus stationary, 2h. aft.

Jan. 21. Occultation of α² Tauri; magnitude 4.8. The disappearance takes place at 3h. 3m. morn., 50° from the vertex; the reappearance at 3h. 53m. morn., 215° from the vertex.

Jan. 23. Occultation of 37 Geminorum; magnitude 5.7. The disappearance takes place at 4h. 39m. aft., 48° from the vertex; the reappearance at 4h. 52m. aft., 22° from the vertex.

Jan. 26. Mercury in inferior conjunction with the Sun, 9h. morn.

Jan. 31. Jupiter in conjunction with the Moon, 0h. 5m. morn.

In this month the Mornings increase 25m., and the Afternoons 47m.

* The Meteorological Observations throughout the Almanack are those recorded at the Royal Observatory Greenwich. They include the highest and lowest readings of the *Thermometer*, with the average for 65 years; the mean of *Barometer* at a height of 155 feet above the mean level of the sea; the daily *Rainfall*, the daily *Shine*, and the daily general direction and maximum force of the *Wind*.

Mean Longitude of Moon's Ascending Node, February 1, 64° 6' II.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

February 1. Day breaks at 5h. 42m. morn., and twilight ends at 6h. 46m. aft., the length of the Day being 9h. 4m.

Feb. 4. Venus at least distance from the Sun, 5h. aft.

Feb. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 7.56.

Feb. 7. Mercury stationary, oh. morn.

Feb. 8. Mercury in conjunction with the Moon, 6h. 8m. morn. ♀ 6° 25' N.

Feb. 10. Venus in conjunction with the Moon, oh. 36m. morn. ♀ 13° 34' N.

Feb. 12. Venus in inferior conjunction with the Sun, oh. aft.

Feb. 14. Saturn in conjunction with the Moon, 1h. 22m. morn. ♀ 1° 18' N.

Feb. 15. Mars in conjunction with the Moon, 6h. 12m. aft. ♂ 3° 1' N.

Feb. 20. Occultation of 37 Gem-norum; magnitude 5.7. The disappearance takes place at oh. 35m. morn., 55' from the vertex; the reappearance at 1h. 37m. morn., 236' from the vertex.

Feb. 20. Mercury at greatest elongation (27°) W., 5h. morn.

Feb. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 6.08.

Feb. 20. Neptune in conjunction with the Moon, 9h. 33m. morn. ♀ 4° 10' S.

Feb. 23. Occultation of Leonis; magnitude 5.8. The disappearance takes place at 11h. 52m. aft., 101' from the vertex; the reappearance at 1h. 2m. on the morning of the 24th, 315' from the vertex.

Feb. 27. Jupiter in conjunction with the Moon, 5h. 34m. morn. ♀ 2° 29' S.

In this month the Mornings increase 5m., and the Afternoons 49m.

* The days thus indicated throughout the Almanack are those on which High Tides may be expected. Strong northerly winds in the North Sea and a low barometer with heavy rains in the counties drained by the Finesse will probably cause a higher rise of the river, and the low-lying riverside districts to be flooded.

APPROXIMATE RIGHT ASCENSION AND DECLINATION OF THE POLE STAR.

R.A.				DECL. N.			
D.	H.	M.	S.	D.	H.	M.	S.
1	1	25	18.5	88	49	50	
10	1	25	9.6	88	49	49	
19	1	25	1.6	88	49	48	
28	1	25	52.6	88	49	45	

MORNING AND EVENING STARS.

☿ MERCURY is a morning star throughout the month, rising S.E. by E.

♀ VENUS is an evening star at the beginning of the month, setting W. by S.

♂ MARS souths about 5 p.m. : altitude about 55°.

♃ JUPITER nearly stationary in Virgo.

♄ SATURN is an evening star, setting W. by N.

In the early part of this month the constellations Ursa Major, Lynx, Cancer, and a part of Hydra are on the meridian about midnight. In Cancer there is a very beautiful cluster of stars, preceding a Cancri about 8 m. in R.A. and nearly same declination, consisting of some 200 stars from the 8th to 13th magnitudes. The fine group of stars in Cancer, called "Praesepe," can be best observed in this month on the nights immediately preceding and following the 16th. It does not

consist of a very great number of stars, but the components are, as compared with those of other clusters, of considerable magnitude. It is situated in R.A. 8h. 23m. and Decl. 20° 20' N., about 1° to the west of a line joining the stars δ and γ Cancri.

The triple star c in Cancer may be examined in this month: it will be found in R.A. 2h. 7m. 38. and Decl. 17° 55' N. Neptune and Juno can be observed in this month. See p. 94.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

March 1. Day breaks at 4h. 55m. morn., and Twilight ends at 7h. 37m. aft., the length of the Day being 10h. 42m.

Mar. 4. Venus stationary, ch. morn.

Mar. 5. Mean time of Sun's semidiameter passing the meridian, 10. 55s.

Mar. 8. Venus in conjunction with the Moon, 9h. 17m. aft. 9 12 52' N.

Mar. 9. Mercury in conjunction with the Moon, 8h. 32m. aft. 9 3 15' N.

Mar. 10. Vesta in conjunction with the Moon, 6h. aft. Vesta 12 9' N.

Mar. 13. Saturn in conjunction with the Moon, 2h. 45m. aft. 12 0' 58' N.

Mar. 16. Mars in conjunction with the Moon, 7h. 17m. morn. 6 12 16' N.

Mar. 19. Venus at greatest brilliancy, 5h. morn.

Mar. 19. Neptune in conjunction with the Moon, 2h. 20m. aft. Neptune 42 21' S.

Mar. 20. Occultation of α Gemmorum; magnitude 3.6. The disappearance takes place at 2h. 29m. morn., 95° from the vertex; the reappearance at 3h. 12m. morn., 213° from the vertex.

Mar. 20. Mean time of Sun's semidiameter passing the meridian, 4m. 43s.

Mar. 21. Sun enters sign Aries. Spring commences, ch. 3m. aft.

Mar. 26. Jupiter in conjunction with the Moon, 6h. 21m. morn. 12 33' S.

Mar. 29. Occultations of 8 Librae and a Librae; magnitudes 5.4 and 2.9 respectively. The disappearances take place at 3h. 39m. morn., 142° from the vertex, and 3h. 52m. morn., 145° from the vertex, respectively; the reappearances at 4h. 43m. morn., 238° from the vertex, and 4h. 51m. morn., 231° from the vertex, respectively.

Mar. 31. Occultation of ρ Ophiuchi; magnitude 4.7. The disappearance takes place at 2h. 53m. morn., 179° from the vertex; the reappearance at 3h. 37m. morn., 235° from the vertex.

In this month the Mornings increase 1h. 8m., and the Afternoons 51m.

MORNING AND EVENING STARS.

☿ MERCURY is a morning star till the 26th, when it rises with the Sun. Rises early in the month E.S.E., and later on E. by S.
 ♀ VENUS is a morning star, rising E.S.E.
 ♂ MARS sets about midnight, N.W. by W.
 ♃ JUPITER rises in the evening between 7h. and 8h., a little South of East.
 ♄ SATURN is an evening star, setting W. by N.

At midnight, in the beginning of March, the constellations Ursa Major, Leo, Crater, and Hydra are on the meridian. In Ursa Major is a large planetary Nebula, appearing as a mass of attenuated light, from $3\frac{1}{2}'$ to $4'$ in diameter; it lies $2\frac{1}{2}^{\circ}$ S.E. of β Ursa Majoris.

Virgo comes to the meridian about midnight towards the end of the month. Between Virgo and Coma Berenices is a large Nebula, one of the

class known as "Spiral Nebulae," situated in R.A. 12h. 14m. and Decl. 15° 0' N. With a large telescope of 5 inches aperture it appears to be resolvable in the centre into two bright starlike points. This constellation is thickly strewed with nebulae, which may be best observed on the evenings immediately before and after the 11th of the month.

PHASES OF THE MOON.

- ☾ Last Quarter 3d. 0h. 48m. Morning.
 ● New Moon 9 9 25 Afternoon.
 ☾ First Quarter 16 2 4 Afternoon.
 ○ Full Moon 24 1 23 Afternoon.

Perigee 10d. 0h. M. 222,200.

Apogee 24d. 2h. A. 252,500.

RAIN FELL IN APRIL, 1909,

on 16 days; total fall, 1'65 inches; below the average, 1841-90, by '01 inch.

MONTHLY NOTES.

April 1. Refreshment House Licences to be renewed. Clerks of the Peace and Town Clerks send registration precepts to Overseers before 15th inst.

4. Triennial elections of Parish Councils take place.

5. Dividends on Consols, &c., due. Financial year, 1909-1910, for Imperial purposes ends to-day.

- Ordinary day for election of Urban and Rural District Councillors. Quarter Sessions to be held this week unless otherwise fixed.

9. Fire Insurances must be paid.

15. Parish Councils to hold their annual meeting on or within seven days of this date.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

April 1. Day breaks at 3h. 37m. morn., and Twilight ends at 2h. 32m. aft., the length of the Day being 12h. 52m.

Apr. 5. Mean time of Sun's semidiameter passing the meridian 1m. 4' 4".

Apr. 5. Mercury in superior conjunction with the Sun, 12h. aft.

Apr. 6. Venus in conjunction with the Moon, 10h. 51m. morn. 9 7 42' N.

Apr. 8. Vesta in conjunction with the Moon, 3h. morn. Vesta 6° 22' N.

Apr. 10. Mercury in conjunction with the Moon, 3h. 19m. morn. 5° 59' N.

Apr. 10. Saturn in conjunction with the Moon, 6h. 52m. morn. 15° 40' N.

Apr. 11. Mercury and Saturn in conjunction, 6h. 29m. morn. 2° 21' N.

Apr. 13. Occultation of 103 Tauri; magnitude 5.5. The disappearance takes place at 6h. 53m. aft., 4' from the vertex; the reappearance at 7h. 43m. aft., 26' from the vertex.

Apr. 13. Mars in conjunction with the Moon, 9h. 42m. aft. 5° 28' N.

Apr. 13. Occultation of Mars. The disappearance takes place at 10h. 28m. aft., 0' from the vertex; the reappearance at 11h. 4m. aft., 278' from the vertex.

Apr. 16. Occultation of A Gemini; magnitude 5.7. The disappearance takes place at 0h. 5m. morn., 114' from the vertex; the reappearance at 0h. 35m. morn., 138' from the vertex.

Apr. 20. Mean time of Sun's semidiameter passing the meridian 1m. 5' 0".

Apr. 23. Venus at greatest elongation (46°) W., 3h. aft.

Apr. 28. Occultation of 26 Ophiuchi; magnitude 5.8. The disappearance takes place at 0h. 35m. morn., 100' from the vertex; the reappearance at 1h. 48m. morn., 323' from the vertex.

In this month the Mornings increase 1h. 2m., and the Afternoons 48m.

MORNING AND EVENING STARS.

☿ MERCURY is an evening star after the 6th, setting W. by N. in the early part of the month, W.N.W. in the middle, and N.W. by W. at the end.

♀ VENUS is a morning star, rising E. by S.

♂ MARS sets N.W. about midnight.

♃ JUPITER in Virgo, near to γ Vir. inis.

♄ SATURN is an evening star till the 15th, when it sets with the Sun, W. by N.

At the latter part of April the constellations Draco, Bootes, and Libra will be on the meridian about midnight. An irresolvable double Nebula in Canes Venatici, about 4° S.W. of η Ursa Majoris, can be observed in this month. The Southern Nebula is surrounded by a faint ring of nebulous light, and was called by Herschel, in his Catalogue, "the Halo Nebula." Later observations placed it among the "Spiral" Nebulae. That this is not a true incandescent Nebula is shown by the

absence of bright lines in its spectrum. In R.A. 15h. 14m., Decl. 2° 28' N., is a very fine cluster of stars, condensed into great brilliancy towards the centre. Sir W. Herschel was able to distinguish over 200 stars in this group in the field of his 40-ft. reflector, but found the middle portion so condensed that the individual stars could not be separated. The stars range from the 12th to 15th mag. The evenings about the 6th are the best for observing these objects.

Mean Longitude of Moon's Ascending Node, May 1, 59° 23' 8".

WHITAKER'S ALMANACK, 1910.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

May 1. Day breaks at 2h. 3m. morn., and Twilight ends at 9h. 51m. aft., the length of the Day being 14h. 45m.

May 2. Mercury at greatest elongation (21°) E., 4h. aft.

May 5. Mean time of Sun's semidiameter passing the meridian, 1m. 61s.

May 5. Venus in conjunction with the Moon, 8h. 43m. aft. ♀ 3° 55' N.

May 6. Vesta in conjunction with the Moon, 6h. aft. Vesta 1° 0' S.

May 7. Saturn in conjunction with the Moon, 11h. 33m. aft. ♀ 0° 23' N.

May 9. A Total Eclipse of the Sun, invisible at Greenwich, 5h. 3m. morn. (See p. 83).

May 10. Jupiter at greatest distance from the Sun, 6h. aft.

May 10. Mercury in conjunction with the Moon, 6h. 30m. aft. ♀ 1° 18' N.

May 12. Mars in conjunction with the Moon, 6h. 47m. aft. ♂ 1° 59' S.

May 13. Neptune in conjunction with the Moon, 5h. 51m. morn. Neptune 4° 39' S.

May 19. Jupiter in conjunction with the Moon, 7h. 8m. morn. ♀ 3° 5' S.

May 20. Mean time of Sun's semidiameter passing the meridian, 1m. 73s.

May 24. A Total Eclipse of the Moon, partly visible as a Partial Eclipse at Greenwich, 5h. 34m. morn. (See p. 83.)

May 25. Mercury in inferior conjunction with the Sun, 5h. aft.

May 27. Venus at greatest distance from the Sun, 8h. aft.

May 28. Occultation of B.A.C. 6566, magnitude 5.7. The disappearance takes place at 6h. 16m. morn., 138° from the vertex; the reappearance at 1h. 28m. morn., 259° from the vertex.

May 29. Mars and Neptune in conjunction, 5h. 11m. aft. ♂ 1° 59' N.

May 30. Mercury at greatest distance from the Sun, 4h. morn.

In this month the Mornings increase 43m., and the Afternoons 43m.

MORNING AND EVENING STARS.

☿ MERCURY is an evening star till towards the end of the month, setting N.W. by W.

♀ VENUS is a morning star, rising at first nearly due E., afterwards E. by N.

♂ MARS is an evening star, setting N.W.

♃ JUPITER souths about 9h. a.m. Altitude about 38°.

♄ SATURN is a morning star, rising N.E. by E.

Towards the end of May we shall find the constellations Draco, Hercules, Ophiuchus, and Scorpio on the meridian about midnight.

Hercules contains a very splendid cluster of stars situated in R.A. 16h. 38m. and Decl. 36° 41' N. This, like most of the star-clusters, is condensed in the centre, and may be easily resolved with moderate telescopic aid; and a few days about the 9th, when the Moon is absent, it

may, if the opportunity is taken of a very clear night, be seen with the naked eye plainly between the stars ζ and η Herculis, rather nearer to η. This cluster, discovered by Halley in 1714, is one of the most beautiful examples of these bodies to be seen in the heavens. With the great Refractor of the Lick Observatory the nebulous glow at the centre has been resolved into separate points.

Mean Longitude of Moon's Ascending Node, June 1, 57° 45' 8.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

June 1. There is no real night in this month, but either daylight or twilight, the length of the Day being 16h. 14m.

June 4. Venus in conjunction with the Moon, *sh. 5am. aft.* ♀ 0° 13' N.

June 4. Saturn in conjunction with the Moon, *sh. 4am. aft.* ♀ 0° 2' N.

June 5. Mean time of Sun's semidiameter passing the meridian, *1m. 8.38.*

June 5. Venus and Saturn in conjunction, *1h. 44m. aft.* ♀ 0° 4' N.

June 6. Mercury in conjunction with the Moon, *1h. 4am. morn.* ♀ 4° 13' S.

June 9. Neptune in conjunction with the Moon, *sh. 3m. aft.* Neptune 4° 40' S.

June 10. Mars in conjunction with the Moon, *sh. 15m. morn.* ♂ 3° 6' S.

June 15. Jupiter in conjunction with the Moon, *1h. 56m. aft.* ♀ 3° 9' S.

June 18. Occultation of 8 Libæ: magnitude 5.4. The disappearance takes place at *10h. 42m. aft.* 113° from the vertex; the reappearance at *11h. 56m. aft.* 256° from the vertex.

June 18. Occultation of 4 Libæ: magnitude 2.3. The disappearance takes place at *10h. 51m. aft.* 116° from the vertex; the reappearance at *sh. 5m. morn.* on the 19th, 258° from the vertex.

June 20. Mercury at greatest elongation (23°) W., *sh. morn.*

June 20. Mean time of Sun's semidiameter passing the meridian, *1m. 8.78.*

June 20. Occultation of 9 Ophiuchi; magnitude 4.7. The disappearance takes place at *sh. 17m. aft.* 144° from the vertex; the reappearance at *10h. 34m. aft.* 266° from the vertex.

June 22. Sun enters the sign Cancer. Summer commences, *7h. 49m. morn.*

June 23. Occultation of B.A.C. 6294; magnitude 4.7. The disappearance takes place at *sh. 30m. morn.* 26° from the vertex; the reappearance at *1h. 9m. morn.* 324° from the vertex.

In this month the Mornings increase 2m.; the Afternoons 14 m.

MORNING AND EVENING STARS.

- ☿ MERCURY is a morning star, rising N.E. by E.
 ♀ VENUS is a morning star, rising at first E. by N., afterwards E.N.E.
 ♂ MARS is an evening star, setting N.W. by W.
 ♃ JUPITER is a morning star, rising E. by N., afterwards E.N.E.
 ♄ SATURN is a morning star, rising E.N.E.

In the last week of June the constellations Draco, Lyra, a portion of Hercules, Scutum Solideski, and a part of Sagittarius will south about midnight.

In Sagittarius there is a notable and very extensive Nebula, somewhat like a horseshoe in shape. It will be found in R.A. 18h. 15m., and Decl. 16° 15' S. The spectroscopic shows this Nebula to consist of a mass of incandescent gas. Professor Holden says that one arm of the Nebula has

changed its position since Herschel's time. In good weather can be well seen with a small telescope.

In Sagittarius, a little West and North of α , is a globular cluster of very minute stars, densely crowded, to be seen only with difficulty in small telescopes. Owing to its great southern declination there is but little chance of seeing it except when southing. Souths about midnight on June 25.

Mean Longitude of Moon's Ascending Node, July 1, 56° 10' 0".

WHITAKER'S ALMANACK, 1910.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

July 1. In this month there is no real night till after the 20th.

July 2. Saturn in conjunction with the Moon, 2h. 45m. morn. h. 0° 23' S.

July 4. Venus in conjunction with the Moon, 5h. 55m. morn. ♀ 2° 37' S.

July 5. Earth at greatest distance from the Sun, 1h. morn.

July 5. Mean time of Sun's semidiameter passing the meridian, 1m. 8' 48".

July 5. Mercury in conjunction with the Moon, 5h. 54m. aft. ♀ 3° 8' S.

July 7. Neptune in conjunction with the Moon, 4h. 38m. morn., Neptune 4° 40' S.

July 8. Mars in conjunction with the Moon, 2h. 11m. aft. ♂ 3° 53' S.

July 12. Neptune in conjunction with the Sun, 7h. morn.

July 13. Jupiter in conjunction with the Moon, 2h. 11m. morn. ♀ 2° 58' S.

July 13. Mercury at least distance from the Sun, 4h. morn.

July 16. Mercury and Neptune in conjunction, 8h. 4m. morn. ♀ 10° 54' N.

July 19. Mercury in superior conjunction with the Sun, 4h. aft.

July 20. Mean time of Sun's semidiameter passing the meridian, 1m. 7' 58".

July 21. Uranus in conjunction with the Moon, 9h. 6m. aft. Uranus 3° 44' N.

July 23. Mars at greatest distance from the Sun, 5h. morn.

July 29. Saturn in conjunction with the Moon, 12h. 28m. aft. h. 0° 52' S.

There are no occultations of stars as bright as the 6th magnitude in the month of July.

In this month the Mornings decrease 35m., and the Afternoons 25m.

MORNING and EVENING STARS.

☿ MERCURY is a morning star in first half of the month, rising N.E. by E. An evening star at end of month, setting N.W. by W.
 ♀ VENUS is a morning star, rising N.E. by E.
 ♂ MARS is an evening star, setting N.W. by W.
 ♃ JUPITER is an evening star, setting a little S. of W.
 ♄ SATURN rises shortly after midnight, E.N.E., in the beginning of the month.

is in the middle of July the constellations Cygnus, Vulpecula, Aquila, and Sagittarius will be on the meridian about midnight.

The Annular Nebula in Lyra, situated between β and γ , is the best example of the Annular Nebula; the heavens containing, as far as is at present known, comparatively few examples of this class. It requires a rather good telescope to see it well: it is in R.A. 18h. 50m. and Decl. $32^{\circ} 54'$ N. It

exhibits a spectrum as if composed of an incandescent gas. There is also a globular cluster in Lyra, as nearly as possible midway between γ Lyrae and β Cygni. It is in R.A. 19h. 13m., Decl. $30^{\circ} 1'$ N. The best nights for the observation of these objects are those just before and after the 6th.

Uranus may be well observed in this month. See p. 94.

ECLIPSES, OCCULTATIONS AND OTHER CELESTIAL PHENOMENA.

August 1. Day breaks at 1h. 32m. *morn.*, and Twilight ends at 10h. 42m. *aft.*, the length of the Day being 15h. 24m.

Aug. 2. Venus in conjunction with the Moon, 11h. 18m. *aft.* 4° 8' S.

Aug. 3. Neptune in conjunction with the Moon, 2h. 58m. *aft.* Neptune 4° 45' S.

Aug. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 6' 18".

Aug. 6. Mercury and Mars in conjunction, 6h. 14m. *morn.* 0° 5' N.

Aug. 6. Mars in conjunction with the Moon, 6h. 50m. *aft.* 4° 11' S.

Aug. 6. Mercury in conjunction with the Moon, 1h. 26m. *aft.* 4° 7' S.

Aug. 9. Jupiter in conjunction with the Moon, 6h. 25m. *aft.* 2° 34' S.

Aug. 11. Venus and Neptune in conjunction, 6h. 46m. *morn.* 0° 27' N.

Aug. 17. Occultation of B.A.C. 6666; magnitude 5.7. The disappearance takes place at 10h. 55m. *aft.*, 92° from the vertex; the reappearance at 6h. 3m. *morn.*, on the 18th at 210° from the vertex.

Aug. 20. Occultation of 35 Capricorn; magnitude 6.0. The disappearance takes place at 1h. 4m. *morn.*, 83° from the vertex; the reappearance at 2h. 1m. *morn.*, 186° from the vertex.

Aug. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 4' 9".

Aug. 25. Saturn in conjunction with the Moon, 5h. 46m. *aft.* 1° 18' S.

Aug. 28. Occultation of 7 Tauri; magnitude 4.3. The disappearance takes place at 2h. 11m. *morn.*, 159° from the vertex; the reappearance at 2h. 54m. *morn.*, 242° from the vertex.

Aug. 30. Mercury at greatest elongation (27°) E., 11h. *aft.*

In this month the Mornings decrease 47m., and the Afternoons 59m.

MORNING AND EVENING STARS.

☿ MERCURY is an evening star, setting at first W.N.W., afterwards W. by N., and at end of month due W.

♀ VENUS is a morning star, rising N.E. by E.

♂ MARS is an evening star, setting in first half of the month, W.N.W.; later, W. by N.

♃ JUPITER is an evening star, setting W. by S.

♄ SATURN rises about 10h. in the evening, E.N.E. Stationary on the 20th, at *gh. morn.*

At the beginning of August, Cepheus, Cygnus, Vulpecula, Delphinus, and Capricornus south at midnight.

In Vulpecula, 31° due north of γ Sagittae, is the "Dumb-bell" Nebula, generally considered irresolvable, although under the higher powers of Lord Rosse's telescope there seemed some trace of resolvability shown. It is situated in R.A. 19^h , 55^m , and Decl. 22° $26'$ N., and gives a spectrum of bright lines.

There is a little bright globular cluster, 4° due south of ϵ Delphini, consisting of a mass of very small stars, not easy for small telescopes; ϵ Delphini is situated in R.A. 20^h , 28^m , 55^s , and Decl. 11° $0'$ N.—a tiny star, 9^{th} mag. precedes it. This though a small is yet a bright cluster, and may be observed easily on the evenings immediately before and after the 5th of this month. Uranus and Pallas may be observed in this month. See p. 54.

Mean Longitude of Moon's Ascending Node, September 1, 52° 52' E.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

September 1. Day breaks at 3h. 7m. morn., and Twilight ends at 8h. 53m. aft., the length of the Day being 13h. 34m.

Sept. 1. Venus in conjunction with the Moon, 8h. 3m. aft. 9° 42' 26" S.

Sept. 5. Mean time of Sun's semidiameter passing the meridian, 11m. 40s.

Sept. 14. Occultations of α Sagittarii; magnitude 4.8, and A Sagittarii; magnitude 4.9. The disappearances take place at 6h. 5m. aft. and 7h. 56m. aft., 68° and 72° from the vertex respectively; the reappearances at 7h. 23m. aft., and 9h. 15m. aft., 285° and 256° from the vertex respectively.

Sept. 17. Occultations of γ Aquarii; magnitude 5.6, and γ Aquarii; magnitude 4.4. The disappearances take place at 9h. 30m. aft., 105° from the vertex, and 10h. 50m. aft., 57° from the vertex, respectively; the reappearances at 10h. 32m. aft., 211° from the vertex, and 9h. 2m. morn., of the 18th, 229° from the vertex, respectively.

Sept. 20. Mean time of Sun's semidiameter passing the meridian, 11m. 38s.

Sept. 20. Occultation of μ Piscium; magnitude 5.0. The disappearance takes place at 11h. 58m. aft., 52° from the vertex; the reappearance at 1h. 1m. morn., on the 21st, at 264° from the vertex.

Sept. 23. Sun enters sign Libra. Autumn commences 10h. 31m. aft.

Sept. 23. Occultation of 56 Tauri; magnitude 5.2. The disappearance takes place at 10h. 58m. aft., 169° from the vertex; the reappearance at 11h. 28m. aft., 230° from the vertex.

Sept. 24. Occultations of α Tauri, υ Tauri, and υ Tauri, the respective magnitudes being 4.1, 4.2, and 5.4. The disappearances at 1h. 43m. morn., 2h. 13m. morn., and 2h. 59m. morn., at 174°, 69°, and 35° from the vertex respectively; the reappearances at 2h. 5m. morn., 3h. 14m. morn., and 3h. 35m. morn., 229°, 228°, and 317° from the vertex respectively.

In this month the Mornings decrease 46m., and the Afternoons 2h. 6m.

MORNING AND EVENING STARS.

♿ MERCURY is an evening star at the beginning of the month, setting W. by S.

♀ VENUS is a morning star, rising at first E.N.E., afterwards E. by N.

♂ MARS is too near the sun for observation in this month.

♃ JUPITER is an evening star, setting W. by S.

♄ SATURN rises soon after sun-set, E.N.E., in conjunction with the moon on the 21st at 11h. 30m. aft. h. 1° 31' S.

On the 1st of September, Cepheus, Pegasus, Aquarius, and Pisces Australis will be on the meridian at midnight.

In Pegasus is a fine globular cluster of very small stars, $2\frac{1}{2}'$ in diameter, $4\frac{1}{2}'$ north-west of ϵ Pegasi, much condensed towards the centre, where the stars cannot be resolved; there are many telescopic and several rather bright stars in the field. Aquarius contains a fine cluster of stars, condensed in the centre, and presenting a true globular form, consisting of very small

stars very much compressed. It is situated in R.A. 21h. 28m. and Decl. 1° 20' S.

In the early evening at the beginning of the month, the bright cluster in Capricornus, situated in R.A. 21h. 35m. and Decl. 23° 40' S., can be observed. The best evenings for observation are those immediately before and after the 3rd and end of the month.

Ceres and Pallas can be observed in this month, see p. 94.

PHASES OF THE MOON.

- New Moon 3d. 8h. 32m. Morning.
 - First Quarter 11 1 40 Afternoon.
 - Full Moon 18 2 24 Afternoon.
 - Last Quarter 25 5 48 Morning.
- Apogee 7th. 7h. M. 252,000.
Perigee 19th. 3h. A. 223,000.

RAIN FELL IN OCTOBER, 1909,
on 29 days; total fall, 4'06 inches; above the
average, 1847-90, by 1'25 inch.

MONTHLY NOTES.

October 1. Revising Barristers must complete revision of all lists of voters by 12th.—Pheasant shooting begins.—Common Lodging-houses to be whitewashed in the first week.

- 5. Dividends due. 9. Various Licences expire.
- 14. Fire Insurances must be paid.
- 17. Quarter Sessions begin.
- 24. Borough Councillors to be nominated.

Owing to Jupiter's proximity to the Sun the Satellites will not be visible till November 18.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

October 1. Day breaks at 4h 8m. morn., and Twilight ends at 7h. 32m. a.h., the length of the Day being 11h. 39m.

Oct. 5. Mean time of Sun's semi-diameter passing the meridian, 1m. 43s.

Oct. 7. Occultation of δ Scorpii; magnitude 2.5. The disappearance takes place at 5h. 6m. a.h., 92° from the vertex; the reappearance at 6h. 23m. a.h., 250° from the vertex.

Oct. 11. Mercury at greatest elongation (18°) West, 5h. a.h.

Oct. 13. Occultation of γ Capricorni; magnitude 6.0. The disappearance takes place at 5h. 5m. a.h., 18° from the vertex; the reappearance at 6h. 0m. a.h., 279° from the vertex.

Oct. 19. Occultation of α Arctis; magnitude 5.5. The disappearance takes place at 8h. 16m. a.h., 85° from the vertex; the reappearance at 9h. 12m. a.h., 204° from the vertex.

Oct. 20. Mean time of Sun's semi-diameter passing the meridian, 1m. 54s.

Oct. 21. Occultation of γ Tauri; magnitude 6.0. The disappearance takes place at 6h. 43m. a.h., 173° from the vertex; the reappearance at 10h. 13m. a.h., 236° from the vertex.

Oct. 22. Occultation of γ Leonis; magnitude 4.7. The disappearance takes place at 8h. 13m. a.h., 110° from the vertex; the reappearance at 9h. 3m. a.h., 302° from the vertex.

Oct. 25. Occultation of λ Cancri; magnitude 5.9. The disappearance takes place at 4h. 11m. morn., 189° from the vertex; the reappearance at 4h. 54m. morn., 248° from the vertex.

Oct. 27. Occultation of η Leonis; magnitude 3.6. The disappearance takes place at 2h. 44m. morn., 144° from the vertex; the reappearance at 3h. 51m. morn., 335° from the vertex.

Oct. 28. Venus and Jupiter in conjunction, 10h. 52m. morn., 5° 11' N.

Oct. 30. Mercury and Jupiter in conjunction, 1h. 16m. morn., 0° 21' N.

Oct. 31. Mars in conjunction with the Moon, 11h. 28m. a.h., 0° 39' S.

In this month the Mornings decrease 52m., and the Afternoons 2h. 3m.

1	27	49.4	88	49 41
10	27	52.4	88	49 44
19	27	53.1	88	49 48
28	27	52.9	88	49 51

MORNING AND EVENING STARS.

☿ MERCURY is a morning star, rising, at first, E., afterwards E. by S.

♀ VENUS is a morning star, rising E., and later in the month E. by S.

♃ MARS is a morning star, rising E. by S.

♃ JUPITER rises too near the Sun for observation in this month.

♄ SATURN rises in the early evening, E. by N.

On the 1st of October, Cassiopeia, Andromeda, Pegasus, and Cetus are on the meridian at midnight; while Cancer and Orion are rising, and Hercules and Capricornus setting.

In Andromeda, near to the 4th mag. star ν , is a large and irresolvable Nebula in the form of an elongated ellipse. It is situated in R.A. 0^h 37m. and Decl. 40° 40' N. In Sept., 1885, a decided stellar nucleus was observed in R.A. 0^h 36m. 31s., Decl. 40° 38' N., probably unconnected with the Nebula. Very many minute stars can be seen within the Nebula.

A fine double cluster of stars, situated midway on a line joining α Persei and γ Cassiopeia, may be observed in this month. The northern cluster is a magnificent collection of stars, $30'$ in diameter, ranging in magnitude from the 6th to 14th. The smaller southern cluster, $15'$ in diameter, is less rich in stars, and much condensed toward the centre. On fine nights, at beginning and end of the month, these objects afford one of the most beautiful subjects for observation.

Ceres and Vesta may be observed in this month. See p. 94.

RAIN FELL IN NOVEMBER, 1908,

on 12 days; total fall, 0.75 inch; below the average, 1841-90, by 1.52 inches.

MONTHLY NOTES.

- November 1. Latest day for receiving corrections for Whitaker's Almanack.
 - Salmon-fishing with rod and line ends.—
 - Ordinary day of election of Borough Councillors.
 - Holiday at London Stock Exchange.
 - Fox-hunting begins.
 9. Mayors and Aldermen of Boroughs to be elected and Sheriffs appointed.
 11. Martinmas: Scottish Quarter Day.
 12. County Sheriffs for next year nominated.
 15. Solicitors, notaries, proctors, and sworn clerks' certificates expire. See Note, Dec. 15.

Owing to Jupiter's proximity to the Sun, the Satellites will not be visible till the 18th.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

November 1. Day breaks at 5h. 1m. morn., and Twilight ends at 6h. 27m. aft., the length of the Day being 9h. 40m.

Nov. 2. A Partial Eclipse of the Sun, at 9h. morn., invisible at Greenwich. (See p. 83.)

Nov. 5. Mean time of Sun's Semidiameter passing the meridian, 1m. 7.18.

Nov. 11. Occultations of γ and η Aquarii; magnitudes 5.6 and 4.4 respectively. The disappearances take place at 5h. 4m. aft., 74° from the vertex, and 6h. 46m. aft., 16° from the vertex, respectively; the reappearances at 6h. 18m. aft., 259° from the vertex, and 7h. 36m. aft., 234° from the vertex, respectively.

Nov. 13. Occultation of λ Ceti; magnitude 5.4. The disappearance takes place at 9h. 31m. aft., 338° from the vertex; the reappearance at 9h. 55m. aft., 233° from the vertex.

Nov. 14. Occultation of μ Piscium; magnitude 5.0. The disappearance takes place at 9h. 43m. aft., 59° from the vertex; the reappearance at 10h. 51m. aft., 221° from the vertex.

Nov. 17. A Total Eclipse of the Moon, at 21m. morn., visible at Greenwich. (See p. 83.)

Nov. 17. Occultations of ν and ν^2 Tauri; magnitudes 4.2 and 5.4 respectively. The disappearances take place at 8h. 37m. aft., 75° from the vertex, and 9h. 17m. aft., 49° from the vertex, respectively; the reappearances at 9h. 28m. aft., 322° from the vertex, and 9h. 49m. aft., 345° from the vertex, respectively.

Nov. 18. Occultations of ι and ν^2 Tauri; magnitudes 5.4 and 5.7 respectively. The disappearances take place at 7h. 23m. aft., 156° from the vertex, and 11h. 35m. aft., 119° from the vertex, respectively; the reappearances at 8h. 4m. aft., 258° from the vertex, and 9h. 44m. morn. of 19th, 273° from the vertex, respectively.

Nov. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 8.95.

In this month the Mornings decrease 49m., and the Afternoons 39m.

28	1 27	41.7	88	50	2

MORNING AND EVENING STARS.

- ☿ MERCURY too near the Sun for observation in this month. In conjunction with Venus, 2d. 8h. 57m. *morn.* ☿ 0° 10' S.
- ♀ VENUS rises and sets too nearly with the Sun for observation.
- ♂ MARS is a morning star, rising E.S.E.
- ♃ JUPITER is a morning star, rising E.S.E.
- ♄ SATURN souths between 10h. and 11h. *aft.* In conjunction with the Moon on the 15th at 2h. 2m. *aft.* ♄ 1° 13' S.

On the 1st of November, Perseus, Aries, and Cetus are on the meridian at midnight.

An irresolvable Nebula 2½° to the East of γ Andromedæ may be observed in this month. It was discovered by Miss Herschel, with a small reflecting telescope of twenty-seven inches in focal length. It is a very elongated Nebula, 15'

long by 3' broad, with a cleft, dark in the middle, and suggests the idea of a vast flat ring seen very obliquely. It is in R.A. 2h. 16m. and Decl. 42° 49' N. The best evenings for observing it are those about the beginning and end of the month.

Ceres and Vesta can be observed in this month. See p. 94.

Mean Longitude of Moon's Ascending Node, December 1, 48° 3' 8".

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

December 1. Day breaks at 5h. 41m. morn., and Twilight ends at 5h. 57m. aft., the length of the Day being 8h. 10m.

Dec. 2. Mercury in conjunction with the Moon, 10h. 5m. aft. ♀ 0° 49' N.

Dec. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 10.38.

Dec. 13. Occultation of ♂ Arctis; magnitude 5.5. The disappearance takes place at 6h. 50m. aft., 117° from the vertex; the reappearance at 7h. 50m. aft., 234° from the vertex.

Dec. 14. Occultation of 13 Tauri; magnitude 5.6. The disappearance takes place at 3h. 28m. aft., 40° from the vertex; the reappearance at 3h. 48m. aft., 353° from the vertex.

Dec. 16. Occultation of 139 Tauri; magnitude 4.7. The disappearance takes place at 5h. 6m. aft., 112° from the vertex; the reappearance at 5h. 57m. aft., 302° from the vertex.

Dec. 18. Occultation of ♀ Cancri; magnitude 5.9. The disappearance takes place at 9h. 3m. aft., 149° from the vertex; the reappearance at 10h. 2m. aft., 308° from the vertex.

Dec. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 11.08.

Dec. 22. Sun enters the sign Capricornus, 5h. 12m. aft., Winter commences.

Dec. 24. Mercury at greatest elongation (20°) E., 7h. aft.

Dec. 24. Occultation of ♀ Virginis; magnitude 2.9. The disappearance takes place at 4h. 30m. morn., 187° from the vertex; the reappearance at 4h. 23m. morn., 307° from the vertex.

Dec. 26. Occultation of ♀ Virginis; magnitude 4.5. The disappearance takes place at 6h. 46m. morn., 122° from the vertex; the reappearance at 8h. 5m. morn., 318° from the vertex.

Dec. 28. Mars in conjunction with the Moon, 10h. 13m. aft. ♂ 1° 38' N.

In this month the Mornings decrease 24m., and the Afternoons increase 4m.

MORNING AND EVENING STARS.

☿ MERCURY is an evening star, setting S.W.
 ♀ VENUS is an evening star, setting S.W.
 ♂ MARS is a morning star, rising S.E. by E.
 ♃ JUPITER is a morning star, rising E.S.E. In conjunction with the Moon on the 26th, 2h. 27m. *alt.* 1° 6' 16".
 ♄ SATURN is souths in the evening, about 47° altitude. In conjunction with the Moon on the 13th, at *gh.* 56m. *alt.* 1° 2' 2".

On the 1st of December, at midnight, the constellations Camelopardus, Taurus, and Eridanus will be on the meridian.

In Taurus is a fine Nebula of a pearly white colour 1½° North-west of ζ Tauri. Lord Rosse compared its appearance to that of a crab, and it is generally known as the "Crab Nebula."

About the middle of December Orion souths

at midnight, and can be best observed in this month.

This magnificent constellation contains the grandest of all the Nebulae, situated in the Sword-Scabbard. A line drawn from α Orious through γ, the third star of the belt, will pass over θ Orionis and the Nebula. It can be seen with the naked eye on any clear night. Evenings about the 1st and 31st are the best.

Perpetual Calendar

FROM THE COMMENCEMENT OF THE CHRISTIAN ERA.

By which the day of the week of any year can easily be ascertained.

BY COLONEL F. W. M. SPRING, late Royal Artillery.

RULE.—To the day of the Month, add Factors for Month, Century, and Year, and divide the total by 7.

If there is no remainder, the day is Sunday.
 If 1 is the remainder Monday.
 " 2 " Tuesday.
 " 3 " Wednesday.
 " 4 " Thursday.
 " 5 " Friday.
 " 6 " Saturday.

Should the total be less than 7, it is to be taken as a remainder

EXAMPLE.

Date of the Battle of Waterloo 18 June, 1815.

Factors for

Day. Month. Century. Year.

18 + 6 + 0 + 4 = 28

28 divided by 7 leaves no remainder, therefore the day was Sunday.

MONTHS.

For Leap years figures in heavier type to be taken.

Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sep.	Oct.	Nov.	Dec.
3	5	1	1	3	6	1	4	6	2	5	0
4											

Factors.

CENTURIES (Cardinal Numbers).

The year 00 of Centuries in heavier type was, or will be, a Leap year.

OLD STYLE, ended in England 2 Sept., 1752—a Wednesday.

NEW STYLE, began in England 14 Sept., 1752—a Thursday.

and every succeeding fourth Century.

Factors.

Factors.

YEARS.

Leap years in heavier type.

Tidal Constants.

WITH THE RISE OF TIDE AT SPRINGS AND NEAPS.

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the Time of High Water at London Bridge, and adding to or subtracting therefrom the quantities annexed.

NOTE.—The time thus found will be Greenwich Time for British, Belgian and Dutch Ports; Dublin Time for Irish Ports, and Paris Time for French Ports.

EXAMPLE 1.—Required the time of high water at Aberdeen on January 5th:—

Time of high water at London Bridge 8h. 30m. Morn.
 Subtract tide interval

Time of high water at Aberdeen 7 40 Morn.

EXAMPLE 2.—Required the time of high water at Scarborough on January 7th:—

Time of high water at London Bridge 10h. 42m. Morn.
 Add tide interval

Time of high water at Scarborough .. 11 57 After.

It may happen that the "tide interval" to be subtracted is greater than the quantity from which it has to be

taken, in which case 12 hours must be added to the London Bridge time; the resulting difference will be the preceding day's afternoon tide where the London morning tide was used. Sometimes the sum "high water at London Bridge + "tide interval" will exceed 12 hours; in this case, the excess will be the time of high water after the noon or midnight following, according as the London high water was either morning or afternoon.

EXAMPLE 3.—Required the time of high water at Aberdeen, January 8th aft.:—

Time of high water at London Bridge
 on January 5th + 12 hours .. 12h 11m. Morn.
 Subtract tide interval

Time of high water at Aberdeen, Jan. 8th 11 21 After.

Previous to 1752 the above dates are computed from the Old Style. Those printed in heavier type are leap-years. 1752 had E D up to September 2, but A from September 14 to December 31, the intermediate days being dropped for the change of Style. Its Easter was the last in Old Style. Until then also the years were considered to begin on March 25; but that, as it did

not affect the date of Easter, is not noticed in this Table. The Table of Moveable Feasts in the Prayer-Book gives all the others after finding Easter in this. The Sunday Letters in the Calendar then enable any one to count the days of the week from Sunday. The tables in modern Prayer-Books are calculated for the New Style only. * Old Style. † New Style.

The French Republican Calendar.

THIS, although reckoned from the 22nd September, 1792, was not introduced until the 22nd November, 1793. It remained in use only till the 31st December, 1805. The Gregorian Calendar was restored January 1st, 1806 (Nivôse 10, Year XIV.). The months varied in different years, thus Nivôse 2 commenced December 21st in 1793, December 22nd in 1795, December 21st in 1796, December 22nd in 1799, December 23rd in 1803, and December 22nd in 1804 and 1805. The following are the dates for the year 1804, the last complete year of the Calendar:—

Vendémiaire (<i>Vintage</i>), 23 Sept. to Oct. 22	Germinal (<i>Budding</i>), 22 Mar. to Apr. 21
Brumaire (<i>Foggy</i>), 23 Oct. to Nov. 22	Floréal (<i>Flourery</i>), 21 April to May 20
Frimaire (<i>Sleety</i>), 22 Nov. to Dec. 21	Prairial (<i>Pasture</i>), 21 May to June 20
Nivôse (<i>Snowy</i>), 22 Dec. to Jan. 21	Messidor (<i>Harvest</i>), 20 June to July 19
Pluviose (<i>Rainy</i>), 21 Jan. to Feb. 20	Thermidor (<i>Hot</i>), 20 July to Aug. 19
Ventôse (<i>Windy</i>), 20 Feb. to Mar. 21	Fructidor (<i>Fruit</i>), 19 Aug. to Sept. 18

The months were divided into three decades of ten days each, but to make up the 365, five were added at the end of September; (*Primidi*), dedicated to Virtue; (*Duodi*) to Genius; (*Tridi*) to Labour; (*Quartidi*) to Opinion; and the 5th (*Quintidi*) to Rewards. To Leap Year, called *Omnique*, a sixth day, the 22nd or 23rd September (*Sextidi*), "Jour de la Révolution," was added. This variation of dates has led to considerable confusion, but those who may wish to trace the fourteen years will find some very elaborate tables in the English edition of Bourrienne's "Life of Napoleon": Bentley.

70 Calendar of First and Second Proper Lessons

APPOINTED FOR SUNDAYS AND OTHER HOLY DAYS THROUGHOUT THE YEAR.

The Athanasian Creed to be read on the days marked*.			MORNING PRAYER.		EVENING PRAYER.	
			First Lesson.	Second Lesson.	First Lesson.	Second Lesson.
Jan.	1	Circumcision...	Genesis 22, v. 9	Romans 2, v. 17	Deuter. 10, v. 12	Coloss. 2, v. 8 to 16
"	6	I. S. after Xmas...	Isaiah 40, v. 1-11	Matt. 23, v. 1-23	Isaiah 40, v. 1-11	John 12, v. 1-12
"	9	I. S. after Epiph.	Isaiah 52, v. 13 to 24	Isaiah 52, v. 13 to 24	Isaiah 52, v. 13 to 24	John 12, v. 1-12
"	11	I. S. after Epiph.	Isaiah 52, v. 13 to 24	Isaiah 52, v. 13 to 24	Isaiah 52, v. 13 to 24	John 12, v. 1-12
"	12	King's Accession	Isaiah 52, v. 13 to 24	Isaiah 52, v. 13 to 24	Isaiah 52, v. 13 to 24	John 12, v. 1-12
Proper Psalms			Or Prov. 8, v. 17	Or Rev. 21, v. 22 to 23	Or Prov. 8, v. 17	Or Rev. 21, v. 22 to 23
"	23	Septuagesima...	Genesis 12, v. 1 to 9	Rev. 21, v. 22 to 23	Genesis 12, v. 1 to 9	Rev. 21, v. 22 to 23
"	24	Conv. of St. Paul	Isaiah 49, v. 1 to 13	Galatians 1, v. 11	Isaiah 49, v. 1 to 13	Acts 26, v. 1 to 23
"	30	Sexagesima...	Genesis 12, v. 1 to 9	Matt. 16, v. 24 to 27	Genesis 12, v. 1 to 9	Acts 26, v. 1 to 23
Feb.	2	Purific. of B. V. M.	Exodus 13, v. 1 to 17	Matt. 28, v. 1 to 19	Haggai 2, v. 1 to 10	Acts 26, v. 1 to 23
"	6	Quinquagesima	Genesis 9, v. 1 to 17	Matt. 21, v. 1 to 23	Genesis 9, v. 1 to 17	Acts 26, v. 1 to 23
"	9	Ash Wednesday	Isaiah 58, v. 1 to 13	Mark 2, v. 13 to 23	Isaiah 58, v. 1 to 13	Heb. 12, v. 1 to 16
Proph. 2, v. 32, 38			Gen. 12, v. 1 to 9	Matt. 24, v. 1 to 23	Genesis 12, v. 1 to 9	Acts 26, v. 1 to 23
"	13	I. S. Lent Quadrage	Genesis 27, v. 1 to 31	Matt. 27, v. 1 to 51	Genesis 27, v. 1 to 31	Romans 8, v. 1 to 16
"	24	St. Matthias...	1 Sam. 2, v. 27 to 36	Mark 1, v. 1 to 21	Isaiah 52, v. 13 to 24	Romans 8, v. 1 to 16
"	27	III. Sun. in Lent	Genesis 3, v. 1 to 22	Mark 3, v. 1 to 23	Genesis 3, v. 1 to 22	Romans 8, v. 1 to 16
Mar.	6	IV. Sun. in Lent	Genesis 3, v. 1 to 22	Mark 7, v. 1 to 24	Genesis 3, v. 1 to 22	Romans 8, v. 1 to 16
"	13	Passion Sun.	Exodus 3, v. 1 to 22	Mark 11, v. 1 to 27	Exodus 3, v. 1 to 22	1 Corinthians 6, v. 1 to 11
"	20	VI. S. in Lent	Exodus 3, v. 1 to 22	Matthew 26, v. 1 to 28	Exodus 3, v. 1 to 22	Luke 19, v. 28 to 44
"	21	Mon. before East.	Lam. 1, v. 1 to 23	John 14, v. 1 to 15	Lam. 1, v. 1 to 23	John 14, v. 1 to 15
"	22	Tues. before East.	Lam. 1, v. 1 to 23	John 14, v. 1 to 15	Lam. 1, v. 1 to 23	John 14, v. 1 to 15
"	23	Wed. before East.	Lam. 1, v. 1 to 23	John 14, v. 1 to 15	Lam. 1, v. 1 to 23	John 14, v. 1 to 15
"	24	Thurs. before East.	Hos. 1, v. 1 to 17	John 14, v. 1 to 15	Hos. 1, v. 1 to 17	John 14, v. 1 to 15
"	25	Good Friday	Genesis 22, v. 1 to 19	John 14, v. 1 to 15	Genesis 22, v. 1 to 19	John 14, v. 1 to 15
Pr. Ps. 22, 40, 54			Genesis 3, v. 1 to 22	Luke 23, v. 1 to 50	Isa. 52, v. 13 to 24	Romans 6, v. 1 to 14
"	26	Annu. of V. M.	Genesis 3, v. 1 to 22	Luke 23, v. 1 to 50	Isa. 52, v. 13 to 24	Romans 6, v. 1 to 14

Standard Time.

It is well known that the "time of day" differs everywhere except in places on the same meridian, the difference in local times being caused by the rotation of the Earth on its axis from West to East in each twenty-four hours; and as the globe is divided astronomically into 360° of longitude, reckoned by us from the meridian of Greenwich, 180° to the East and 180° to the West, it is easily seen that each 15° is equal to one hour of time.

The notice, "London (Greenwich) time observed at all stations," formerly so familiar to the travellers by railway, was really the introduction to the use of *Standard Time*, and was inevitable when railway time-tables were printed; but in a country so large as the Dominion of Canada, which extends over 20° of longitude, as also in the United States with nearly 60°, it soon became absolutely necessary to minimise the great inconvenience, and so the use of *Standard Time* was made legal.

By *Standard Time* is meant that the hour of each 15° of longitude becomes the local mean time for the zone or belt extending 7½° on each side of the central meridian; though in practice the zone has to be adapted to local circumstances, and so cannot conform to the exact line or meridian, but is arranged to suit boundaries of States or Provinces as may be most convenient. By way of illustration, it may be noted that in the Province of Ontario, Canada, by Act of the Legislature, the hour of 75° W. is *Standard Time* for the Province as far as 82½° W., and that the S.W. point, 83° W., extends westerly beyond the eastern part of the State of Michigan, where the time of 90° W. is used; so at Windsor, Ontario, it is noon while in Michigan—more to the east—it is 11 A.M. The *Standard Time* as used in

the chief cities of Canada and the United States may be noted: at Quebec, Montreal and Toronto, at Boston, New York and Washington, the time of 75° W., five hours earlier than Greenwich, is used; at Winnipeg in Manitoba, and at Detroit, Chicago and New Orleans, the time of 90°, six hours earlier than Greenwich, is used; at Regina and Denver it is the time of 105°, seven hours earlier than Greenwich; and in British Columbia and at San Francisco the time of 120° W., eight hours earlier than Greenwich, is used; and when 180° is reached another day begins in Eastern Siberia, at the Fiji Islands, and a little to the east of New Zealand.

The same rule applies to places east of Greenwich, where, of course, noon is earlier than at Greenwich according to the longitude. Spain adopted *Standard*—that is, Greenwich—Time early in the century. When noon at Greenwich it is 2 P.M. in Egypt and South Africa; it is 6 P.M. at Calcutta, 82½° E.; in Japan, 135° E., it is 9 P.M.; and in Eastern Australia, 150° E., it is 10 P.M.

The question has been asked very often, "Where does a day begin?"—that is, any special day, New Year's Day or Easter Day—and the answer is that for all peoples, nations, and languages, using maps with longitude East and West from Greenwich, each day begins at the meridian of 180°, slightly east of New Zealand in the South, and intersecting Eastern Siberia in the North, and so the last day of the nineteenth century and the first day of the twentieth were on the Earth together, not running concurrently or side by side, north and south of the Equator, as has been supposed, erroneously, but the latter following the former from 180° westerly to Greenwich, and on again to 180°, where it gave place to January 2nd.

TWELVE O'CLOCK NOON GREENWICH MEAN TIME, AS COMPARED WITH THE CLOCK IN THE FOLLOWING PLACES.

* Peculiar to Russia.

Julian Calendar.

IN the Roman (Julian) Calendar the months corresponded exactly with our own, excepting that down to the time of the great Emperor Augustus, the fifth and sixth months of the year—which, with the Romans, began with March—were called Quintilis and Sextilis; afterwards they were named in honour of the emperors Julius and Augustus.

In reckoning the days of each month three fixed points were taken, and any particular day was said to be so many days *before* the next coming fixed day. These three points were (1) the Kalends, by which name the first of each month was known; (2) the Nones, which fell on the seventh day of the month in March, May, July, and October, and on the fifth day in each of the other months; and the Ides, which always fell eight days after the Nones.

For example, the 1st of January was the Kalends of January (*Kalendis Januariis*), the 31st of December was the day before the Kalends of January (*pridie Kalendas Januariis*); but Dec. 30th was the third day before the Kalends of January (*ante diem tertium Kalendas Januariis*), in this case both Jan. 1st and Dec. 31st being included in the reckoning. And so on back to Dec. 14th, which was the nineteenth day before the January Kalends (*ante diem undeciesimum Kal. Jan.*), Dec. 13th being *Idibus Decembribus*, the Ides of December. In Leap-year, both Feb. 24th and Feb. 25th were known as the sixth day before the March Kalends, being distinguished respectively as *prior* and *posterior*.

Table for Finding the Times of Sunrise and Sunset.

This double entry table provides the means for finding, with sufficient accuracy for all practical purposes, the times of sunrise and sunset for any place situated between latitudes 1° and 66°.

To use the table: With the Sun's declination, in the first column, and under the required latitude on the horizontal line, will be found the apparent time of sunset. Subtracting the time so found from 12h. will give the apparent time of sunrise. To obtain the mean or clock time, the numbers in the column headed *before* or *after* clock (which will be found on the second page of each month), giving the difference in time between the mean and true sun for each

day in the year, must be applied to the apparent times of sunrise and sunset, as the particular case may require; that is to say, if the true sun is *before* the clock the equation of time must be subtracted from the apparent to obtain the mean or clock time, and if *after*, added.

The table is arranged for northern latitudes, but will serve equally well for places south of the Equator by changing the declination from North to South and *vice versa*.

If the time of sunrise or sunset should be required for any declination or latitude falling between the arguments in the table, these times may easily be found by simple proportion.

DECLINATION.	LATITUDE.

3 40	-0 58 33+	15 40	7 40	+0 3 58-	19 40	11 40	+1 2 30-	23 40
3 50	-0 56 49+	15 50	7 50	+0 7 1-	19 50	11 50	+1 3 49-	23 50
4 0	-0 54 58+	16 0	8 0	+0 10 3-	20 0	12 0	+1 5 1-	24 0

It will be observed that the sign on the left-hand side of the correction is to be used when the argument is on the left, and *vice versa*; + means that the correction is to be added to the reduced altitude, and - that it is to be subtracted.

				30	4	93	60	60	9' 86	30	30' 08

To obtain the Sidereal Time corresponding to a given Mean Solar Time, we must take, from the second page of the month, the preceding Sidereal Time at Mean Noon, and add to it the Sidereal Equivalents corresponding to the hours, minutes, and seconds of the given Mean Time. Should the sum come out more than twenty-four hours, that amount must be subtracted from it. As an example, let the Sidereal Time corresponding to the Mean Time of May 20, 9h. 38m. 0s., be required:—

Sidereal Time at Mean Noon, on May 20	H. M. S.
Mean Time intervals and Sidereal Equivalents.....	3 49 3
9h. =	9 1 28' 72
38m. =	38 6' 24
0s. =	0' 00
Corresponding Sidereal Time	= 13 28 37' 95

This Table may also be used to show the acceleration of Sidereal on Mean Solar intervals by subtracting the Mean Time arguments from their sidereal equivalents.

TO CHANGE INTERVALS OF SIDEREAL TIME INTO THE EQUIVALENT INTERVALS OF MEAN SOLAR TIME.

Hours of Sidereal Time.	Mean Time Equivalents.		Minutes of Sidereal Time.	Mean Time Equivalents.		Minutes of Sidereal Time.	Mean Time Equivalents.		Seconds of Sidereal Time.	Mean Time Equivalents.		Seconds of Sidereal Time.	Mean Time Equivalents.

			30	29	54 29	60	59	50' 17	30	29' 92	60	59' 84		

To obtain the Mean Time corresponding to a given Sidereal Time, take, from the second page of the month, the preceding Mean Time at Sidereal Noon, and add to it the Mean Time Equivalents corresponding to the hours, minutes, and seconds of the Sidereal Time.

Let it be required to find the Mean Time corresponding to the Sidereal Time 20h. 51m. 23s., on Sept. 15:—

	H.	M.	S.
Mean Time at Sidereal Noon, Sept. 14	12	27	37
Sidereal intervals and Mean Time Equivalents	20h. =	19	56 43' 41"
	51m. =	50	51' 64"
	23s. =		22' 94"
Corresponding Mean Time, Sept. 15	9 15 34' 99"		

SOME ELEMENTS OF THE PLANETARY SYSTEM.

Name.	Mean Distance from Earth in Millions of Miles.	Sidereal Period of Revolution round Sun.	Time of Axial Rotation.	Real Diameter in Miles.	Volume ☉=1.	Density ☉=1.
		D.	H. M.			
The Sun.. ☉	92' 9	607 48	866,400	1320000	0' 25
Mercury.. ☿	56' 9	88	*24 5½	3,030	0' 056	2' 23

Saturn... ♄	793' 2	10,759	10 14½	71,000	849	0' 13
Uranus... ♅	1,689' 0	30,687	9 30 ½	31,500	59	0' 22
Neptune... ♆	2,698' 8	60,127	32,900	103	0' 20

* The periods of rotation of Mercury and Venus have not been definitely ascertained.
N.B.—The numbers in the third column refer to the mean distances at inferior conjunctions for the inferior planets; at opposition, for the superior planets.

TIDES AND TIDAL WAVES.

It is not possible within the limits assigned to this article to enter minutely into all the causes which produce the complex phenomena of the tides, though the most prominent factors may be explained without having recourse to the higher mathematics necessary to a full comprehension of this difficult subject.

The Newtonian law of gravitation teaches us "that every particle of matter in the universe attracts every other particle, with a force varying inversely as the square of their mutual distances, and directly as the mass of the attracting particle."

Suppose the Earth to be a sphere covered by a sea of uniform depth, and the Earth and Moon relatively at rest, then the layer of water immediately under the Moon will be attracted more per unit of mass than the Earth, and heaped up towards the Moon; the layer of water on the opposite side of the Earth will be attracted less than the solid Earth per unit of mass: being further off, the water here will be heaped up away from the Earth and Moon. At these opposite places there will be high water, though in this latter case not quite so high as in the former. The sea will thus have very nearly the form of a prolate spheroid, with the major axis passing through the Earth and Moon. At places situated on a circle 90° from the major axis there will be low water.

As the Moon revolves around the Earth, and the Earth rotates on its axis, this figure never has time to perfect itself, and an imperfect form of it travels round the Earth in a lunar day, which is longer than a civil day by about 50 minutes. So that high water occurs, generally speaking, about that time later at the same place each day.

Besides the Moon, the Sun exerts a considerable disturbing force, producing tides exactly similar to those produced by the Moon, but smaller in effect, for although the mass of the Sun is immensely greater than that of the Moon, yet his distance from the Earth is such that the ratio of his tide-producing force to that of the Moon is as 1 to 2½. The observed tide, therefore, is the effect of the superimposed lunar and solar tides. Calculation shows that the difference between the major and minor axes of the spheroid due to the Moon alone amounts to 58 in., and according to the ratio above would make the same difference due to the Sun alone about 23½ in.

At New or Full Moon these two bodies are acting in concert, and as a consequence the tides are higher and lower; with the Moon in quadrature they are acting in opposition, and these tides are neither so high or low: in the former we have the Spring, and in the latter the Neap tides. It is not strictly true to say that high water takes place immediately under the Moon, because, owing to the irregular distribution of land and water, with the variation in the depth of the ocean, an amount of friction is caused which retards the passage of the tidal wave, making it come later than it otherwise would. This retardation is a matter of observation peculiar to each locality, and known technically as the Establishment of the Port. The actual high tide being that produced by the united action of the Sun and Moon, makes it necessary to correct the Establishment of the Port, in calculating the times of high water at any place, by a quantity depending upon their relative positions; thus, at the intermediate

phases of the Moon between New Moon and First Quarter, the Sun passes the Meridian before the Moon and, pulling the tidal wave towards the West, accelerates the time of high water: this is called the priming of the tides. On the other hand, between First Quarter and Full Moon the tide lags. In like manner, between Full Moon and Last Quarter the tide primes, and from Last Quarter to New Moon lags. Since Newton's time the theory of the tides has been improved by the several mathematicians who have taken the problem in hand, but, from our want of knowledge of the depth of the ocean and the geography of its bottom, cannot yet be considered perfect.

With our actual geography many local complications arise: seas like the Mediterranean, Baltic, or Buxine offer so small an area that the Moon can only act upon each as a whole, and there is practically no tide. The disturbing action requires a very wide expanse of deep water, such as the great Southern Ocean, or the S. Pacific; and there, accordingly, is assigned the birthplace of our great tidal wave, to which many tides in distant seas are referred. One mighty pulse enters the Pacific in a N.W. direction, and another the Atlantic, both to be modified by the depth of water and the form of the coasts, and both extending to the bottom of the ocean. Owing to the islands of the Pacific the tides there become small as the impulse travels north; but in the long deep trough of the Atlantic the tidal force attains a velocity of from 600 to 650 miles an hour. The western impulse across the S. Pacific reaches Tasmania in 12 hours, and in 12 hours more dashes against Hindostan and S. Africa. Another 12 hours and the tidal wave has reached Newfoundland on the West, and the African Cape Blanco on the East. Turning eastward across the N. Atlantic, the tide in 4 hours is split into two waves at Land's End, one of which goes slowly up the shallow English Channel, while the main branch is borne round the North of Scotland—to bring high water to Aberdeen and the coasts of Norway and Denmark—and finally reaches the mouth of the Thames in 48 hours after leaving the Antarctic Ocean. The Atlantic, being deep and free of islands, produces an independent tide, which helps to modify the tidal impulse from the South, one result being the famous high tides of the Bay of Fundy.

The tides are locally affected by the configuration of the coasts, and also to a slight extent by the changes of atmospheric pressure. Where the tidal wave enters gulfs or estuaries which open in its direction, the difference between high and low water is much increased—e.g., Bristol Channel, 40 to 60 ft.; St. Malo, in the English Channel, 50 ft.; Chepstow, 60 ft.; Bay of Fundy, 70 ft. up to 100 ft. in the highest spring tides. The "bore" or "eagre" on certain rivers occurs when the advanced portion of the tidal wave moves so slowly, owing to shallowness or other circumstances, that the succeeding waves gather in a heap—e.g., Severn "head," 3 ft. high; Hoogly, 5 ft.; Amazonas, 12 to 15 ft.—that on the Tien Tang in China has been estimated to flow up the river with a velocity of 13 miles an hour. Another curious local modification of the tides is seen at Southampton, Poole, Weymouth, &c., where two tides occur in 12 hours; a similar anomaly near Clackmannan, on the Firth of Forth, is known as the "leaky tides."

The following heights of tides on the Thames,

with the distance of their respective stations from the mouth of the river, are from *Phil. Trans.* (cxviii. 204):—

	Height.	Distance.
	ft. in.	m.
London Docks.....	x8 10	60
Putney	10 2	67½
Kew	7 1	73
Richmond	3 10	76
Teddington	1 4½	79

The lunar tides, according to the results of recent investigation, are by friction slowly interfering with the Earth's rotation, and therefore lengthening our day. This must go on through countless centuries till the Earth's time of rotation is equal to a lunation, when the lunar tides will no longer exist, and our seas be disturbed only by the weak action of the solar tides.

OUR SEASONS.

The revolution of the Earth in its annual orbit round the Sun has the effect of causing the latter body, seemingly, to describe a complete revolution among the Stars in the course of a year. If the plane of this apparent path had been parallel to the Earth's Equator, the Days and Nights would be equal all over the Globe, and each place on the Earth would have one constant Season, the character of which would depend on its geographical latitude. Instead of this coincidence of planes, the Equator and Ecliptic (as this apparent path of the Sun is called) are mutually inclined to each other at $23\frac{1}{2}^{\circ}$; consequently, the Sun is alternately seen above and below the Equator by this amount, causing the phenomena of Summer and Winter: giving long days and Summer to the Northern Hemisphere when the Sun is North of the Equator, and short days and Winter when South of it.

This inclination of the two planes causes the Sun to cross the Equator twice in the year, viz., in the Spring and Autumn, at which times the Days and Nights are equal all over the world.

From Spring, through Summer to Autumn, the Sun traverses exactly one-half of the Ecliptic, and from Autumn, through Winter to Spring, the other half; but that these halves are not travelled over in equal times will be seen by an inspection of the times at which the different Seasons commence. It appears that the Sun is longer in performing the Summer than the Winter half; this is caused by the eccentricity of the Earth's orbit and the Law of Areas—a law which requires that an imaginary line, joining the Earth and Sun, shall sweep over equal areas in equal times. The Earth when farther from the Sun, as at the Summer Solstice, must move more slowly than at the Winter Solstice; because then the line joining the two bodies is longer. The effect is to detain the Sun about eight days longer in the Northern than in the Southern Hemisphere.

The Earth's atmosphere is generally supposed to extend some forty miles in height, probably farther, but becoming, at only a few miles from the surface, of too great a tenuity to support life. The condition and motions of this aerial ocean play a most important part in the determination of climate, modifying, by absorbing, the otherwise intense heat of the Sun; and, when laden with clouds, hindering the Earth from radiating its acquired heat into space. The

amount of heat absorbed in its passage through the atmosphere will depend upon the thickness of the stratum which the rays have to penetrate, and this on the meridian altitude of the Sun.

If the surface of the Globe were smooth, and consisted entirely of land or water, the mean temperature of our Seasons would depend solely on our geographical latitude; but being, as it is, made up of water and land very unequally distributed, the former occupying two-thirds of the entire surface of the Globe, the temperature of the Seasons at places on the same parallel of latitude is modified by the surrounding masses of land and water. The great capacity of water for heat, and its low power of radiation, make the great Ocean, extending from Pole to Pole, the reservoir which stores up for us the heat it has received from the Sun; while the land, radiating its heat very quickly, would soon grow cold. The principal medium by which this heat is conveyed to the land is that of the Winds, which, receiving their warmth and moisture from the water, pass over the land, and compensate for the loss of heat which the latter suffers from radiation. From this cause it is that islands enjoy more equable Seasons than inland countries, being neither so cold in Winter nor so hot in Summer; since the same clouded skies that retard the cooling of the land by radiation also shield it from the rays of the Sun in Summer. But in the interior of continents, where the winds have lost their moisture on their passage from the coast, great extremes are known to prevail between the Summer and Winter temperatures. We must not forget that the oceans and seas are traversed by currents of warm water from the Equatorial regions, which greatly promote the distribution of heat.

VARIABLE STARS.

Although the Stars generally shine with uniform brightness, there are among them some remarkable exceptions to this general rule. The earliest known, and the most remarkable amongst this class of Stars, is one situated in the constellation Cetus, and known by the name of α Ceti, or Mira Ceti. It has a period of nearly 33·6 days; that is to say, it goes through its cycle of variations in that length of time, continuing for about twelve or fourteen days at its maximum brightness, which has, at some of its maxima, reached to the second order of magnitude; it then goes on decreasing for some three months until it becomes invisible, in which condition it remains for five more months, when it again goes on increasing to the end of the period, when the maximum is again reached; but the order of magnitude is not always the same at successive maxima. The month of October is the best time for observing it. Quite recent observations seem to show that this Star has now settled down to the 8th magnitude, after having exhausted its changes of magnitude. It will be found in R.A. 14h. 14m. 48s. and South Declination $3^{\circ} 23'$.

Another remarkable Variable Star is β Persei. This has a very short period—not quite three days—and has a range of magnitude from 2·2 to 3·7. It continues at its maximum for two days and a half, then begins to decrease very suddenly, and in rather more than four hours is reduced to a Star of nearly the fourth magnitude; after remaining at this magnitude for a quarter of an hour, it again

attains to its maximum in the same time that it took in passing from it to the minimum. This Star will be found in R.A. $3^h. 21^m. 18^s$. and North Declination $40^\circ 37'$. It can be well observed in October and November. For table of times of minima in 1910, see p. 82.

ϵ Geminorum varies from the 6th to the 6 $\frac{1}{2}$ magnitude, with a period of $20^h. 8^m$. It may be observed in June, southing about midnight on the 6th. Will be found in R.A. $17^h. 11^m. 57^s$. and North Declination $10^\circ 19'$.

The Variable Star β Lyre is remarkable in having a double period, viz., two maxima and two minima—the double period being very nearly equal to thirteen days; the difference between the maximum and minimum is only one degree of magnitude. There is another peculiarity in the changes of this Star—that, although the two maxima are equal, the minima are unequal. It is situated in R.A. $18^h. 46^m. 45^s$. and North Declination $33^\circ 15'$. The best time for observing it is in the months of June and July. Bright lines are occasionally seen in the spectrum of this Star.

The Star δ Cephei is also subject to considerable variations in magnitude, passing from the third to the fifth with a period of $5\frac{1}{2}$ days. In passing from the minimum to the maximum it occupies less time than that required for it to reach the minimum again—in the proportion of 38 hours to 91. It is to be found in R.A. $22^h. 25^m. 49^s$. and North Declination $57^\circ 57'$. August and September are the best months in which to observe it.

There are two hypotheses suggested to explain the phenomena exhibited by the variable or periodical Stars: one of which endeavours to account for the variations in magnitude by supposing that opaque bodies are revolving around these particular Stars, and that at certain times they are interposed between the Earth and the Star, and so cut off from us a portion of the luminous rays of the latter. The other hypothesis suggests that the Stars themselves may have portions of their surface of unequal brightness, and that in their rotations they present to us in turns these more or less bright parts. This theory fails to explain the changes observed in the stars of the Algol type, and is only applicable to such as are quite regular in their fluctuations. Professor Pickering has shown that none of the theories put forward to account for the variability of the light of such stars as Algol will satisfy the observed changes, except that of an opaque or less bright satellite. Adopting this theory, he finds theoretically a satellite whose position and movements would agree with the observed facts.

TERRESTRIAL MAGNETISM.

Magnetism is that property possessed by certain bars of steel, called Magnets, of attracting pieces of iron and also other magnets: beyond this idea very little, if any, meaning is popularly attached to the term Magnetism.

Every magnet has two poles, each pole having, as the term implies, exactly opposite properties, such that if we suspend one magnet by a thread free to move in any direction it will be found that on bringing another magnet, held in the hand, near to one end of the suspended magnet, if the opposing poles of each are of like properties, they will repel each other, but if of unlike, they will be attracted towards each other. In the

mariner's compass we have a case of this kind, where the compass-needle is so suspended as to be free to move in the horizontal direction, the Earth itself being the other magnet, with its South Pole near to the Earth's North Pole, and its North Pole near to the Earth's South Pole; so that the North Pole of the compass will always point to the Magnetic South Pole of the Earth, differing from the true or astronomical position by a quantity called the "variation." The variation of the compass is not only different for different places on the Earth, but is, moreover, liable to slow variation from year to year. In 1750, at London, the needle had an eastern variation of about $11\frac{1}{2}^\circ$; between 1657 and 1662 its direction coincided with the plane of the astronomical meridian; that is to say, the variation, or declination, as it is generally called, was zero; since then it travelled westwards, and reached the maximum western declination in 1815, and is at the present time (1910) slowly moving towards the East.

The compass-needle, being constructed to move in a horizontal direction only, exhibits that component of the total magnetic force which determines the declination; but if the needle had been mounted on a horizontal axis, placed in the magnetic meridian, and left free to move in a vertical plane, it would have been found to *dip*, as it is technically called, or be inclined at an angle to the horizontal plane, the North Pole of the needle being depressed. The value of this *inclination* or *dip* varies in different places on the Globe, increasing towards the Poles, so that in the Northern Hemisphere, at the Magnetic Pole, we shall have the north end of the needle pointing directly downwards.

This North Magnetic Pole was found by Sir James Ross to be situated in 97° W. longitude and 70° N. latitude. The South Magnetic Pole is situated in about 165° E. longitude and 76° S. latitude. Between these points there are found places of no *dip*; all such places are said to be situated on the Magnetic Equator, a plane not far removed from the terrestrial Equator. The *dip*, like the declination, is subject to secular and other variations, the true laws of which are not yet understood, but for the investigation of which magnetic observatories have been established all over the world, and elaborate series of observations made on the motions of suspended magnets (their movements in most observatories being automatically recorded by photography), furnishing a continuous record from hour to hour, and year to year, of the forces acting upon them.

FORECASTING THE WEATHER.

All outdoor pursuits, undertaken for profit or pleasure, depend so much upon the weather that we can imagine mankind to have taken an interest in its study from very early times; and, as a matter of fact, the popular ideas about weather prognostics are much the same as those which were in vogue in the earliest ages. Aristotle, in his book on Meteors (which, in his time, were supposed to have an atmospheric origin), collected all the then known prognostics of the weather, but in this work no serious attempt is made to explain the phenomena observed. In the cases where the attempt is made, the explanations offered are often very absurd, and show entire ignorance of the principles of physical science.

The observation of the state of the sky taught

the meteorologists of early times when to expect variations in the weather, and the result of these observations, formulated into short and pithy sayings, made up, until quite recent times, the science of weather prognostics.

Birds and beasts are all more or less sensitive to coming changes in the weather, and by observation of their movements, warning of changes in the weather may be obtained. Among other instances, it is observed that sea birds, as stormy weather comes on, fly inland in search of food; wild fowl leave the marshy grounds for higher localities; swallows and rooks fly low before and during bad weather; frogs are unusually noisy before rain; sheep huddle together near bushes and trees.

It was not until the discovery of the barometer, in 1643, that the first great step was made towards a knowledge of the nature of our atmosphere. We were then, by its help, enabled to ascertain the weight and pressure of the great aerial ocean which surrounds us, and to learn when and where it was in a state of calm or storm. The invention of the thermometer, shortly afterwards, gave the means of determining its temperature. The hygrometer, for showing the amount of moisture it contained, and the anemometer, for giving the direction and force of the wind, are also instruments of great importance to the meteorologist. The indications of these instruments, combined with the careful observation of atmospheric appearances, interpreted by the results of former observations, will enable the individual observer generally to predict the kind of weather that may be expected in his immediate locality for a day or sometimes longer in advance.

A strip of sea-weed forms a very useful hygrometer for practical purposes, provided it be not kept in a room warmed artificially. In fine weather it will keep dry and have a somewhat dusty feeling, but with an increase of moisture in the air will become limp and sticky, indicating a probable change of weather in the shape of rain.

Since the time of Admiral FitzRoy the science of weather forecasting has made much progress in its details, but, for the individual observer, the method remains much the same now as then. The principal rules in use for forecasting the weather may be briefly stated as follows:—

A rising barometer usually foretells less wind or rain, and a falling barometer more wind or rain, or both; a high barometer, fine weather, and a low one the contrary.

If the barometer has been *about* its ordinary height at the sea level, and is steady or rising, while the thermometer falls and the air becomes drier, north-westerly, northerly, or north-easterly wind, or less wind, may be expected; and, on the contrary, if a fall takes place with rising thermometer and increasing dampness, wind and rain may be looked for from the south-east, south, or south-west; a fall of the barometer, with low thermometer, foretells snow.

With the barometer *below* its ordinary height a rise foretells less wind, or change in the direction towards the north, or less wet; but when the barometer has been low, the first rising usually precedes strong wind or heavy squalls from the north-west, north, or north-east, and continued rising foretells improving weather. If the barometer falls and warmth continues, the wind will probably *back*, and more southerly or south-westerly winds will follow.

In northern latitudes the heaviest northerly

gales occur after the barometer first rises from a very low point. A rapid rise generally indicates unsettled weather; slow rise or steadiness, with little moisture in the atmosphere, fair weather. A considerable and rapid fall signifies stormy weather and rain. The barometer generally falls with a southerly and rises with a northerly wind; though sometimes the contrary happens, and then the southerly wind is dry and the weather fine, or the northerly wind wet and violent.

When the barometer sinks considerably, high wind and rain or snow will follow; wind from the northward, if the thermometer is low for the season; from the southward, if high.

When a gale sets in from the east or south-east, and wind *veers* by the south, the barometer will continue falling till the wind becomes south-west, when, after a lull, the gale will be renewed.

The north-east wind tends to *raise* the barometer most, and the south-west to lower it most.

Instances of fine weather often happen with a low barometer, and are generally followed by a duration of wind or rain, or both.

Predictions founded solely on the indications of the barometer and thermometer may be made with more certainty if combined with careful observation of the appearance of the sky, and the atmospheric effects peculiar to the particular locality.

A rosy sky at sunset, whether clouded or clear, a grey sky in the morning, a low dawn (that is, when the first signs of the dawn appear on the horizon), all indicate fair weather. A red sky in the morning indicates bad weather, or much wind; and a high dawn (or when the first signs of the dawn are seen above a bank of clouds) presages wind.

From the clouds we may draw the following conclusions:—Soft-looking and delicate clouds foretell fine weather, with moderate breezes; hard-edged clouds, wind; rolled or ragged clouds, strong wind. A bright yellow sky at sunset also presages wind, and a pale yellow sky wet.

Dew and fog both indicate fine weather, while remarkable clearness of the atmosphere near the horizon (causing distant objects to appear very distinct and nearer than usual) is one of the most characteristic signs of coming wet.

At the present day, by the help of the electric telegraph, the meteorologist can obtain from as many stations as he desires the height of the barometer, direction and force of wind, &c., data which will inform him of the condition and movements of the aerial ocean at a definite time. He then marks on a map the height of the barometer at each place, and, drawing lines through all the places where the quicksilver stands at the same height, at any convenient interval he obtains a series of lines of equal pressure or weight, called shortly *isobars*, which show the height or depression at those places as the contour lines on a map show the different altitudes of the mountains and valleys. The thermometer readings, treated in the same way, are called *isotherms*. To make these synoptic charts (as they are called) complete, the force and direction of the wind, the amount of humidity, character of clouds, and other weather signs are also marked down, so that the chart may furnish a view of the weather at that particular time over the area from which reports have been obtained.

Supposing now that at the same time the next day a new set of data are received and marked on another chart, a comparison of the two will show the nature and direction of the change going on, and enable the meteorologist to pre-

diet, to a certain extent, what will be the immediately coming weather. This is a general description of the way in which the forecasts of weather, printed in the daily papers, are made. The interpretation of these synoptic charts may not appear to the reader to be a very difficult operation, but it must be remembered that meteorology is purely a science of observation, and as such will be most successfully handled by the observer of the greatest experience. From want of knowledge concerning the laws which govern the fluctuations of the weather, failures in the forecasts must happen now and again, and no reason can be given why certain states of the atmosphere, which previous observation would lead us to believe should be stable, suddenly break up without any apparent warning.

The extended use of the telegraph, due to the introduction of wireless telegraphy on board ships, especially on the great liners between Great Britain and America, has already done much, and will probably do still more in the future, to improve our means for forecasting the weather.

Besides the meteorological instruments mentioned above, there is one often used to indicate weather changes which is known as the chemical weather-glass, camphor-glass, or storm-glass.

Though sold in London more than a hundred years ago, no scientific explanation of its indications seems to have been attempted till the late Admiral FitzRoy took it in hand. He considered that this instrument had a scientific value, used in conjunction with the barometer and thermometer, in predicting local storms. Some other writers are at variance with the Admiral on this point, affirming that the weather indications of the storm-glass are not to be relied on; another, that light and temperature are the agents that bring about the changes observed.

The instrument itself consists of a mixture of camphor, nitrate of potassium, and muriate of ammonia, partly dissolved in alcohol, with a little water. This solution is placed in a long glass vial or tube, with some air, and hermetically sealed. Some authorities say that a small hole should be left in the top to admit the external air.

At one time the upper part of the liquid in the tube will appear quite clear, the bottom portion being occupied by a shapeless mass like melting white sugar. Again, the liquid portion will be more or less filled with crystallizations like fern-leaves or hoar-frost, and under some circumstances, like stars.

The general rules given for interpreting the readings of the storm-glass are as follows:—

- (a) If the undissolved substance lies low and smooth at the bottom of the tube—fine weather.
- (b) If it rises gradually in the shape of fern or feather-like crystallizations—rain.
- (c) If it rises much higher than in (b), and if the liquid portion is less clear, with star-like crystals in motion, high wind or storm will follow.

RIGHT ASCENSION.

The Right Ascension of any heavenly body is its angular distance measured along the Equator from that point of intersection of the Equator and Ecliptic known as the Vernal Equinox. In the time of the ancient astronomers this point was situated in the constellation of Aries, and called by them the "First Point of Aries," but it has since then retrograded considerably behind that constellation, and is at present in the constellation Pisces. Modern astronomers, however, still speak of this zero point, whence Right

Ascensions are measured, as the "First Point of Aries." The Right Ascension and Declination are the two co-ordinates which define the position of any point on the celestial sphere with regard to the Equator as a fundamental plane, just as those of longitude and latitude define the position of any place on the terrestrial globe; the meridian of Greenwich being taken as the starting-point by geographers from which to reckon their longitudes, while the astronomer reckons his from the meridian passing through the Vernal Equinox.

Since a well-regulated astronomical clock should show *oh. om. os.* when the First Point of Aries is on the Meridian, the Right Ascension may be called the Sidereal time of Southings, and the approximate Mean time corresponding to it may be easily found for any object whose Right Ascension is given in this Almanack by means of the column headed Sidereal Time at Mean Noon, printed on the second page of each month. The rule may be thus stated:—From the given Right Ascension subtract the Sidereal time at the preceding Noon, and further diminish the result at the rate of *10 sec.* an hour. If the Right Ascension should be smaller than the Sidereal time to be subtracted, then *24* hours must be added to it. As an example:—At what time will Sirius South on March 7?

R. A. of Sirius *6h. 41^m. 11^s.*
Sidereal time at Mean Noon (sub.) *22h. 57^m. 12^s.*

Diminish by the Acceleration for *7h. 43^m. 53^s.* at *10^s.* per hour *17^m. 17^s.*

Approximate Mean time of Southings, March 7 *7h. 42^m. 38^s.*

In a similar manner the Sidereal time corresponding to any Mean time may be found by adding the Mean time to the Sidereal time at Noon of that day. As an example, let it be required to find the Sidereal time corresponding to *8h. P.M.* on March 15.

Sidereal time at Mean Noon *23h. 58^m. 50^s.*
Mean time (add) *8h. om. os.*

Add for Acceleration for *7h.* at *10^s.* per hour *7h. 58^m. 50^s.*

Approximate Sidereal time March 15 at *8h. P.M.* *8h. om. 10^s.*

APPARENT DIMENSIONS OF SATURN'S RING, 1910.

Date.	Major Axis.	Minor Axis.
Jan. 18	40 ⁸⁵	— 7 ⁷⁶
Feb. 27	38 ⁵³	— 8 ²⁹
Mar. 19	37 ⁸⁴	— 8 ⁷⁵
April 28	37 ⁵³	— 9 ⁹³
May 18	37 ⁵⁰	— 10 ⁶⁰
June 17	39 ¹⁰	— 11 ⁶⁵
July 17	40 ⁹⁶	— 12 ⁶⁷
Aug. 16	43 ²¹	— 13 ⁵¹
Sept. 15	45 ³⁶	— 13 ⁹⁴
Oct. 15	46 ⁶⁵	— 13 ⁷⁷

ILLUMINATED PORTIONS OF THE DISCS OF MERCURY AND VENUS, 1910.

Date.	Mercury.	Venus.
Jan. 16	0 ³⁰⁷	0 ¹⁸⁷
Feb. 15	0 ⁵⁰⁶	0 ²⁰⁴
Mar. 17	0 ⁸⁷¹	0 ²⁴⁰
April 26	0 ⁸⁷⁹	0 ⁴⁵⁵
May 16	0 ⁹⁷⁰	0 ⁶⁰⁴
June 15	0 ²⁶⁹	0 ⁷¹⁹
July 15	0 ⁹⁷⁸	0 ⁸¹³
Aug. 14	0 ⁷⁵¹	0 ⁸⁸⁹
Sept. 13	0 ²⁶⁴	0 ⁹⁴⁵
Oct. 13	0 ⁶⁰³	0 ⁹⁸²
Nov. 17	0 ⁹⁹⁷	0 ⁹⁹⁹
Dec. 27	0 ⁷⁹⁷	0 ⁹⁹⁶

The figures in the second and third columns of the preceding table give the apparent dimensions of Saturn's Ring as seen from the Earth, and refer to the outer limit of the outer Ring. The sign + signifies that the northern surface will be visible, and - the southern surface. The Ring will be invisible when its plane passes through either the centre of the Sun, centre of the Earth, or when the Sun and Earth are on opposite sides of the plane of the Ring.

The figures in the fifth and sixth columns represent respectively the illuminated portions of the discs of Mercury and Venus.

MAGNETIC ELEMENTS.

The following table of mean magnetic elements is derived from the observations made at Greenwich in the respective years, and applies to Greenwich only.

The diurnal variation of the magnetic declination at Greenwich is about $2'$ in summer and $7'$ in winter. The needle occupies its mean position about 10h. a.m., and again about 6h. p.m., throughout the year. It reaches its most westerly position about 2h. p.m., and its most easterly position during the night or early morning, according to the season of the year. The inclination or dip also varies, from hour to hour, in a similar manner to the declination. The declination and dip are also subject to secular variations, the duration of which is not accurately known. Accidental perturbations, due to magnetic storms, affect the needles. These variations in the position of the magnets occur with great suddenness, deflecting the needle right and left with great rapidity, almost like ordinary telegraphic signalling, and are, generally speaking, coincident with the passage of great outbursts of sun spots across the sun's central meridian.

Year.	Mean Magnetic Declination at Greenwich West.	Horizontal Magnetic Force in C. G. S. Units at Greenwich.	Mean Inclination or Dip of Needle at Greenwich.
1889	17 34' 9"	18321	67 24' 9"
1890	17 28' 6"	18323	67 22' 9"
1891	17 23' 4"	18325	67 21' 4"

GREENWICH OBSERVATORY.

Founded 10th August, 1675.

ASTRONOMERS ROYAL.

John Flamsteed	1675
Edmund Halley	1719
James Bradley	1742
Nathaniel Bliss	1762
Nevil Maskelyne	1765
John Pond	1811
Sir George Biddell Airy	1835
Sir William Henry Mahoney Christie, &c. &c.	1887

The Variable Star Algol (Beta Persci).

THIS is one of the most conspicuous and noteworthy variable stars in the heavens. Its remarkable fluctuations of light were probably known to the ancient observers, but the first definite record of its discovery is by Montanari, in 1669, and the accurate determination of its period was not effected until 1782 by Goodricke. At that time the star passed through all its gradations of brilliancy in 2d. 20h. 48m. 59s., but the period seems decreasing, for Chandler has recently found it $8\frac{1}{2}$ seconds less. The star is usually a little fainter than and mag., and re-

mains so for about 2d. 12h., when it rapidly declines in lustre, and in about 4½ hours arrives at a minimum of $3\frac{3}{4}$ mag. There is then a revival of its brilliancy, and in 5½ hours it reaches its normal magnitude of 2½. The following are the computed times of minima in 1910. From the end of March until the beginning of August the star is not favourably visible, being immersed in the vapours and twilight over the northern horizon; but in the autumn and winter months it may be viewed with advantage. Astronomical time is employed in the table.

Celestial Objects and Phenomena for Observation, 1910. 83

THE following is a summary of the more prominent and interesting astronomical objects and occurrences visible during the year. The information is intended as a guide to that ever-increasing band of amateur observers who "consider the heavens." We have only attempted to describe such events as are capable of being definitely predicted. There are various sights and wonders presented in the firmament which do not admit of being foretold with accuracy. Among the latter class of objects may be included large Sun-spots, displays of Auroræ Boreales, bright Comets, New Stars, and brilliant Meteors or Fireballs.

ECLIPSES IN 1910.

In the year 1910 there will be two Eclipses of the Sun and two of the Moon.

I. A Total Eclipse of the Sun on May 9, invisible at Greenwich. Begins on the Earth generally at 3h. 38m. morn., in longitude 61° East of Greenwich, and latitude 56° South. Central Eclipse begins generally at 5h. 9m. morn., in longitude 112° East of Greenwich, and latitude 73° South. Central Eclipse ends generally at 6h. 16m. morn., in longitude 156° East of Greenwich, and latitude 46° South. Ends on the Earth generally at 7h. 46m. morn., in longitude 148° East of Greenwich, and latitude 16° South.

The line of Central Eclipse lies entirely in the Ocean, to the South of Australia. A partial Eclipse will be visible in each of the following places:

At Perth, Western Australia :
 Begins May 9th. 3h. 30m. aft. } Standard
 Greatest Phase ... May 9th. 4h. 49m. aft. } Mean
 Ends May 9th. 5h. 5m. aft. } Time.
 Magnitude of Eclipse, 0.76.

At Adelaide, South Australia :
 Begins May 9th. 2h. 35m. aft. } Standard
 Greatest Phase ... May 9th. 3h. 50m. aft. } Mean
 Ends May 9th. 4h. 57m. aft. } Time.
 Magnitude of Eclipse, 0.92.

At Melbourne, Victoria :
 Begins May 9th. 3h. 11m. aft. } Standard
 Greatest Phase ... May 9th. 4h. 22m. aft. } M. Time.
 Magnitude of Eclipse, 0.95. (Sun sets at 5h. 24m. aft.)

At Sydney, New South Wales :
 Begins May 9th. 3h. 25m. aft. } Standard
 Greatest Phase ... May 9th. 4h. 33m. aft. } M. Time.
 Magnitude of Eclipse, 0.86. (Sun sets at 5h. 7m. aft.)

At Hobart Town, Tasmania, a Total Eclipse is visible.

Begins May 9th. 3h. 7m. aft. } Standard
 Totality begins ... May 9th. 4h. 14m. aft. } Mean
 Greatest Phase ... May 9th. 4h. 16m. aft. } Time.
 Totality ends May 9th. 4h. 17m. aft.
 Magnitude of Eclipse, 1.01. Sun sets at 5h. 4m. aft.

II. A Total Eclipse of the Moon, May 24, partly visible as a partial Eclipse at Greenwich. The first contact with the Shadow takes place only 10m. before the Moon sets at Greenwich, on the morning of May 24.

III. A Partial Eclipse of the Sun, November 1-2, invisible at Greenwich. Begins on the Earth generally at 11h. 52m. aft., in longitude 118° East of Greenwich, and latitude 63° North. Greatest Eclipse on November 2 at 2h. 5m. morn., in longitude 155° West of Greenwich, and latitude 62° North. Ends on the Earth generally at 4h. 26m. morn., in longitude 165° West of Greenwich, and latitude 16° North. Magnitude of Eclipse, 0.85.

IV. A Total Eclipse of the Moon, November 15-17, visible at Greenwich.

First contact with
 the Shadow 16d. 10h. 44m. aft. } Mean
 Middle of the Eclipse 17d. 0h. 21m. morn. } Time at
 Last contact with the } Greenwich
 Shadow 17d. 1h. 58m. morn. } which.
 Magnitude of the Eclipse, taking Moon's diameter = 1, 1.13. The first contact with the Shadow occurs at 94° from the North point of the Moon's limb, towards the East, and the last contact at 227° in the same direction.

V. ECLIPSES OF JUPITER'S SATELLITES.

The following table contains all the Eclipses of the first Satellite, and those only which are visible at Greenwich of the second, third, and fourth Satellites.

The Roman numerals indicate the Satellite eclipsed; the letters D. and R. signifying respectively Disappearance and Reappearance. Those Eclipses which are visible at Greenwich have an asterisk after the D. or R. in the second column.

At the beginning of the year, and until March 30, the disappearances and reappearances take place on the Western side of the Planet; from April 1 to September 19, on the Eastern side; from November 17 to the end of the year, on the Western side. In the astronomical telescope, which inverts the image, the Western side of the Planet will be on the left hand and the Eastern on the right.

The mean time for any other place than Greenwich may be found by applying to the times given in the following table the difference of longitude, adding if the longitude of the place is East of Greenwich, and subtracting if West.

30	I. D.	6 23	40	aft.

THE SUN.

The Sun.—Whenever the telescope is employed for solar observation a dark-tinted glass should be attached to the eye-piece, in order to moderate the intense brilliancy of the Sun, for unless precautions of this kind are taken serious damage may result to the observer's sight. A very convenient plan of effecting observations of the Sun is to detach the coloured glass from the instrument, and to allow the telescopic image of the Sun to fall upon a piece of white cardboard. The details of the spots may be readily perceived in this manner, and the speckled appearance of the whole disc will be displayed satisfactorily. This method is to be recommended for general purposes, inasmuch as it prevents possible injury to the eye and affords an easy means of exhibiting the spots to several persons at the same time. For critical examination of sun-spot structure and variation in detail, we must, however, resort to the ordinary plan of direct vision as decidedly the most effective. The spots are abundantly displayed at intervals of about eleven years with intervening times of minima. We may look at the Sun many times during two or three successive years, and scarcely ever see a large dark spot amid the bright stippling of the solar surface. In other years we shall see spots distributed in plentiful array along zones lying not far N. and S. of the Equator. Thus in 1901 and 1902 the Sun was practically free from conspicuous spots, while in the last two or three years they have been very abundantly presented.

The spots apparently transit the solar diameter in about $13\frac{1}{2}$ days, and merit careful attention when near the margin of the disc, for various modern observers question the view that they represent cavities in the Sun's envelopes. When the dimensions of a solar spot reach one minute of arc, it may be considered sufficiently large to be distinguishable with the naked eye. A spot of this magnitude can frequently be well seen through a piece of smoked or tinted glass, or possibly when the Sun is near his rising or setting, and fog near the horizon moderates his intense lustre in an agreeable degree.

THE MOON.

The Moon.—Our knowledge of the particular objects spread in great profusion over the Moon's disc may be regarded as pretty complete and accurate, except, perhaps, as regards minute and complicated details. Charts on an extensive and elaborate if not exhaustive scale have been published, but it is rather to photographic records that we must look for the solution of the problem concerning lunar activity.

As an object for telescopic study there is no known orb in the heavens which can offer a parallel to the wonderful picture she presents. Small instruments will show this most distinctly, and will amply prove that, in some branches of observation, large and expensive telescopes are unnecessary.

The crescent Moon is far the most attractive for study, as the objects show their distinctive characters more readily at that period than at any other, for the Sun is shining upon them from a slanting position, and the hills, mountains, ridges, and craters throw dark shadows which are easily distinguishable. The full Moon is brilliant, but her appearance lacks the contrast of light and shadow and the mass of detail so

prominently displayed on the surface of a lunar crescent.

MERCURY.

Mercury is an evening star in January, stationary on the 18th. The best time to observe him is about an hour after sunset, in the western horizon, from about the 1st to the 13th. His time of setting and position with regard to the stars will be found in the calendar portion of this Almanack.

Mercury is again favourably visible as an evening star during the last half of April and first few days of May.

The planet is a morning star towards the end of June; the best time to observe him is from the 18th to the 30th.

He is well placed for study, for the last time this year, in October from the 6th to the 22nd, when he will rise in the eastern sky before the Sun. In conjunction with Mars on the 27th.

It is considered interesting to obtain as many naked-eye observations of Mercury as possible at one elongation, as his proximity to the Sun renders him a somewhat difficult object. Intending observers should find the exact position and time of setting or rising so that he may not be mistaken for a star or *vice versa*. It is often necessary to use an opera-glass at first until the observer has identified the planet. In the spring apparitions he should be looked for *before* the date of maximum E. elongation, and in the autumn *after* W. elongation. Mercury is sometimes quite a brilliant object about ten evenings before E. elongation, as in May 1909, when he rivalled Jupiter and shone with a steady yellow light like the latter orb. Although when at E. elongation the planet is approaching the Earth, he declines in lustre owing to the illuminated portion of the disc becoming smaller as the phase gets more crescented.

Mercury's albedo or light-reflecting capacity is very low, being only 17, whilst that of Venus is about 65, and clouds 72. The true rotation period is still unknown, but most authorities believe it to be about the same as that of the Earth, and his revolution period 88 days. His mean distance from the Sun is nearly 36,000,000 miles, and his diameter a little over 3,000 miles; he is therefore smaller than Titan, the largest satellite of Saturn, and Ganymede, the largest of Jupiter's family. The speed with which the planet travels around the Sun varies from 23 to 35 miles per second. Spots or markings on his surface have rarely been distinguished, and his telescopic aspect is disappointing owing to the difficulty of getting a steady image and the smallness of his disc even under the best conditions.

VENUS.

Venus is in the extreme N.E. of Capricornus, being about 3° N. of δ Capricorni on January 1. Venus passes into Aquarius on Jan. 5, and is at greatest brilliancy on the 7th, when her phase is crescented like that of the moon when only about $3\frac{1}{2}$ days old. She is then nearer the Earth than when at elongation east or west of the Sun, and is therefore a most beautiful object. Her motion is retrograde until March 3, when she is again stationary, after which she resumes her direct motion eastwards for the remainder of the year.

After her conjunction with the Sun she is a morning star until *superior* conjunction on Nov. 26, and then an evening star during the rest

of the year. She enters π Pisces at the end of April and is in conjunction with δ Piscium on April 30. She is in conjunction with δ Arietis on June 19 (Venus 4° S.), and towards the end of the month she enters Taurus and is about 6° S. of the Pleiades on the 26th.

On about July 24 she crosses into Gemini.

In September she enters Leo; is in very close conjunction with Regulus (α Leonis) on the 12th. Venus slightly N.; and with σ Leonis on the 26th. Venus is in Virgo in October, being in conjunction with β Virginis on the 3rd (Venus 1° N.); in very close conjunction with η Virginis on the 9th; with γ Virginis on the 14th (Venus $1\frac{1}{2}^{\circ}$ S.); with Mars on the 22nd, 11th. alt. (Venus $0^{\circ} 45'$ N.); and with Jupiter on the 28th, 10th. 5am. morn. Crossing into Libra early in November she is in conjunction with α Libræ on the 10th (Venus about $1\frac{1}{2}^{\circ}$ N.). Her position at the end of the year is about $3\frac{1}{2}^{\circ}$ S. E. of π Sagittarii.

The rotation period of Venus is about the same as that of the Earth, and her revolution period is 224 days 16hrs. 49m. Her mean distance from the Sun is 67,000,000 miles and her diameter 7,500 miles. Like Mercury her surface markings are extremely faint and generally invisible, and it is supposed that we can only see her atmosphere and not the real surface of her globe. Her light-reflecting capacity is very great—more than that of any other planet.

MARS.

Mars.—The "ruddy planet" is visible in Pisces, in the evenings, about $3\frac{1}{2}^{\circ}$ W. N. W. of ζ Piscium at the beginning of the year. As he was at opposition to the Sun in September, 1909, he will not be very conspicuous during 1910. On the 19th he enters Aries, and is almost midway between α , β , and δ^2 Arietis on February 1. In very close conjunction with α Arietis on February 15 when the planet will pass N. of the 5th magnitude star. On February 24 he is in very close conjunction with δ Arietis, the planet being a little south.

In March he enters Taurus and is in conjunction with the well-known asterism of the Pleiades on the 10th (Mars $2\frac{1}{2}^{\circ}$ S.). Mars is 6° N. N. E. of Aldebaran (α Tauri) on April 1. He is in conjunction with β Tauri on April 17 (Mars 3° S.), and with ζ Tauri on the 21st (Mars 3° N.). At the end of April he passes into Gemini; is in conjunction with the variable star γ Geminorum on May 4 (Mars 2° N.), and with μ Geminorum on the 7th (Mars 2° N.). He is in very close conjunction with δ Geminorum on May 15, being slightly S. of the star.

On June 6 he is near κ Geminorum and about $3\frac{1}{2}^{\circ}$ S. of Pollux (β Geminorum). In the middle of June he enters Cancer and is in conjunction with γ and δ Cancri on the 25th, being 2° S. of γ and 1° N. of δ . On about July 16 Mars moves into Leo and is in close conjunction with Regulus (α Leonis) on August 2 (Mars about 1° N.). He draws near the Sun during August and is in conjunction with him on September 27. He will be visible in the mornings in Virgo at about the end of October, in conjunction with Spica (α Virginis), on October 24 (Mars 3° N.), and with κ Virginis on November 12 (Mars $2\frac{1}{2}^{\circ}$ S.). On November 26 Mars is in very close conjunction with α Libræ, the most sothern of the two brightest stars in that constellation; and on December 22 with δ Scorpil (Mars about $3\frac{1}{2}^{\circ}$ S.), and with ω^1 and ω^2 Scorpil. At the end of the year he is $4\frac{1}{2}^{\circ}$ N. of Antares, the beautiful red star in Scorpio.

The diameter of Mars is 4,200 miles; his surface is equal to two-sevenths and his volume to one-seventh that of the Earth. His revolution period is 687 days and his rotation period 24 hours 37 minutes. Mars has two satellites which were discovered by Professor Asaph Hall on August 11 and 17, 1877, but both are far beyond the reach of low power telescopes owing to their small size. Deimos revolves in 30 hours 18 minutes, and Phobos, the larger and nearer to the planet, takes only 7 hours 39 minutes, or less than $\frac{1}{4}$ the time of rotation of its primary.

Telescopically, Mars is perhaps the most interesting of all the planets, as we see the real surface of his globe and not only his atmospheric envelope as in the case of Venus or Jupiter. The southern hemisphere contains irregular dark patches with light areas and some brilliant spots upon it; and the northern exhibits a large number of dusky streaks, named "channels" by Schiaparelli. Of the real existence of these canal-like markings there is no doubt, but they are not so regular, dark, and sharply defined as some observers have drawn them. Some of these shadings are three or four thousand miles long and about sixty wide. There are also white patches near the poles of Mars, which vary according to the season, and are perhaps like the polar regions on the Earth, or may be composed of solid carbonic acid, which melts in a lower temperature than ice.

MINOR PLANETS.

Minor Planets.—Between the orbits of Mars and Jupiter revolve a large number of small orbs named Minor Planets. Over 600 have been discovered since 1801, and every month fresh members are added to the list. Nearly all these discoveries have been made by the aid of photography, Metcalf of America and Kopff and Wolf of Germany being perhaps the leaders in this branch of astronomical work. Eros is the most important of these small planets, as it is the only one moving in a path the mean distance of which falls between the Earth and Mars. Its occasional near approaches to the former will enable the Sun's distance to be determined more accurately than has been possible by any other method. Unfortunately, Eros is extremely faint, and only visible as a telescopic star. It was thought that its light is variable, but it has since been proved that the slight change noticed is merely a phase effect. A favourable opposition will not occur until 1924. The four largest and brightest of the minor planets are Ceres, Pallas, Juno, and Vesta.

Whenever it is desired to identify one of these small planets, or any other object of similar character beyond reach of the naked eye, its exact position relatively to a known star should be found and the telescope directed to the place. The observer should then construct a diagram of the small stars visible, and on succeeding nights, by comparing this diagram with the same spot in the heavens, the object sought for will reveal itself by its motion.

Ceres is in Cetus in October, and comes to opposition on the 9th, when she will be well placed for observation. Her magnitude at the time of opposition is 7.36; a small telescope will therefore be necessary to identify her. At the end of the year she is near the Equator, 7° N. W. of θ Ceti. Ceres is the largest of the planetoids, having a diameter of 477 miles. She was discovered by Piazzi in 1801.

Pallas is at opposition to the Sun, in Pegasus, on August 26, almost midway between ϵ and θ Pegasi. She is, therefore, best situated for telescopic observation near that date, her magnitude being 8.4. On September 15 she is about 51° S. of ϵ Pegasi, 61° W.S.W. of θ Pegasi, and 7° N.W. of α Arietis. *Pallas* was discovered by Dr. Olbers in 1802, and is the second largest planetoid, having a diameter of about 304 miles.

Juno was at opposition to the Sun on November 30, 1909, when her magnitude was 8.65, so she may be best observed at the commencement of 1910. She is in Eridanus, 3° N.W. of γ Eridani, a third magnitude star, about 10° W.N.W. of Rigel (β Orionis). In conjunction with the Moon on December 24 at 6 P.M. (*Juno* 1° 15' S.). She was discovered by Harding in 1804. Diameter, 120 miles.

Vesta is in Cetus in September 31° N.N.W. of α Ceti. At opposition to the Sun on October 28, when she is 3° W. of γ Ceti, 5° S. of ϵ , and 7° N.E. of the celebrated variable star α Ceti (Mira); her magnitude at the time is 5.87. The light-reflecting capacity of *Vesta* is very high, being almost as great as that of snow. Her diameter is 239 miles. She was discovered by Dr. Olbers in 1807.

JUPITER.

Jupiter.—The largest of the planets is in Virgo between γ and α Virginis (Spica) at the commencement of 1910, being about 9° N.W. of α . He may easily be identified by his brilliant steady yellow light. He rises half an hour after midnight, is due south at 6.11 A.M., and sets at 11.55 A.M. He is in conjunction with the Moon on January 3 at 1.19 P.M. (*Jupiter* 3° 11' S.), and at quadrature to the Sun on the 4th. *Jupiter* is stationary on the 30th 14° E. of the W. of θ Virginis (4th magnitude), after which he will retrograde until June 2. He is at greatest Hel. Latitude North on March 29, and at opposition to the Sun on the 31st, when he will rise early in the evening and be visible all night; he is therefore very well situated for telescopic observation during March and April. At the time of opposition he is in conjunction with the 3rd mag. star γ Virginis, being about 1° 5' S.

In conjunction with the Moon on April 22 at 5.30 A.M. (*Jupiter* 2° 48' S.). Stationary on June 2 about 1° 5' E.S.E. of η Virginis, after which he will resume his direct motion eastwards. In conjunction with the Moon on November 28 at 9.9 P.M.; and December 26 at 2.21 P.M. He is in very close conjunction with θ Virginis on September 12, the planet being slightly S. of the star; and in conjunction with Spica on October 1 (*Jupiter* 3° N.) and with the Sun on the 19th, becoming visible again as a morning star after the second week in November. In conjunction with α Virginis on November 30 (*Jupiter* 2° S.), and in very close conjunction with α Virginis on December 5 (*Jupiter* 1° N.). At the end of the year his position is in Libra about 4° W.N.W. of α Libræ.

Jupiter is of greater bulk than all the other planets of the solar system put together. Telescopically, he is a very interesting object for study. Broad dark belts separated by light bands run parallel with his equator; these vary rapidly in tint and general appearance, and contain many light and dark spots, together with other details. Of course, we only see his atmosphere, and never his surface as in the case of Mars, and the spots move with varying

velocities, proving that they are not attached in any way to the real globe of the planet. The most interesting marking ever seen is that known as the Great Red Spot which was of a bright red colour from 1878-1882, but then faded out; only the hollow or dip in the belt remains, showing its former position. During 1905 Jovian details have been rather faint as compared with former years, and observers should be on the watch for a renewed outbreak of spots and markings, and perhaps an intensification of the Red Spot itself. At intervals of 12 days (which include 29 rotations) the Red Spot hollow becomes central on Jupiter's disc at nearly the same time as before. So that should the observer see it central at any special date and time he can calculate its next transit by adding 9h. 55m. 40s., which is the mean rotation period.

TRANSIT TIMES OF RED SPOT ON JUPITER.

1910.	H. M.	1910.	H. M.
May 9 ... 9 12		June 16 ... 10 39	
" 11 ... 10 50		" 21 ... 9 47	
" 16 ... 9 58		" 23 ... 11 25	
" 21 ... 9 8		" 28 ... 10 35	
" 23 ... 10 47		July 3 ... 9 44	
" 28 ... 9 55		" 5 ... 11 22	
June 2 ... 9 4		" 10 ... 10 31	
" 4 ... 10 43		" 12 ... 12 10	
" 9 ... 9 51		" 17 ... 11 17	
" 11 ... 11 30		" 22 ... 10 27	

If a pretty good telescope is directed to Jupiter at these times the Red Spot and great bay or hollow in the southern equatorial belt of the planet will be observed just above, or south of the central part of the disc. The times are given on the basis that the longitude of the markings alluded to will be about 24 degrees in the summer months of 1910. But their places in longitude vary from month to month in a variable and irregular manner, so that exact predictions of the transit times of the spots cannot be given. *Jupiter's* revolution period is 11.86 years at a mean distance from the Sun of 483,000,000 miles. Polar diameter is 24,570 miles, equatorial diameter 50,190 miles. Under propitious circumstances, *Jupiter* comes within 359,000,000 miles of the Earth.

Jupiter's Satellites.—The four brightest satellites will be on the same side of the planet on the following dates:—

SATELLITES ON WEST SIDE.

Jan. 10. 4 a.m.	
" 17. "	
Mar. 1. 2.30 a.m.	
" 8. 1 a.m.	
" 22. "	
Apr. 4. 12 midnight.	
May 10. 12 p.m.	
June 14. 10 p.m.	
July 16. 9 p.m.	
" 30. "	
Sept. 4. 7 p.m.	
" 18. "	
Dec. 28. 6 a.m.	

SATELLITES ON EAST SIDE.

Jan. 8. 4 a.m.	
" 22. "	
Feb. 5. 2.30 a.m.	
" 12. "	
Apr. 16. 12 midnight.

Aug. 3.	10.43 p.m.	"	1.22 a.m. on 4th.
" 11.	3.0 a.m.	"	5.38 a.m.
Sept. 8.	2.26 p.m.	"	10.58 p.m.
Dec. 11.	6.16 a.m.	"	8.8 a.m.

Callisto (*Sat. IV.*) does not transit this year, but the shadow will cross Jupiter's disc on January 26, at 2.19 a.m., egress 3.14 a.m.

Only Satellite IV. will be visible at 2.30 a.m. February 24—Satellite II. being in transit, Satellite III. occulted, and Satellite I. eclipsed.

Conjunctions of two or more of the four brightest satellites will occur on the following dates:—

Date.	Time.	Name of <i>Sat.</i> and position.
Feb. 14.	2.30 a.m.	III. and II. on W. side
" 21.	"	III. and II. on W., and IV. and I. on E. side.
" 28.	"	II. and III. on W.
Mar. 10.	1 a.m.	I. and III. on W.
" 17.	"	III. and I. on W., and II. and IV. on E.
" 27.	"	III. and IV. on E.
Apr. 21.	12 midn't	III. and II. on W.
May 5.	11 p.m.	I., II., and IV. on E.
" 24.	"	III. and II. on W.
June 24.	10 p.m.	I. and IV. on E.
July 2.	9 p.m.	II. and IV. on W.
" 10.	"	III. and IV. on E.
" 23.	"	I. and III. on W.
Aug. 7.	8 p.m.	III. and I. on E.
" 23.	"	I., II., and IV. on E.
Sept. 15.	7 p.m.	III. and I. on E.
Dec. 3.	6 a.m.	III. and IV. on E.
" 8.	"	I., II., and III. on E.
" 25.	"	II. and III. on E.

SATURN.

Saturn is visible in the evenings in Pisces near the Equator. He rises at about noon and sets after midnight on January 1. He is at quadrature to the Sun on the 7th. He will be a morning star towards the end of May in the extreme S. of Aries.

On August 20 Saturn is stationary in Aries $3\frac{1}{2}^{\circ}$ N. of β Ceti, after which his course is retrograde (W.) until the end of the year. In conjunction with the Moon on September 21 at 11.30 P.M. (Saturn $1^{\circ}31'$ S.). Saturn is at opposition to the Sun, and therefore at greatest brilliancy on October 27. He is then best situated for telescopic study, being visible all night. In conjunction with the Moon on December 12 at 9.56 P.M. (Saturn $2^{\circ}2'$ S.). At the end of the year Saturn is almost midway between β Ceti and α Piscium, and 2° N. of α Piscium.

The Rings.—At the time of Saturn's opposition to the Sun in October the major axis of the outer ring will be $45^{\circ}77'$, and the minor axis $13^{\circ}60'$; the elevation of the Earth above the plane of the rings being $16^{\circ}54'4''$ S., and the elevation of the Sun above the plane of the rings $17^{\circ}6'4''$ S. They will not be open to the fullest extent until 1915.

Saturn's revolution period is $29\frac{1}{2}$ years, and his rotation 10 hours 14 mins. 24 secs. Diameter (equatorial) 76,470 miles, or nearly nine times that of the Earth.

Satellites.—Saturn has ten satellites, several of which are visible in telescopes of low power. The names and revolution periods are as follows:—

	D.	H.		D.	H.
I. Minas.....	0	22.6	VI. Titan...	15	23.3
II. Enceladus ..	1	8.9	VII. Hyperion	21	7.6
III. Thetys ...	1	21.3	VIII. Iapetus	79	22.1
IV. Dione.....	2	17.7	IX. Phoebe
V. Rhea.....	4	12.5	X. Themis ...	21	...

Phoebe and Themis were discovered by Prof. W. H. Pickering in 1898 and 1904 respectively. The orbital motion of Phoebe is retrograde, that is, like the hands of a watch, and therefore contrary to the other satellites of the "ringed planet." Titan, the largest, is about $1\frac{1}{2}$ times the size of our moon, and Iapetus about the same as that luminary. Iapetus and Titan are at greatest distance E. or W. of Saturn on the following dates:—

TITAN.

E. elongation.		W. elongation.	
D.	H.	D.	H.
Sept. 5	3.7	Aug. 28	3.2
" 21	1.7	Sept. 13	1.4
Oct. 6	23.5	" 28	23.2
" 22	20.7	Oct. 14	20.9
Nov. 7	18.3	" 30	18.3
" 23	15.8	Nov. 15	15.4
Dec. 9	13.8	Dec. 1	13.2
" 25	12.0	" 17	11.3

IAPETUS.

E. elongation.		W. elongation.	
D.	H.	D.	H.
Jan. 5	12.7	Feb. 15	9.4
June 16	10.9	July 27	16.3
Sept. 4	21.8	Oct. 14	15.1
Nov. 22	4.1		

URANUS.

Uranus is in Sagittarius. As he is in conjunction with the Sun on January 12 he will not be visible until about the end of February. In conjunction with the Moon on April 3 at 11.0 P.M. (Uranus $3^{\circ}49'$ N.); at quadrature to the Sun on the 15th; and stationary on the 30th 2° W. of a nebula numbered 4543 on Klein's Star Atlas, after which he slowly retrogrades until October 1, when he is again stationary; he will then continue his direct motion eastward. In conjunction with the Moon on May 1 at 6.28 A.M. (Uranus $3^{\circ}58'$ N.). The best time to observe Uranus is in July as he comes to opposition on the 16th, and is visible all night, being 2° S. of γ Sagittarii and 4° N.E. of λ Sagittarii on that date.

In conjunction with the Moon on August 18 at 3.45 A.M. (Uranus $3^{\circ}46'$ N.), and on October 11 at 8.4 P.M. (Uranus $0^{\circ}7'$ N.); at quadrature to the Sun on the 15th; and in conjunction with the Moon on November 8 at 4.10 A.M. (Uranus $4^{\circ}14'$ N.). At the end of the year his position is about 2° S.E. of γ Sagittarii in the eastern portion of that constellation.

Under favourable conditions, at the time of his opposition, Uranus may just be glimpsed with the naked eye. His telescopic appearance is disappointing, as markings are faint and rarely visible. His rotation period is unknown, and his revolution period is 84 years. The diameter is about 32,000 miles. He is attended by four moons, Ariel, Umbriel, Titania and Oberon, which move in a retrograde direction,

the plane of their orbits being tilted at an angle of 95° to the ecliptic.

NEPTUNE.

Neptune is in Gemini about 1° S.E. of δ Geminorum at the beginning of 1910. He is very well placed for observation as he is at opposition to the Sun on January 9; in conjunction with the Moon on the 24th at 4.5 A.M. (Neptune $4^{\circ} 5' S.$). His course is retrograde until March 28, when he is stationary, then direct until October 25, when he is again stationary, after which he retrogrades during the remainder of the year. In conjunction with δ Geminorum on April 28, the planet being less than $1^{\circ} S.$

Neptune is in conjunction with the Sun on July 12, and with the Moon on September 27 at 5.34 A.M. (Neptune $5^{\circ} 10' S.$). At quadrature to the Sun on October 15, and in conjunction with a nebula numbered 1542 on October 27, Neptune being slightly south. In conjunction with the Moon on November 20 at 7.43 P.M. (Neptune $5^{\circ} 22' S.$); and on December 18 at 5.25 A.M. (Neptune $5^{\circ} 16' S.$). At the end of the year he is close to the nebula 1522 and $2\frac{1}{2}^{\circ}$ E.S.E. of δ Geminorum.

Neptune is the most distant known planet of the solar system, and being only 28th magnitude is quite beyond naked-eye vision. His diameter is about 32,900 miles and his revolution period 165 years. So far only one satellite has been detected which performs a circuit around Neptune in 5 days 22 hours. Neptune was discovered theoretically almost simultaneously by Adams and Leverrier in 1845, and was first visually detected by Galle, of Berlin, on September 23, 1846. But few markings have been observed owing to the smallness of his disc, but he probably presents a belted aspect like Jupiter.

COMETS.

Comets.—The majority of comets appear to revolve in parabolic orbits or in such vastly extended ellipses that they exhibit little deviation from the parabola, and to have very long periods of revolution. In fact, a proportion of these bodies appear to have periods amounting to many thousands of years, and in a few instances to hundreds of thousands of years. Comets belonging to the class revolving around the Sun in comparatively limited times are in the minority, but our knowledge of them is constantly on the increase. One well-known family of comets is known as the Jovian group, as the more remote section of their paths lies near the orbit of Jupiter, and this great planet is supposed to have materially brought about this arrangement by powerful attraction exercised upon them in past ages.

The small periodical comets, numbering about 30 members, and revolving around the Sun in periods differing from 3 to 5 years, are entitled to special interest from the well-known character of their orbits and the fact that they may be re-observed again and again similarly to the well-known planets of the solar system. The majority of these short-period comets extend their flights to a little distance outside the path of Jupiter, and approach the Sun to about the average distance of Mars. About 34 of these objects are now known to exist, and the number is being frequently augmented by the persevering efforts of those keen-sighted and patient observers who sweep the sky in quest of them. It appears that though

new comets of short period are being introduced by means of planetary perturbations (for which Jupiter is mainly responsible), there are others which meet with disturbances in pursuing their paths sufficiently forcible to endanger, if not to terminate, their visible existences. Biela's double comet has not reappeared during the last half a century, and its materials seem to have been distributed into a stream of November shooting stars. Broesen's comet has also been missing, and may have followed the same fate. The materials of which these presumably lost comets were composed no doubt still exist and revolve around the Sun in regular periods, but it is doubtful whether they will ever be viewed again under the same aspect as formerly. As an example of the increase in the number of known periodical comets, it may be stated that during the 17 years from 1850 to 1866 no less than 16 new comets of short period were discovered. The following table includes details of some of the best-known comets which are predicted to return during the ensuing few years:—

Date of Return.	Period in Years.	Name of Comet.
1910. February	5.279	Tempel (1873).
May	76.680	Halley.
September	6.686	D'Arrest.
November	6.638	Tempel (1867).
1921. January	7.101	Brooks (1836).
March	7.390	Faye.
August	3.300	Encke.
1932. March	6.823	Wolf.
December	6.400	De Vico-Swift.

In some cases the circumstances will be unfavourable, and the objects will probably escape observation at their next passage through perihelion, but the majority of those included in the list will doubtless return at the computed times, and be suitably observed. It forms a most entertaining branch of astronomical work to trace a small comet threading its way amongst the neighbouring stars from night to night. Large comets appear promiscuously and with more or less suddenness, so that in the present state of our knowledge it is impossible to definitely predict the times of their apparitions. The only intimation of their approach is that given by observers who are fortunate enough to discover them and give warning of their appearance before they have visibly developed the conspicuous features which belong to comets of the largest class.

Halley's Comet, included in the above list of comets expected to return, has a much longer period than the others. Its last apparition in our skies was in 1835, when it passed the perihelion on November 16. It was computed to return to perihelion in the spring of the present year, and search for it was begun as early as the year 1903. It was not until September 21, 1909, that it was discovered by Dr. Max Wolf, of Heidelberg. It was then a very faint object, of the 16th magnitude, its position agreeing well with the predicted place. The following ephemeris was computed by Dr. Smart, of London, on the supposition that the perihelion passage would take place on April 20, 1910. The comet will approach nearest to the Earth on May 20, and will then be about 14,000,000 miles distant.

1910.	R.A.	Decl.
April 4	H. M. S.	D. M. S.
4	0 5 38	+ 3 1
8	0 1 43	+ 7 58

		R.A.	S.	Decl.	No.	Epoch.	Radiant Point. R.A. Dec.	Name of Shower.
1910.		H.	M.	S.				
April 12	23	57	58	+	7	53	Quadrantids.
16	23	54	24	+	7	49	♈ Bootids.
20	23	51	44	+	7	45	♈ Cygnids.
24	23	50	20	+	7	47	♈ Aurigids.
28	23	50	53	+	7	56	♈ Herculeids.
May 2	23	54	38	+	3	18	♈ Leonids.
6	0	3	6	+	9	5	♈ Ursids.
10	0	21	35	+	10	30	♈ Virginids.

18	3	7	19	+	18	51	♈ Lyrids.
22	7	3	4	+	15	14	♈ Aquarids.

Comet's calculated brightness on May 6 = 12.6, May 10 = 12.2, and on May 14 = 6.5. It should be a fine object in May, but twilight and solar glare will materially reduce its conspicuous effect. After the middle of April the comet will take a rapid flight eastwards and successively traverse the constellations, Pisces, Cetina, L. region of Taurus, Orion, Monoceros, Hydra and Leo.

METEORIC SHOWERS.

Meteor Shower.—Fireballs, meteors, shooting stars, or falling stars, as they are differently called, represent one and the same class of objects, the distinction being only one of size. They are visible in varying number on every night of the year, and are sometimes so abundant as to form impressive showers. There were brilliant and plentiful displays of the November Meteors, called Leonids, in the years 1799, 1833, 1866, 1898, and less striking exhibitions of the same objects in 1901 and 1902. It is not to be expected, however, that this particular system of falling stars will again show itself prominently until the years 1933 to 1937. The meteors appear numerously every 33 years, but it appears that just before their last return the planet Jupiter disturbed their orbit so much that the main collection of meteors was enabled to avoid encountering the Earth, and the observed showers were more scanty than usual. But some of the meteors are visible every year, and furrow the morning sky with their rapid flights and luminous streaks at the middle of November. This meteoric system appears to be identical with, and its material actually derived from, a periodical comet, which was discovered by Tempel in December, 1865. In November, 1910, very few of these Leonid meteors are expected in our skies, but observers should maintain an attentive watch for them at the important time. The maximum date is usually the morning of November 15 or 16, but it varies a little owing to leap year. Whenever any conspicuous meteors are seen, whether during a rich shower or on an ordinary night, their paths amongst the stars should be carefully and accurately recorded. The same advice applies to occasional fireballs, which often appear suddenly and startle spectators by lighting up the heavens very vividly for two or three seconds. Observers should always remember that mere descriptions of the brilliancy or general situation of these phenomena are practically useless for scientific purposes. What is required by those who critically discuss such observations relates specially to the exact path of the object in the heavens and to the duration of its visible flight. The following is a table of the radiant points of some of the more prominent meteoric streams visible during the year:—

		R.A.	S.	Decl.	No.	Epoch.	Radiant Point. R.A. Dec.	Name of Shower.

50	Dec. 7-10	119°	29'	0°	50	Dec. 7-10	119° 29'	♈ Geminids.
51	Dec. 22-29	184°	32'	0°	51	Dec. 22-29	184° 32'	♈ Canis Venetids.

The Perseids (No. 29 in the foregoing list) display some singular characteristics, for they probably continue visible for more than a month, during which period their radiant point exhibits a diurnal motion of about 1° to the E.N.E. The places of this radiant on alternate days during about four weeks of the chief activity of the shower are as follows:—

DATES AND POSITIONS OF PERSEID RADIANT.

Date.	Radiant R.A. Dec.	Date.	Radiant R.A. Dec.

Telescopic Powers Suitable for Observing Celestial Objects. 91

COMETS, and large nebulae such as those in Orion and Andromeda, require very low powers and an extensive field of view, so that the objects may be viewed in their entirety, and their light sufficiently concentrated to display the fainter portions. If it is decided to critically examine the structure of a comet's nucleus or details of form in a nebula, then powers of 150 or 200 may be used. The cluster in Hercules (Messier 73) is splendidly resolved with 200 on a 10-in. reflector.

The spots on the Sun may be very distinctly seen in any small telescope, care being taken to protect the eye with deeply-tinted glass. A 3-in. refractor, powers from 60 to 100, reveals the solar markings in detail and under many varieties of form and grouping. The craters, mountains, clefts, and ridges of the Moon are satisfactorily seen in general outline with 50 and 75, though, for features of small extent, powers of 300 and 400 are necessary on a 10 or 12 in. glass. Solar and lunar eclipses are best visible under low powers, with fields sufficiently ample to include a picture of the whole phenomenon.

The phases of Mercury may be discerned with 175 or 200, but the air must be steady and the object not very near the horizon; those of Venus are plain with far less power. These planets appear under the most satisfactory aspect near the period of sunrise or sunset, and indeed all observations of conspicuous planets are best made at such times. When the image is surrounded with dark sky the glare from a bright object is sometimes troublesome, for it is apt to aggravate telescopic defects and obliterate faint details.

The chief spots on Mars, such as the *Syrtis Major* and *Aëtiolum Mare*, may be distinguished with 90 on a 2-in. refractor, but powers of 300 and 350 and an 8-in. refractor or 10-in. reflector are desirable to exhibit the outlines of the fainter, narrower markings, many of which are delicate, intersecting lines suggesting a canal-form structure of surface.

Jupiter's equatorial belts are perceptible in a 1½-in. telescope, power 40, but for studying their variable appearances and the different velocities of the bright and dark spots 200 and 250 are requisite on a much larger instrument. The writer has successfully employed 1540 with

a 12½-in. reflector on Jupiter, but found no advantage over powers of 200 to 440. The four bright satellites are visible in an opera-glass. Dark transits of Satellites III. and IV. and their shadows may be observed with a 3-in. refractor and power of 120 or 150.

Saturn and Mars usually appear well defined under higher powers than Jupiter. The division in Saturn's ring and his principal dark belt are to be readily glimpsed, when the system is sufficiently inclined, with a 2½-in. glass, power 120. But magnifiers of 250 to 350, and greater aperture, are essential to reach the delicate features of the planet, such as the spots which appeared in his northern hemisphere in 1903. A good 4½-in. refractor will occasionally show Encke's division in the ring when this feature is visible, but at the best it is only a faint pencil-like marking; also the interior trapezoid and five of the satellites; but the night must be good. Titan is visible in any small telescope, and Iapetus is sometimes an easy object, but Tethys, Rhea, and Dione are much more difficult, requiring careful scrutiny of the region just outlying the rings, where they will be usually recognised as tiny points of light.

In planetary work the observer will ultimately find it an advantage to accustom himself to one and the same power. If on special occasions or for particular purposes really high magnifiers are employed, they should be single lenses, as they possess a decided advantage in light and definition at the centre of the field.

Occultations of stars by the Moon may generally be well observed with a 3-in. glass, power 50 to 75.

For double stars the eye-piece required will depend in a great measure upon the character of the object. For very close pairs, high powers, such as 300 or 400, and even more, are sometimes desirable, but in cases where the components are distant and the magnitudes differ considerably, as Vega, Polaris, or Rigel, then a moderate power, such as 100 or 150, will give excellent results. For showing variable stars a good field-glass is to be recommended. For groups of stars a comet eyepiece, power 25 or 30 and field about 1½°, will be best. The latter would also be well adapted for comet-seeking, and for general views of large comets, nebulae, and parts of the Milky Way.

Standard Time.

STANDARD TIME, referred to the meridian of Greenwich, has been adopted for railways and other purposes in the countries mentioned in the following table:—

Country.	Central Meridian.	Fast or Slow on Greenwich Time.	Country.	Central Meridian.	Fast or Slow on Greenwich Time.
Mid-Europe	15° E. 1h. fast.	South Australia ...	142½° E. 9½h. fast.
East Europe			Victoria		
British S. Africa	30° E. 2h. fast.	New South Wales		
Egypt			Queensland	150° E. 10h. fast.
Maauritius, &c.	60° E. 4h. fast.	Tasmania		
Chagos Archipel...	75° E. 5h. fast.	New Zealand	172½° E. 11½h. fast.
India	82½° E. 5½h. fast.	Iceland	15° W. 1h. slow.
Calcutta	90° E. 6h. fast.	America.		
Burma	97½° E. 6½h. fast.	Atlantic	60° W. 4h. slow.
Straits Settle-ments	105° E. 7h. fast.	Eastern	75° W. 5h. slow.
Hong Kong			Central	90° W. 6h. slow.
Borneo	120° E. 8h. fast.	Mountain	105° W. 7h. slow.
West Australia...			Pacific	120° W. 8h. slow.
Japan, Corea	135° E. 9h. fast.	Greenwich Time is used in Spain, Belgium, Gibraltar, and Farøe (Sheep Islands).		

MEAN RIGHT ASCENSION AND DECLINATION OF ONE HUNDRED FUNDAMENTAL STARS, VISIBLE AT GREENWICH, FOR JANUARY 1, 1910.

NAME OF STAR.	Mag.	Right Ascension.		Annual Precess.	Declination.		Ann. Prec.	EXPLANATION OF THE ASTRONOMICAL TABLES.
		H. M. S.	S.		° ' "	"		
α Andromede	2.1	0 34 40	+3.08	+28 35 37	+20.0			Mean Right Ascension.
γ Pegasi	2.9	0 8 35.0	+3.09	+14 41 0	+20.0			The Mean Right Ascension and Declination for any other year may be found from this table by multiplying the annual precession by the number of years elapsed, and applying the result to the quantities given in the table.
α Cassiopeia	var.	0 35 23.6	+3.38	+56 2 38	+19.8			If the required date be earlier than 1910, the signs of the annual variations must be changed. In applying the corrections, to reduce to any other date, to the Declinations, it must be borne in mind that N. Declination means + and S. Declination —, and that the corrections must be added algebraically.
β Ceti	2.2	0 39 4.4	+3.00	-18 28 49	+19.8			Configuration of Jupiter's Satellites.
ϵ Piscium	4.5	0 58 16.3	+3.12	+7 24 21	+19.4			This column exhibits, at the particular hour mentioned, the respective position of Jupiter and his Satellites as seen in an inverting telescope. The white circles represent the Planet, and the numerals 1, 2, 3, and 4 the respective Satellites, those on the left hand being west of the Planet; a black circle is intended to show either that the Satellite whose numeral it stands in the place of is in the shadow of the Planet (eclipsed) or else is behind the disc of Jupiter (occulted); the sign γ indicates that the Satellite in question is on the disc of the Planet.
θ Ceti	3.8	1 19 31.5	+3.00	-8 38 51	+18.9			Sidereal Time at Mean Noon.
α Ursæ Minoris (Pole Star)	2.1	1 26 55.9	+27.33	+88 49 34	+18.6			This column indicates the Sidereal Time at Mean Noon on each day of the year, and is the time which the Observatory or astronomical clock should show when the Mean Time clock points to Noon, and, in connection with the table on p. 75, serves to convert Mean Solar into Sidereal Time.
η Piscium	3.7	1 26 39.9	+3.20	+14 52 56	+18.6			Mean Time at Sidereal Noon.
β Arietis	2.7	1 49 39.9	+3.30	+20 22 6	+17.8			This column indicates the time which should be shown by the Mean Time clock when the first point of the sign Aries is on the meridian, or, in other words, when it is Sidereal Noon, and is useful for changing
α Arietis	2.2	2 5 8	+3.36	+23 2 14	+17.3			
γ Ceti	3.0	2 38 38.1	+3.12	+2 51 25	+15.4			
α Persæ	2.8	2 57 34.4	+3.13	+3 44 14	+14.3

Mean Right Ascension and Declination of 100 Fundamental Stars. 93

NAME OF STAR.	Mag.	Right Ascension.		Annual Precess.	Declina- tion.	Ann. Prec.	Sidereal into Mean Solar Time with the help of the table on p. 76.
		H. M. S.	S.				
α Ophiuchi	3.4	16 53 24.4	+ 2.86	+ 9 30 52	- 5.7		Following the Phases of the Moon on the first page of each month there will be found, as well as the times of Apogee and Peri- gee, the corresponding dis- tances from the Earth to the nearest 100 miles.
α ¹ Herculis	var.	17 10 32.6	+ 2.74	+ 14 29 32	- 4.3		The mean distance of the Moon from the Earth is 238,840 miles.
β Ophiuchi	3.4	17 16 28.8	+ 3.68	- 24 54 38	- 2.8		Under the head "Eclipses, Occultations, and other Celestial Phenomena," in each month, will be found the "Mean Time of the Sun's Semidiameter passing the Meridian" for the 5th and 20th days. This will be useful in determining time by the Diploidscope or similar instrument, when, from the interference of clouds, &c., only one limb of the Sun is observed.
β Draconis	3.0	17 28 23.9	+ 1.35	+ 52 22.4	- 2.8		From the values on the 5th and 20th, that for any other day can be easily inferred with sufficient accuracy, the change in the apparent semi- diameter being very slow.
α Ophiuchi	2.7	17 30 45.4	+ 2.78	+ 12 27 30	- 2.5		
μ Herculis	3.5	17 42 56.1	+ 1.37	+ 27 46 22	- 1.5		
β Draconis	2.4	17 54 31.0	+ 1.39	+ 51 29 57	- 0.5

γ Pegasi	3.6	22 36 58.4	+ 2.99	+ 10 21 41	+ 18.7		
α Piscis Australis (Pomathaut)	1.3	22 52 43.8	+ 3.30	- 30 5 58	+ 19.2		
α Pegasi (Markab)	2.6	23 0 16.6	+ 2.98	+ 14 43 15	+ 19.4		
γ Cephei	3.8	23 12 30.0	+ 3.06	+ 2 47 25	+ 19.6		
γ Cephei	3.4	23 35 38.8	+ 2.45	+ 77 4 48	+ 19.9		
α Piscium	4.0	23 54 41.3	+ 3.07	+ 6 21 54	+ 20.0		

α¹ Herculis, magnitude ranges from 3.1 to 3.9. β¹ Lyrae, magnitude ranges from 3.4 to 4.5.

MEAN RIGHT ASCENSION AND DECLINATION OF SOME FUNDAMENTAL STARS, VISIBLE IN THE SOUTHERN HEMISPHERE, FOR JANUARY 1, 1910.

NAME OF STAR.	Mag.	Right Ascension.		Annual Precess.	Declina- tion.	Ann. Prec.	α CENTAURI.
		H. M. S.	S.				
β Hydri	2.9	0 21 2.2	+ 2.51	- 77 45 40	+ 20.0		It is supposed that this star, one of the brightest in the Southern Hemisphere, is the nearest of the fixed stars to the Earth. Dr. Gill gave to it a paralax of 0.75", which would make its distance from the Earth 275,000 times that of the Sun. At the rate at which light travels through space, it would require four years and four months to reach the Earth from this star.
α Eridani (Achernar)	0.5	1 34 21.8	+ 2.23	- 57 41 38	+ 18.4		
γ Hydri	3.1	3 48 37.3	- 0.98	- 74 30 54	+ 10.9		
α Argus (Canopus)	1.0	6 21 57.2	+ 1.33	- 52 38 47	- 1.9		
α Argus	2.2	9 14 40.8	+ 1.61	- 58 53 50	- 15.1		
γ Argus	var.	10 41 34.0	+ 2.32	- 59 12 40	- 18.9		
β Chamaeleontis	4.3	12 13 2.7	+ 3.46	- 78 48 45	- 20.0		
α ¹ Crucis	1.0	12 21 35.0	+ 3.32	- 62 36 1	- 20.0		
β Centauri	0.8	13 57 27.8	+ 4.21	- 59 56 21	- 17.5		
α ² Centauri	1.0	14 33 29.4	+ 4.54	- 60 27 44	- 15.7		
α Trianguli Australis	1.9	16 39 7.5	+ 6.32	- 68 51 49	- 6.9		
σ Octantis	5.5	19 16 26.9	+ 97.82	- 89 14 18	+ 6.6		
α Pavonis	2.0	20 18 32.0	+ 4.77	- 57 1 27	+ 11.4		
α Gruis	1.9	22 2 33.9	+ 3.78	- 47 23 51	+ 17.5		

γ Argus, magnitude varies from 1 to 7.5.

SIGNS OF THE ZODIAC.

♈ Aries, the Ram; ♉ Taurus, the Bull; ♊ Gemini, the Twins; ♋ Cancer, the Crab; ♌ Leo, the Lion; ♍ Virgo, the Virgin; ♎ Libra, the Balance; ♏ Scorpio, the Scorpion; ♐ Sagittarius, the Archer; ♑ Capricornus, the Goat; ♒ Aquarius, the Water-Bearer; ♓ Pisces, the Fishes.

ASTRONOMICAL DEFINITIONS.

THE time used throughout this Almanack, with the one exception of that of High Water at Dublin, is Greenwich Mean Time, or the time which should be shown by a well-regulated clock; the column headed "Sun before or after Clock" gives the difference between mean and apparent time, or the time as shown by the Sun.

N. North; S. South; E. East; W. West.

h. hours; m. minutes of time; s. seconds of time; ° deg. of arc, or thermometer; ' minutes of arc; " seconds of arc.

Conjunction.—A Planet is said to be in Conjunction with another body when it has the same longitude, and is seen in the same direction in the heavens. It is obvious that in the case of the inferior Planets this Conjunction will be of two kinds—the one when the Planet is between the Earth and the Sun, called *inferior* Conjunction; and the other when at the opposite point of its orbit, with the Sun between the Planet and the Earth, called *superior* Conjunction. The latter is the only kind of Conjunction that can happen to the *superior* Planets, Mars, Jupiter, Saturn, Uranus, and Neptune; the *inferior* Planets, Mercury and Venus, being subject to both kinds.

Opposition.—A Planet is said to be in Opposition when it is distant from the Sun 180° of longitude, at which time it is most brilliant, south about midnight, and is, generally, at its least distance from the Earth.

Elongation.—The inferior Planets, in their revolutions round the Sun, appear to an observer on the Earth to swing pendulum-like from side to side, being alternately east and west of the Sun; the greatest Elongation is the termination of one of the swings, either east or west; and at these times the Planet appears, when viewed through a telescope, like the Moon in her first quarter if the Elongation be in the east, and like her last quarter if west. Both Mercury and Venus exhibit these phases, passing from new to full while moving from inferior to superior Conjunction, and from full to new again while passing from superior to inferior Conjunction.

Occultation.—It often happens that the Moon in her orbital motion passes before, and hides from a spectator on the Earth, certain of the fixed Stars, and occasionally one or other of the Planets; these occurrences are called *Occultations*. Among the "Celestial Phenomena" are given the times at which certain of these Occultations take place, as well as the exact point on the Moon's limb where the observer is to look for the phenomenon; this point is reckoned from the true vertex, or highest upper portion of the Moon's image, counting continuously towards the East from 0° to 360°. The disappearance always takes place on the left-hand side of the Moon, and the reappearance on the right, but *vice versa* when viewed through an inverting or astronomical telescope. Stars to the sixth magnitude inclusive have been included in this summary.

Southing.—The Time of *Southing* is the time at which the heavenly bodies pass the Meridian, and is so called because they are then due south. The Meridian being a great circle passing through the Pole and Zenith of the place, the *southing* will also be the time when they attain their greatest altitude above the horizon.

Rising, Setting, Right Ascension, and Declination of the Planets Uranus, Neptune, Ceres, Pallas, Juno, and Vesta, 1910, about the times of opposition, at Mean Noon of the respective dates.

No Opposition of Juno in 1910; the last Opposition took place on November 30, 1909.

The times of *Southing* of each of the above planets may be obtained with sufficient accuracy by taking the arithmetical mean between the times of *Rising* and *Setting*.

A Table of the Kings and Queens of England.

Millard Fillmore (elected as Vice-President)	1850	William Howard Taft	1909

THE line (or rather lines) of native sovereigns is a very long one; some Irish historians have traced the succession to about the period of the Flood, "before which time there were many princes," but, unfortunately, the records have not been preserved. According to Keating, the first sovereigns after the Milesian Conquest, of whom there is any "absolute certainty," were Heber and Heremon, Milesian princes from Galicia in Spain, who conquered Ireland, and gave to its throne a race of 171 kings. These two princes reigned jointly from the year 1300 B.C. till 1291, when

Heremon alone ruled. Of their successors, who reigned from the year 1285 B.C. to the Christian Era, about 169 in number, only fifteen died comfortably in their beds; four died of the plague or some malignant distemper, the rest being assassinated, killed in battle, or dying other violent deaths. Home Rule was in existence from the earliest times till after the Conquest of Ireland by Henry II. in 1172; the Rulers, however, appear to have had anything but a peaceable, quiet time.

The following is an "authentic list" of—

IRISH SOVEREIGNS AFTER THE BIRTH OF CHRIST.

Fearaidhach-Fionnachtna—"a most just and good prince"; slain by his successor.....	4
Fiachadh-Fion—slain by his successor.....	24

Physicians in Ordinary, Sir J. Williams, Bt., M.D.; A. J. R. Oxley, M.D.

Surgeon in Ordinary, Edgar Hoffmeister, M.B.

The Peerage.

In a broad sense this heading is commonly taken as identical with the one that follows; but there are close upon 130 holders of titles of long-standing nobility who are not members of the Upper House of Parliament, their peerages being those of Scotland or Ireland only. But, as further explained below, there are about an equal number of Peers of those kingdoms who possess additional titles which constitute them members of the Lords, these titles being in a majority of instances, though very far from all, inferior to those by which they are generally known. A considerable complication is the result, but to lessen the trouble of reference we have now arranged all Peers of the same rank under a single alphabet for that rank, distinguishing every Peer whose title is Scottish or Irish, and also such of these as possess Imperial titles in addition. The full details as to each are given under his leading title, and a reference is in every case supplied under any other that he may hold, so that the table of equivalent titles formerly given in this work is no longer needed: a double index will be found in "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE," pages 40-1.

THE HOUSE OF LORDS,

the *Magnum Conciliū* of the early chroniclers, consists of the Spiritual Lords of England (the 2 Archbishops and 24 of the Bishops), the Temporal Peers of England, Great Britain, and the United Kingdom, and of Representative Peers of Scotland and Ireland, together with such Scottish and Irish Peers as have also Imperial titles. No Peer can take his seat if he be under age, of unsound mind, or bankrupt. The full Assembly would consist of 3 Princes of the Blood Royal, 2 Archbishops, 22 Dukes, 22 Marquesses, 124 Earls, 40 Viscounts, 24 Bishops, 334 Barons, and 16 Scottish and 18 Irish Representative Peers: total 616. See WHITAKER'S PEERAGE, page 18, for complete table, showing numbers of Life Peers, Minors, &c. There are also 12 Ladies who are Peeresses in their own right, whose titles and names, along with those of Scotland, are given below at page 200. Female succession may occur in the Imperial Peerage in any Barony of England which was conferred by writ of summons; but it is subject to the rule of *abeyance* whenever there are more than one daughter, sister, &c., eligible to succeed. There are also a few cases in which "special remainders" have been granted to female relatives in the absence of males. We use the term "Imperial" as including the three series of Peers of "England" (up to June 20, 1707), "Great Britain" (thence till close of 1800), and "United Kingdom" (1801 onward).

SCOTTISH AND IRISH PEERS.

There are in all 87 Scottish Peers and 175 Irish, but of the total 262 there are 133 possessing Imperial titles and 129 without them. Of the 87 Scottish, 51 have Imperial titles and 16 are elected or re-elected every Parliament to sit in the Lords; and similarly of the 175 Irish 82 hold Imperial titles, and 28 are elected for life. Of the Imperial titles of the two kingdoms there are 75 which are inferior to the native ones, 30 are superior, 12 are identical in rank but differing in designation, and 15 are absolutely the same. Of the 3 Scottish Peeresses cited on page 119, that of Melfort is subject to a degree of doubt, so that the lady does not assume it. There are other lines in the Scottish Peerage which are open to female succession, and this is not subject to *abeyance* as in England. In the Irish Peerage, on the other hand, the only titles open to female succession are the Massereene Viscounty and the La Poer Barony, the latter now held by the Marquess of Waterford. It will be observed that Ireland possesses a great advantage over Scotland in the Lords as it does in the Commons, its native Peers who hold Imperial titles numbering, as just stated, 82 as against 51 of Scotland, and its elected Representative Peers 28 as against 16. An Irish Peer who holds no Imperial title has also the special privilege of being able to seek election to the Commons for any constituency not in Ireland itself.

Contractions.—S, or I, appended to the date of creation denotes a *Scottish* or *Irish* title; the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as *Engl.*, *Brit.*, or *U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. A † appended to S or I, implies that the Peer is an elected Representative to the House of Lords. For the mark ° see heading to Marquesses; b, signifies born; s., succeeded; m., married; w., widower or widow; div., divorced; M., minor.

COMPLETE LIST OF THE PEERS.

The Order of Merit—O.M.

INSTITUTED 26th June, 1902.

MEMBERS.

Membership is of two kinds, Military and Civil; the former having crossed swords, and the latter oak leaves, upon the badge. Membership of this Order confers no precedence, but those holding it are authorised to place the letters O.M. after the G.C.B. and before the other Orders.

Field-Marshal Earl Roberts of Kandahar, V.C.
K.G., K.P.

Field-Marshal Viscount Wolsley, K.P.

Field-Marshal Viscount Kitchener, G.C.B.

Viscount Morley of Blackburn.

Lord Rayleigh, F.R.S.

Lord Lister, F.R.S.

Admiral of the Fleet Rt. Hon. Sir Edward Hothart
Seymour, G.C.B.

Sir William Huggins, F.R.S.

Field-Marshal Sir George Stuart White, V.C., G.C.B.

Sir Laurence Alma-Tadema.

Admiral of the Fleet Sir John Fisher, G.C.B.
(created a Peer, 9 Nov., 1909).

William Holman-Hunt.

Earl of Cromer.

Rt. Hon. James Bryce.

Sir Joseph Dalton Hooker.

Field-Marshal Prince Yamagata.

Field-Marshal Prince Oyama.

Admiral Count Togo.

Miss Florence Nightingale.

Professor Henry Jackson.

Alfred Russel Wallace.

Secretary and Registrar, Col. Hon. Henry Chas.
Legge, C.V.O.

The House of Commons.

THE second Parliament of King Edward VII. was elected in January and February, 1906, and was opened by the King on 19 Feb. of that year. The General Election had returned 512 Ministerialists (374 Liberals; 54 Labour Members; 84 Nationalists) and 158 Opposition (131 Conservatives and 27 Unionists), distributed as shown in the following table:—

	DISTRIBUTION OF MEMBERS.				POSITION AS TO PARTIES (1906).		
	Counties.	Boroughs.	Universities.	Total Members.	Ministerial.	Opposition.	Majority.
England	234	226	5	465	337	128	209 Min.
Wales.....	19	11	—	30	30	0	30 Min.
Scotland	39	31	2	72	61	11	50 Min.
Ireland	85	16	2	103	84	19	65 Min.
United Kingdom	377	284	9	670	512	158	354 Min.

From 1 Nov., 1908, to 31 Oct., 1909, there were bye-elections at *Attercliffe (Lab.)*, *Bermondsey (C.)*, *Chelmsford (C.)*, *Cleveland*, *Croydon*, *Mid-Derby*, *High Peak*, *Stratford-on-Avon (C.)*, *Tamworth*, *Taunton*; *East Denbighshire*; *Dumfries*, *Edinburgh City* (East, South, and West), *Forfarshire*, *Glasgow Central (C.)*, *Hawick*; *South Armagh*, *West Clare*, *Cork City*, *South Kilkeny*, *East Limerick*, and *North Sligo*. Constituencies in italics were won by the political party indicated in parentheses.

At the time of going to press there was a vacancy at Portsmouth.

On 31 Oct., 1909, the parties stood as follows: Liberal and Labour, 385; Labour (L.R.C.) Members, 33; Socialist, 1; Nationalists, 83. Ministerial total, 503. Opposition total (Conservatives and Liberal Unionists), 167. Ministerial majority over Unionist Opposition, 336.

The total number of electors upon the register in 1909 is given below, together with the Registrar-General's estimate of the population in the middle of the year 1909:—

Division.	Electors.	Population.
England and Wales ...	6,156,441	35,756,615
Scotland	771,388	4,877,648
Ireland	687,609	4,374,158
United Kingdom	7,615,438	45,008,421

POLITICAL PARTIES AND ORGANISATIONS.

The principal political organisations are as follows:—

LIBERAL.—The *Liberal Central Association*, 41, Parliament Street, Westminster, S.W., is the official organisation and headquarters of the Liberal Party. The *National Liberal Federation*, 42, Parliament Street, Westminster, S.W., is a union of Liberal Associations in England and Wales. The *Liberal Publication Department*, under the combined auspices of the two above bodies, and of the same address, issues periodical literature and political magazines. Among other organisations the *National Reform Union*, 5, Cross Street, Manchester, and 10, Adelphi Terrace, W.C., founded in 1864 for the advocacy of electoral reform and opposition to Protection, aims at inculcating Liberal principles by means of lectures and the distribution of literature; the *Eighty Club*, 3, Hare Court, Temple, E.C., was founded in 1880, and works on similar lines; the

Liberal League, 20, Queen Anne's Gate, S.W., was formed for the purpose of bringing together, with a view to common action, all those who approved of the policy expounded by Lord Rosebery at Chesterfield, December 16th, 1901; *Home Counties Liberal Federation*, 42, Parliament Street, S.W.; the *London Liberal Federation*, 42, Parliament Street, S.W.; the *Women's Liberal Federation*, 124, Victoria Street, S.W.; and the *Women's National Liberal Association*, 128, Palace Chambers, Westminster, S.W. The *Scottish Liberal Association* is at 7, West George Street, Glasgow, and at 95, Princes Street, Edinburgh; the *Scottish Women's Liberal Association* is at the Glasgow office. The *Chief Liberal Whip* (Patronage Secretary to the Treasury) is Rt. Hon. J. A. Pease. *Other Whips*, Capt. C. W. Norton, J. H. Whitley, and O. Parlington, with J. W. Gulland (for Scotland), Sir E. Strachey, and J. M. F. Fuller.

CONSERVATIVE.—The *National Union of Conservative and Constitutional Associations*, St. Stephen's Chambers, Westminster, S.W., was founded in 1867, and is a federation of Conservative and Constitutional Associations and Clubs in England and Wales. As constituted at present, it consists of 38 Provincial Divisions, a Council of about 200 members, which meets quarterly, and a Conference, which meets annually. It has five Committees, viz: Executive, Organisation, Publication, Lecture, and Finance, which have the important duties of strengthening, stimulating, and creating electioneering organisation in the constituencies, publishing and distributing the whole of the literature for the education of the electorate, and providing and controlling the staff of speakers and lecturers. *Secretary*, Thomas Cox. The *Conservative Central Office* is the Parliamentary department; *Principal Agent*, Percival Hughes. The *National Union of Conservative Associations for Scotland* is at 1, Castle Street, Edinburgh. The *Primrose League*, 64, Victoria Street, S.W., founded in 1883, is the educating body, and aims at the Maintenance of Religion, of the Union, and of the ascendancy of the British Empire: *Grand Master*, Rt. Hon. A. J. Balfour, M.P.; *President Ladies' Council*, Miss Balfour; *Registrar*, F. Willis; *Clerk of the Council*, R. Bennett. The *Conservative Whips* are Sir A. Acland Hood, Viscount Valentia, H. W. Forster, Lord Balcarres, Marquess of Hamilton, H. P. Pease, and Lord Edmund Talbot.

LIBERAL UNIONIST.—The *Liberal Unionist Council*, 6, Great George Street, Westminster,

was formed in 1886, and re-constituted in 1904. Its main object is the prevention of the separation of the governments of Great Britain and Ireland. *President*, Rt. Hon. J. Chamberlain, M.P.; *Sec.*, J. Boraston.

LABOUR.—The Labour Party in Parliament is composed of 33 Labour Party nominees. The Parliamentary organisation is the *Labour Party*, 28, Victoria Street, Westminster, S.W., which selects candidates, pays a proportion of the Returning Officers' expenses, and contributes £200 a year towards the maintenance of elected members. *Sec.*, J. Ramsay MacDonald, M.P. The *Labour Whips* are G. H. Roberts and C. Duncan. In addition to the Labour Party of 33 members there are 15 representatives of the Miners' Federation, and 8 Trade Union and other representatives, the whole 23 composing the *Trade Union Group*. Under the heading of Labour may also be included one Socialist.

SOCIALISTS.—The *Social Democratic Party*, Chandos Hall, 21A, Maiden Lane, Charing Cross, W.C., and the *Independent Labour Party*, 10, Red Lion Court, Fleet Street, E.C., have many aims and some members in common. The *Fabian Society*, 3, Clement's Inn, Strand, W.C., preaches an intellectual Socialism to the middle classes.

IRISH PARTIES.—The *United Irish League* represents the Nationalist Party, and the Nationalist Whips are Capt. A. J. C. Donelan, Pat O'Brien, E. Haviland Burke, and J. P. Boland. The Irish Unionist party is represented by the *Irish Unionist Alliance*, 109, Grafton Street, Dublin. *Sec.*, R. G. Carden, D.L. *Irish Unionist Whip*, J. B. Lonsdale, M.P.

TARIFF REFORM.—The *Tariff Reform League*, 7, Victoria Street, Westminster, S.W., was founded in 1903, in furtherance of Mr. Chamberlain's proposals for the reform of the Fiscal System of the United Kingdom. *Sec.*, T. W. A. Bagley.

WOMEN'S SUFFRAGE.—The principal organisation for putting forward the claims of women to the Parliamentary franchise are the *National Union of Women's Suffrage Societies*, 25, Victoria Street, Westminster, S.W., with over 100 affiliated societies; the *London Society for Women's Suffrage*, 58, Victoria Street, S.W., is a society in the above Union, and has over 3,500 members; the *Women's Social and Political Union*, 4, Clement's Inn, W.C.; the *Women's Freedom League*, 1, Robert Street, Adelphi, W.C., which aims at securing for women a Parliamentary vote as it is or may be granted to men; the *Leicestershire and Cheshire Women's Textile Workers' Representation Committee*, 5, John Dalton Street, Manchester; and the *Women's Co-operative Guild*, Kirkby Lonsdale. The offices of the *Women's Local Government Society* are 17, Tot-hill Street, S.W. The *Women's National Anti-Suffrage League*, Caxton House, Tot-hill Street, Westminster, S.W. (*Chairman*, The Countess of Jersey; *Hon. Sec.*, Mrs. Arthur Somervell) seeks to prevent the Parliamentary enfranchisement of women. *Sec.*, Miss G. M. Alexander.

RESIGNATION OF MEMBERS OF PARLIAMENT.—No member of the Commons can resign his seat; he must apply for some office of profit under the Crown, and so vacate his seat under the Act of Settlement (6 Anne, c. 7), and the usual practice is to apply for the Stewardship of the *Chiltern Hundreds*, or of the Manor of Poynings, or North-

stead, or the Escheatorship of Munster, whereupon the seat is declared vacant and a writ issued.

AUTUMN SITTING, 1908.

LICENSING.—The House of Commons reassembled on Oct. 12, and two days later proceeded with the Committee stage of the Licensing Bill, the time to be spent upon each clause having been defined before the adjournment for the vacation. The second clause, which recognised the principle of local option, was agreed to, after some amendment, by 315 to 117; and the third clause, dealing with the time limit, was carried by a majority of 170 after considerable discussion. After the allotted period of nineteen days, the measure passed through Committee on Nov. 9, the Government granting a number of minor concessions. The report stage was commenced on Nov. 13, and the Bill was read a third time on Nov. 20, when the Lords gave it a first reading. On Nov. 24, as the result of a private meeting of the Unionist Peers, Lord Lansdowne gave notice of his intention to move the rejection of the Bill; and when on the following day the Earl of Crewe moved the second reading, Lord Lansdowne brought forward an amendment that while the House was ready to consider favourably any amendments in the law which experience had shown to be necessary, they declined to proceed further with a measure which, without materially advancing the cause of temperance, occasioned inconvenience to many of His Majesty's subjects, and violated every principle of equity in its dealings with the numerous class whose interests would be affected by the Bill. The debate only lasted two days, and although the second reading was supported by the Archbishop of Canterbury, the Bishop of London, Lord Rosebery, and several Unionist Peers, it was defeated by 272 against 96.

CHILDREN'S BILL.—On the day of the re-assembling, the Commons commenced the consideration on report of the Children's Bill, which was intended to consolidate and amend the law relating to the protection of children, and which had come down from Grand Committee. A motion to recommit the Bill in respect of the clauses for the prevention of juvenile smoking was rejected by 164 to 44. New clauses were added dealing with overlaying and giving intoxicating liquor to children under five, and on Oct. 19 the Bill was read a third time. The Lords made some alterations, and on Nov. 30 they passed the third reading. On Dec. 15 the Commons considered the Lords' amendments, and on the invitation of Mr. Herbert Samuel the House disagreed with one on the subject of the right of entry into homes. The Lords, by 192 against 17, inserted a clause taken from the rejected Licensing Bill, excluding children up to the age of fourteen from public-house bars; and on Dec. 21 the Royal Assent was given to the measure, which came into operation on the following April 1.

EDUCATION.—In the earlier part of the Session the Government's Education Bill had been given a second reading, but on Nov. 19 the Prime Minister announced that the proposals which they intended to put before the House would be presented in a new Bill, adding that he believed the Nonconformist representatives and the Archbishop of Canterbury were prepared, in order to obtain a settlement, to support the proposals of Ministers. On Nov. 25 Mr. Runciman

moved the second reading of the new measure, which recognised the right of entry, allowed contracting-out, and sought to give full public control for all rate-aided schools. The rejection was moved from the Liberal benches by Mr. Hutton, but the second reading was agreed to on the following day by 323 against 157. A Ministerial resolution for closure by compartments was on Nov. 27 adopted after a division, and on Nov. 30 the Committee stage started. Negotiations between the various bodies then took place, but no agreement was reached, and on Dec. 4 the abandonment of the Bill was announced by Mr. Asquith, who, a few days later, said their hopes of securing a national settlement had for the time being been disappointed.

PORT OF LONDON.—Another measure held over from the preceding portion of the Session was Mr. Lloyd George's Bill to set up a public authority to control the Port of London, and with but brief discussion it was sent to the Lords. The second reading was carried there without a division on Dec. 14, and the third reading three days later, after an amendment increasing the numbers of the port authority had been added. The Commons rejected this amendment, and the Lords not insisting upon it, the Royal Assent was given on Dec. 27.

MINERS' HOURS.—The report stage of the Coal Mines (Eight Hours) Bill, as amended by the Standing Committee, was commenced on Dec. 9, when the Home Secretary said he did not for a moment believe that the anticipation that there would be an enormous rise in the price of coal would be fulfilled. A number of amendments were rejected, and after the operation of the Bill in Durham and Northumberland had been suspended for six months, the third reading came on on Dec. 14. The rejection was moved by Lord Robert Cecil, but the measure was carried by 254 votes against 89. In the Lords, a motion for the rejection on the second reading was defeated by 122 against 44; and in the Committee stage amendments to exclude the two windings from the statutory eight hours, and to provide that the Bill should not come into operation until July 1, 1910, were carried, the third reading being given on Dec. 18. In the Commons, Mr. Gladstone said the Government agreed to the amendment regarding windings, though with the greatest reluctance, but they proposed to disagree with that deferring the operation until July, 1910. This proposal was consequently rejected, and the Lords did not insist upon its insertion, the Royal Assent being given before the House rose.

IRELAND.—Mr. Birrell on Nov. 23 introduced a Bill to amend the law relating to the occupation and ownership of land in Ireland, and said the Government intended to relieve the Irish ratepayers from prospective losses. Mr. Redmond recognised the Bill as an able and far-reaching measure, but complained that it did not provide for a sufficiently rapid development of the work of land purchase. On the second reading, on Dec. 8, Mr. Wyndham moved the rejection, but it was given a second reading by 253 against 62, Mr. Birrell assuring the Nationalists that the Government did not intend to forsake or neglect it, and that it would be proceeded with in the next Session with all the rapidity possible. Mr. Asquith added that the Government would do its best to carry the Bill into law in the succeeding Session. The Housing

of the Working Classes (Ireland) Bill, to facilitate the provision of suitable housing accommodation in cities and towns for the working classes, was passed.

SCOTLAND.—The Education (Scotland) Bill and the Agricultural Holdings (Scotland) Bill were passed.

UNEMPLOYMENT.—No legislation on the subject of unemployment was dealt with, but the question was discussed on several occasions. On Oct. 21 Mr. Asquith said the Government intended to introduce legislation in the following Session. Besides providing work through the Post Office, the War Office, and the Admiralty, they were prepared to double the amount of the grant to the Central Unemployed Fund, bringing the total up to about £300,000. A few days later there was a debate upon the Government's proposals, and a resolution welcoming the Prime Minister's statement and asking the House to approve the proposed steps was carried by 196 to 35, after an amendment moved by Mr. Keir Hardie declaring the proposals to be inadequate had been defeated by 236 against 68.

SESSION 1909.

KING'S SPEECH.—The King in person opened the fourth Session on Feb. 16. The Royal Speech, in a reference to the expenditure for the year, declared that owing to various causes, including old age pensions and an increase which had become necessary in the cost of the Navy, the provision necessary for the services of the State would require very serious consideration, and in consequence less time than usual would be available for the consideration of other legislative measures. Besides the Bill giving effect to the policy announced in His Majesty's message to the princes and people of India in the preceding November, Bills dealing with Irish land, and housing and town planning, to the discussion of which time and labour had been given in the previous Session, would be introduced. The Speech further announced the presentation of Bills for the disestablishment and disendowment of the Church in Wales; for the better organisation of the labour market through a system of co-ordinated labour exchanges; for the constitution of trade boards in industries in which the evils known as "sweating" prevail; to alter the law affecting Parliamentary elections and registration in London; to amend the Old Age Pensions Act; and to amend the law in regard to imbricates, to the supply of milk, and to the hours of work in shops. The recommendations of the Commission appointed to inquire into the working of the Poor Law and into the provision for meeting distress arising from want of employment were also, the Speech added, engaging the careful attention of the Government. In the Lords, the address was moved by Lord Liverpool and seconded by Lord Hemphill, and was agreed to after three days' debate. In the Commons, Mr. F. Rogers (Devizes) moved and Mr. Wedgwood Benn (St. George's, Tower Hamlets) seconded the address. An amendment moved on behalf of the Labour Group by Mr. G. N. Barnes, representing that the Government's proposals for dealing with unemployment were quite inadequate, was defeated by 205 against 101. Mr. Austen Chamberlain moved an amendment regretting the omission from the King's Speech of proposals for enlarging the market for British and Irish produce and increasing the demand

for labour by a reform of our fiscal system, and this was rejected by 276 against 107. An amendment calling for a Bill to regulate the relations between the two Houses, moved by Mr. Ponsonby (L.), was defeated by 225 to 47, after an amendment urging an immediate appeal to the electorate on the question had been beaten by 282 to 71. Lord Percy's amendment dealing with the condition of Ireland was rejected by 336 against 128; and others on the reforms in India, local taxation, and the administration of the Aliens Act having met with a similar fate, the address was agreed to on Feb. 24.

THE BUDGET.—In a speech of over four hours' duration, Mr. Lloyd George on April 29 unfolded his Budget, which overshadowed all other business throughout the Session. The anticipated deficit, he explained, was £15,762,000; and increased expenditure must be ascribed generally to the growth of naval expenditure and to old age pensions. Fresh liabilities must be incurred next year in connection with the Navy and social reform. Describing how he proposed to provide the sixteen and a half millions of new taxation, the Chancellor said the repayment of debt would be reduced by three millions. He announced a graduated tax on pleasure motor cars and a duty on petrol. The rate of income tax on all unearned income and on earned income over £3,000 was to be raised to 1s. 6d., and there would be a super-tax of 6d. in the pound on incomes over £5,000 on the amount exceeding £3,000; there being an increased abatement on incomes under £500 for every child under sixteen years of age. The death duties were to be increased and stamp duties raised. Fifty per cent. was to be levied on the annual value of all licences, and three-pence in the pound imposed on the receipts by clubs from the sale of liquor. These increases in licensing duties would, he estimated, produce extra revenue of £2,500,000. A tax of twenty per cent. was put on the unearned increment in land values, and a tax of one halfpenny in the pound on undeveloped land and minerals. An increased duty on spirits of 3s. 6d. per gallon was expected to yield £1,500,000, and an extra 8d. per pound duty on tobacco £1,900,000. The result, according to the Chancellor's figures, was a surplus of £448,000. Included in his statement was the announcement of an immediate grant of £200,000 to a scheme of national afforestation and the development of agriculture, a grant of £100,000 for labour exchanges, and the foreshadowing of a scheme of workmen's insurance and of an extension of old age pensions. At the conclusion of Mr. Lloyd George's speech, Mr. Redmond intimated that the proposals would be opposed by the Nationalists; but Mr. Barnes, for the Labour Party, uttered a welcome. The resolutions passed through the Committee and report stages, sternly opposed by the Unionists. In one of the debates Mr. Churchill said this year saw the vindication of Free Trade as a revenue-producing instrument, and next year would see its triumph. He thought this demonstration of Great Britain's strength would not be without its effect upon the diplomatic and perhaps the naval situation in Europe. On May 26 the Finance Bill was read a first time. To the second reading four days were allotted. Mr. Austen Chamberlain moved the rejection, declaring that the Government were forging a weapon for oppressive taxation; but his motion

was defeated by 366 against 209—a majority of 157—and the Bill was read a second time. The Committee stage was commenced on June 22, and a long and resolute fight was carried on throughout the summer months. After it had proceeded for some weeks, new powers were given to the Chairman to rule out amendments, and by this means and by help of many all-night sittings better progress was made, the first two clauses alone having occupied ten days. The Government majority varied considerably, but there were few secessions. Various changes, mostly of small importance, were made; the Chancellor of the Exchequer announcing that the State would pay for the valuation of land, and the Prime Minister intimating that a tax on mineral royalties would be substituted for that on ungotten minerals. The tax on the receipts of clubs from the sale of liquors was altered to one on purchases, and other changes were made regarding the land proposals and the death duties, thus reducing the amount which Mr. Lloyd George had originally anticipated would be produced by his scheme. The Committee stage was finally completed after occupying over forty days, many of which were prolonged far into the following morning.

SOUTH AFRICAN UNION.—Without any amendment, the Union of South Africa Bill passed through each House, being welcomed by all parties. Both in the Lords and the Commons an effort was made to remove the disqualification of men not of European descent for membership of the Legislature, but it was explained that if this clause were struck out the Union would be "smashed," the delegates not being empowered to deal with such amendments. In the Commons debate Mr. Balfour described the measure as a wonderful issue out of all the controversies, battles, bloodshed, devastation, and horrors of war, and said he did not believe that the world had shown anything like it in its whole history. The Royal Assent was given on Sept. 20.

INDIAN REFORMS.—Lord Morley on Feb. 23 introduced in the Lords the Indian Councils Bill, which he said provided for the enlargement of the Legislative Council of the Governor-General and of the existing provincial Legislative Councils, the election of a certain proportion of their members by popular vote, and greater freedom to discuss matters of general public interest. The measure was generally welcomed and read a second time. On the Committee stage, on March 4, Lord MacDonnell proposed to omit the clause giving power to constitute provincial executive councils, with the view of the insertion of a new clause. The Secretary of State defended his clause, which was defeated by 59 against 18; and when Lord Morley sought to reinsert the clause on the report stage, permission was refused. The third reading was given on March 11, and on April 1 the Bill was read a second time in the Commons without a division. On April 19 the Bill passed through Committee, the clause struck out by the Lords being reinserted by 128 against 22; and at the third reading the Unionist intimated that they would be prepared in the Lords to introduce words giving Parliament effective control over the proposals for the extension of the system of executive councils. When the Lords, on May 4, considered the Commons' amendments, this compromise was accepted, and the Bill received the Royal Assent on May 25. In the Commons, on August 5, the Master of Elibank, the Under

Secretary, introduced the Indian Budget, reminding the House that in 1908-9 India was still under the influence of scarcity and depression, and announcing that the year closed with a deficit of £3,750,000. An improvement in general trade conditions had set in, and as to famine there was then no general depression. He remarked that the assassinations of Sir Curzon Wyllie and Dr. Lalooa ought to be regarded as the isolated act of a fanatic, and not as evidence of any widespread conspiracy against the British nation; and he announced that Lord Morley had appointed a committee to consider what could be done to befriend Indian students who came to England.

NAVY.—The Service Debates of the Session were almost entirely devoted to the Navy, and some highly important pronouncements were made. The first took place on the Navy Estimates on *March 16*, when Mr. McKenna declared that so great was Germany's constructive power that it would tax the resources of Great Britain's ship-building firms to keep level with her. In *1907*, our total strength in Dreadnoughts and Invincibles would, he said, be twelve of the former and four of the latter. We should have sixteen of these modern ships as against but thirteen for which Germany was already making provision. But the German law provided for the laying down of four additional ships in *1910-11*, and if the construction were accelerated they would be completed by April, *1912*, when Germany would have seventeen Dreadnoughts and Invincibles. In any case they would be completed by the autumn of *1912*. Therefore, if we were to maintain our superiority of this type, we must be sure of having four more of these large vessels by March, *1912*. We must be prepared to have then twenty such ships as against Germany's seventeen. Mr. Balfour said for the first time for many generations the country was in danger of finding itself in a position which it would never have tolerated in the past. The question was no longer whether in ships of the Dreadnought type we should be maintaining the two-Power standard, but whether we should be maintaining the one-Power standard. Mr. Asquith declared that there was no hope of a mutual reduction of expenditure. The critical time would be March, *1912*, but by then, if the Germans accelerated their programme, we should have twenty Dreadnoughts while they might have seventeen. Again, if by further acceleration the Germans were to arrange to have twenty-one we should have plenty of time between now and next year to provide for an advance beyond twenty. Definite declarations had, the Prime Minister announced, come from the German Government that it was not their intention to accelerate their programme. But the progress made by Germany in the last twelve months had falsified the assumptions made last year, and had greatly surprised the Government. On *March 24* Mr. Asquith said they had gratefully accepted an offer by the New Zealand Government of a first-class battleship, and of a second if events showed it to be necessary; and on *June 10* he announced the receipt of a similar offer to the Empire by the Australian Commonwealth. Replying to a vote of censure moved by Mr. Arthur Lee on behalf of the Opposition on *March 29*, Sir Edward Grey said the German naval programme imposed upon Great Britain the necessity of rebuilding the whole of its fleet. The Admiralty had been taking stock of plant.

Our capacity for building hulls and machinery was in excess of Germany's, and for the construction of guns of the best size our capacity was also superior. The weak point was our capacity for constructing gun mountings, and the Admiralty were taking steps to obtain the advantage in this also. Regarding diplomatic relations he saw for the future a wide space in which both Governments could walk in perfect amity and peace. Our naval expenditure must be dependent on Germany's, though hers was not dependent upon ours. The Foreign Secretary denied emphatically that the Admiralty was open to the charge of having underestimated the situation, and declared that if information in regard to Germany's action in the future could not be obtained, the Government would give the benefit of the doubt to the side of national safety. The vote of censure was defeated by 353 against 138—a majority of 215. On *April 22* the Prime Minister informed the House of the appointment of a sub-committee of the Committee of Imperial Defence to inquire into a statement submitted by Lord Charles Beresford regarding the readiness for war of the fleets in home waters. A resolution which condemned any modification of the two-Power standard was on *May 26* rejected by 270 against 114, and an amendment declaring that the House accepted with confidence the Prime Minister's statement on the matter was carried by a majority of 166. On *July 26*, during the discussion on the ship-building vote, Mr. McKenna said that, after a very anxious and careful examination of the conditions of ship-building in foreign countries, the Government had come to the conclusion that it was desirable to take all the necessary steps to ensure that the second four ships referred to in the programme should be completed by March, *1912*. These ships were four contingent Dreadnoughts which were provided for in the Estimates, in addition to four definitely announced. Mr. McKenna added that they would be laid down in April, *1910*. A reduction of the vote was moved by Mr. John Ellis on behalf of those who favoured the restriction of armaments, but this was beaten by 280 against 98.

ARMY.—Mr. Haldane, in the Commons, on *March 4* said the Territorial Forces then contained over 240,000 men, and recruiting had been good. Recent events had fortified his expectation that the nation was perfectly able to take care of itself on a voluntary army basis. The Territorial Reserve was being organised to bring up the force in case of need to 400,000 men. The Army Annual Bill went through both Houses with but slight discussion. Lord Roberts on *July 12* moved the second reading of the National Service (Training and Home Defence) Bill, which had been presented earlier by Lord Newton. The measure sought to impose on all male subjects between the ages of 18 and 30 the obligation of serving in the Territorial Forces. The Duke of Northumberland met the motion by an amendment that the House, recognising the need of providing for home defence, was not prepared to proceed with the Bill, which, while involving unknown demands upon the national resources, would supersede the system accepted as sufficient by the military advisers of the Government. The Bill was, on the following day, defeated by 123 against 103. Later in the month, Lord Lucas, Under-Secretary for War, announced that it was proposed to form a reserve of the Territorial Forces in three separate

categories—Territorial Force Reserve, a technical reserve, and a Veterans' Reserve.

IMPERIAL DEFENCE.—On the conclusion of the Conference on the Imperial Defence of the Empire, the Prime Minister, in the Commons, on *Aug. 26* made an important announcement regarding the outcome of the deliberations. On the military side, the result was, he said, a plan of so standardising the forces of the Crown, wherever they might be, that, while preserving complete autonomy to each Dominion, those forces could rapidly be combined into one homogeneous Imperial Army. In regard to naval defence, New Zealand preferred her present policy of contribution, and Canada and Australia proposed to lay the foundation of fleets of their own. The Australian and China units of the Pacific Fleet would be provided by Australia, with some temporary assistance from Imperial funds, and in part by the New Zealand contribution. Canada would make a start with cruisers and destroyers, and would undertake the maintenance of dockyards at Halifax and Esquimaux, the maintenance of the dockyard at Sydney being eventually undertaken by the Commonwealth Government.

WELSH DISESTABLISHMENT.—The Prime Minister, in the Commons, on *April 21* introduced a Bill to terminate the establishment of the Church in Wales and Monmouthshire, and to make provision in respect of the temporalities thereto. By this, all ecclesiastical corporations in the four Welsh dioceses were to be dissolved on *Jan. 1, 1911*, from which date no Welsh Bishop would sit in the House of Lords. Three bodies would be created for the purpose of administration. In the first place, there would be the Welsh Commissioners, whose functions would continue until the end of *1915*; secondly, there would be a Council for Wales, or central authority, consisting of members appointed by the councils of counties and county boroughs and of borough and urban districts of the required minimum population; and, thirdly, there was to be a Church Representative Body. Parochial property would be applied for the erection or support of hospitals, dispensaries, or homes, for the provision of trained nurses, public halls, institutes and libraries, or for technical and higher education; one-tenth being paid to the Council of Wales, which, with all other property in their hands, would be expended in defraying the cost of the measure and upon higher education. After Mr. Asquith's explanatory statement, Mr. Bridgeman moved an amendment inviting the House to decline to sanction the introduction of the Bill until after the publication of the report of the Royal Commission on the Church in Wales, which was defeated by *262* against *90*, and the Bill was introduced. However, on *June 15*, Mr. Asquith announced that the Government had come to the conclusion that it would be impossible to carry the Bill through all its stages during that Session. They had, therefore, decided to make the Bill the first Government measure next Session.

HOUSING AND TOWN PLANNING.—Mr. Burns moved the second reading of the Housing and Town Planning Bill on *April 5*, explaining that the measure was almost an exact reproduction of the Bill considered in the previous year. The existing law enabling local authorities to provide new houses for the working classes would, by the Bill, be not adoptive, but obligatory, and the law respecting closing orders and the demolition of

insanitary houses unfit for human habitation was simplified and strengthened. The Opposition received the Bill sympathetically, though an amendment declining to make the cost a charge upon the local rates had to be rejected before the second reading was agreed to. The measure passed through the Commons with little discussion, and the Lords gave it a second reading, but during its three days' consideration in Committee (*Sept. 21, 22, and 23*) the Peers made a number of important amendments, despite the strong appeal of the Government. The proposed procedure was radically modified, and Lord Crewe declared there was a wide and unbridgeable difference between the Government and the Opposition.

LONDON ELECTIONS BILL.—Mr. Lewis Harcourt on *April 19* introduced the measure announced in the King's Speech which sought to constitute London a single Parliamentary borough. He said there would be a successive occupation qualification for all voters moving from one London division to another, and all divisions would poll on the same day, no man voting for more than one of his qualifications within the borough of London. The second reading was carried on *June 4*, after an amendment, moved by Sir H. Kimber, declaring that the House would not entertain a Bill restricting the exercise of the franchise which was not accompanied by provisions for a redistribution of seats, had been rejected by *140* to *46*. The Bill was referred to a Standing Committee, which ordered it to be reported to the House without amendment.

LABOUR EXCHANGES.—On *May 20* Mr. Churchill introduced the Government's Bill dealing with Labour Exchanges, and said the whole country would be divided into ten divisions, each with a clearing-house, co-ordinated with a clearing-house in London. There were to be between thirty and forty exchanges in the large towns, forty-five in smaller towns, and *150* minor offices. A joint advisory committee would be established in every great centre, on which representatives of the employers and the employed would meet in equal numbers, under the chairmanship of an independent permanent official. He hoped to bring the system into practical operation early in *1910*. The cost in ordinary years would be not less than *£170,000* a year, but it would be more at first. As to the Insurance scheme, it would be one of contributory and compulsory insurance, involving contributions from the working people and the employers, with a substantial subvention from the State. In the first instance it would apply to particular trades, comprising *250,000* workers. The measure was generally welcomed, and passed through both Houses, as did the Trade Boards Bill dealing with "sweating," after it had been amended by the Standing Committee.

IRELAND.—On *March 30* Mr. Birrell moved the second reading of the Irish Land Bill, and this was agreed to after the defeat of an amendment for its rejection by *275* to *102*. The measure was practically the same as that introduced in *1908*. The Chief Secretary said Ireland was in the very middle of a great agrarian revolution, and there was every reason for supposing that *183* million pounds would be required to carry the revolution through. A resolution limiting the time to be spent on the remaining stages was carried on *June 15*, and it passed through Committee on *Aug. 27* after eight days' discussion, the Government's majority on one occasion

falling to 32. On Sept. 17 the Bill was given a third reading, after a motion for its rejection had been defeated by 174 against 51. When the Bill arrived in the Lords, Lord Dunraven brought forward a motion for its rejection, but Lord Lansdowne indicated his intention to amend it in Committee, and Lord Dunraven's amendment was withdrawn, the second reading being carried.

SCOTLAND.—The principal Scottish measure introduced was the Trawling in Prohibited Areas (Prevention) Bill, which went through both Houses, and received the Royal Assent on Sept. 20. It provided for the prevention of the sale in England of fish trawled in the prohibited areas off the coast of Scotland and an amendment extending the prohibition to Ireland was carried. The House Letting and Rating Bill, designed to remove the grievances in regard to the agreement of letting houses, also passed through both Chambers.

Lord Chancellor	Sir Samuel Walker, Bart.	8,000
Attorney-General	Richard Robert Cherry, K.C.	5,000
Solicitor-General	Redmond Barry	2,000

ADMIRALTY, Whitehall, S.W.

The management of all maritime affairs, the government of the Royal Navy, jurisdiction in maritime cases, and the appointment and commissioning of Naval Officers, was in early times the province of the "Lord High Admiral," the ninth Great Officer of State. The judicial functions of the office have long been vested in other hands, and the office itself has been "in commission" since 1708 (except for a short time in 1827, when the Duke of Clarence was Lord High Admiral), the duties being performed by Commissioners for executing the Office of Lord High Admiral for the United Kingdom. These Commissioners, or "Lords of the Admiralty" as they are more generally called, consist of a Political "First Lord" (who, by virtue of the importance of his office, is a Cabinet Minister), a "First Sea Lord," "Second Sea Lord," "Third Sea Lord and Controller," and a "Fourth Sea Lord," now always selected from Officers of the Service, with a Political "Civil Lord." There is also a "Parliamentary and Financial Secretary" and a non-political Permanent Secretary. The net amount provided in the Navy Estimates 1909-10, for administration, is £37,200.

LODS COMMISSIONERS

First Lord, The Rt. Hon. Reginald McKenna, M.P.	£4,500
Private Secs., Capt. C. E. Madden, C.V.O., R.N., £1,000; + V. W. Baddeley, £150; R. Skinner £150

(also see NAVAL DEPARTMENT, pp. 209-211.)

AGRICULTURE AND FISHERIES, Board of, 4 Whitehall Place; 3 St. James's Square, and 3 Delahay Street, S.W.

The Board of Agriculture was established by the Act of 1889, when there were transferred to it the duties of the Privy Council in connection with Diseases of Animals, and the functions of the Land Commissioners for England. Technically, the membership of the Board is analogous to that of the Local Government "Board," and "Board" of Education, but in effect the establishment consists of a President, Secretary, Assistant Secretaries, &c., and its main functions are to prevent the introduction or spread of certain diseases among animals, to deal with insect and fungus pests, to collect and distribute information relating to agriculture, horticulture, and forestry in Great Britain, to administer the Grant voted by Parliament to the Board for Agricultural Education in England and Wales, to collect and publish agricultural statistics, to administer the Fertilisers and Feeding Stuffs Act and the Sale of Food and Drugs Acts in Great Britain so far as the latter relate to agricultural produce, to control the redemption of tithe rent charge and the enclosure of common land, to enforce the copyhold land to administer the Small Holdings and Allotments Acts and the Acts relating to the improvement of land by private owners, and to administer the Acts relating to Sea, Salmon and Freshwater Fisheries as regards England and Wales. The Board also publish a monthly "Journal," price 4d. By the Board of Agriculture and Fisheries Act of 1903 certain powers and duties formerly exercised by the Board of Trade with respect to fisheries were transferred to this Department, the designation of which was at the same time altered. The Board also control the Ordnance Survey of the U.K. which is the subject of a separate Vote. By an Order in Council of 28 March, 1903, the supervision of the Royal Botanic Gardens, Kew was

transferred to the Board. The cost of administration in the financial year 1909-10 was estimated at £173,109.

President, Rt. Hon. the Earl Carrington, K.G. £2,000
Private Secs., E. B. Shine, £300; R. Winfrey, M.P. £175; and C. W. B. Prescott £100
Secretary, Sir Thomas Henry Elliott, K.C.B. £1,500

ARMS, COLLEGE OF, or HERALDS' COLLEGE, Queen Victoria Street, E.C.

The Heralds' College was incorporated and endowed
 by Richard III. in 1484, as a College of Arms, presided
 over by the Earl Marshal, the other members being the
 then Kings of Arms, and the six Heralds, to regulate
 the bearing of Coat Armour, in addition to the ordinary
 functions of the Heralds. Their first residence was in
 Fultener's Inn until the present site was granted by
 Queen Mary in 1554, the house being rebuilt as it now
 stands after destruction in the Great Fire.
 Earl Marshal, His Grace the Duke of Norfolk, K.G.,
 G.C.V.O.

KINGS OF ARMS.

Barter, Sir Alfred Scott Scott-Gatty, Knt., C.V.O., F.S.A.
 Clarendon, George Edward Cockayne, M.A., F.S.A.
 Norroy, William Henry Weldon, C.V.O., F.S.A.

SIX HERALDS.

Chester, Henry Murray Lane.
 Lancaster, Edward Bellasis.
 Somerset, Henry Farnham Burke, C.V.O., F.S.A.
 Richmond, Charles Harold Athill, F.S.A.
 Windsor, Wm. Alec Lindsay, K.C., M.A., F.S.A.
 York, Gordon Ambrose de Lisle Lee.

FOUR PURSUIVANTS

Rouge Dragon, Everard Greuc, F.S.A.
 Portcullis, Thomas Morgan Joseph-Watkin.
 Rouge Croix, Arthur William Steuart Cochrane.
 Bluenante, Gerald Woods Wollaston, M.V.O.
 Earl Marshal's Sec., William H. Weldon, C.V.O., F.S.A.
 Registrar, H. Farnham Burke, C.V.O., F.S.A.

CHARITY COMMISSIONERS,

Ryder Street, St. James's, S.W.

The Charity Commission was appointed by Act of
 Parliament in 1853 "for the better administration of
 Charitable Trusts in England and Wales." In 1874 the
 powers previously exercised by the Endowed Schools
 Commissioners were temporarily transferred to the
 Charity Commission, and in 1879 the transfer was made
 permanent. The powers of the Commissioners over all
 endowments held for purely Educational purposes have
 now been transferred to the Board of Education in
 pursuance of Orders in Council made under the Board
 of Education Act, 1899.

Chief Commissioner, Charles Archer Cook £1,500
Private Sec., E. Macpherson £300
Commissioners, Arthur Francis Leach, £1,200; and
 E. J. Soares, M.P. unpf.
Secretary, Henry W. T. Bowyear £1,000
Assistant Commissioners and Principal Clerks, F. T. C.
 Henry; H. P. Morris; J. F. Mills; G. C. Bower; C. G.
 Drinan; H. Hodgkin; G. W. Wallace £675 to £950
Assist. Commrs. (temp. employ.), A. C. Kay; G. G.
 Phillimore £500 to £700
Accountant, Off. Trustees' Dept., E. Gilbert
 £550 to £700

Assist. do., C. T. Rudcliffe £300 to £450
1st Class Clerks, G. B. Bone; A. K. Kennedy-Furvis;
 C. F. Ritchie, E. Macpherson £450 to £600
2nd Class Clerks, W. Enderby; G. B. Rooke; H. D. S.
 Leake; A. E. McLaren; R. E. Ford; C. Hope-
 Wallace; P. B. Jackson £265 to £400
Lth. and Clk. to Sec., J. J. B. Petherbridge.
Clerk in charge of Accounts of Charities, F. F. Davy.
ad Div. Clerks (Higher Grade), J. Ford; A. L. Guest;
 J. W. Joyce; C. Cooper; A. Boulwood; C. N. Francis;
 F. H. Lewis; A. S. Haubury; G. Thomas; H. P.
 Brown; A. E. Large; H. B. Denham; S. Hart
 £277 to £350

CIVIL SERVICE COMMISSION,

Burlington Gardens, W.

The Civil Service Commission was established in 1855
 to apply tests of fitness for junior situations in all
 branches of the Civil Service. In 1870 an Order in
 Council applied the system of competitive examination
 throughout the Service.

1st Commissioner, Lord Francis Hervey £1,500
Commissioner, Stanley M. Leathes £1,200
Sec. and Registrar, J. L. Le B. Hammond £800 to £900
Assist. Sec., S. Cassan Paul £750
Senior Clerks, W. D. Dade and H. Fincham, i.s.o.
 £500 to £600
Senior Examiner, D. B. Malr £700 to £900
Staff Officer, J. C. Henwood, i.s.o. £350 to £450

COLONIAL OFFICE, Downing Street, S.W.

The business of the Colonies was, until 1801, included
 in the functions of the Home Secretary, to be trans-
 ferred in that year to the newly-created "Secretary for
 War." In 1854 the outbreak of the Russian War led to
 the appointment of a Secretary of State for the Colonies
 (to relieve the War Secretary of Colonial business). The
 Colonial Secretary possesses an advisory power of veto
 on legislation of the self-governing Colonies, and is
 responsible for the government of the remaining
 Dominions beyond the Seas in inverse proportion to the
 amount of self-government granted to them. The
 salaries, &c., of the Colonial Office are estimated at
 £53,500 for 1909-1910.

Principal Secretary of State for the Colonies, Rt. Hon.
 the Earl of Crewe, K.G. £5,000
Priv. Sec., Lionel Earle, C.M.G. £300
Assist. do., H. C. W. Verney, £550; A. J. Harding,
 £200; G. Cunningham unpf.

UNDER-SECRETARIES.

Permanent, Sir Francis J. S. Hopwood, G.C.M.G., K.C.B.
 £2,000
Private Secretary, W. C. Bottomley £1,500
Parliamentary, Lt.-Col. J. E. B. Seely, i.s.o., M.P.

Private Secretary, R. V. Vernon £1,500
Asst. Secs., G. C. N. Nicholson and Geoffrey Barling,
 M.P. unpf.
Assist. Und.-Sec., Sir C. Prestwood Lucas, K.C.M.G., C.B.

Do. do. (Legal) Hugh Bortram Cox, C.B. £1,500
Do. do. Hartmann Wolfgang Just, C.B., C.M.G.
 £1,200
Do. do. George V. Fiddes, C.B., C.M.G. £1,200
Chancellor of the Order of St. Michael & St. George,
 The Duke of Argyll, K.C., K.T., G.C.M.G., G.C.V.O.
Chief Clerk, Chas. Alec. Harris, C.B., C.M.G. £1,150
Principal Clerks, Geo. Wm. Johnson, C.M.G.; H. J.
 Read, C.M.G.; Charles Strachey; H. C. M. Lambert;
 A. E. Collins; W. D. Ellis; G. E. A. Grindle
 £850 to £1,000

Legal Assistant, John Shuckburgh Risley £750
1st Class Clerks, J. F. N. Green; T. C. Macnaghten;
 E. H. Marsh, C.M.G.; C. T. Davis; F. G. A. Butler;
 W. A. Robinson; A. Fiddian; H. E. Dale; E. R.
 Darnley; R. E. Stubbs (acting) £600 to £800
2nd Class Clerks, R. Geikie; R. V. Vernon; W. C.
 Bottomley; A. J. Harding; H. R. Cowell; R. H.
 Griffin; E. J. Harding; A. B. Keith; H. F. Batter-
 bee; J. R. W. Robinson; J. Anderson; D. L. H.
 Baynes; A. Gray; A. C. C. Parkinson; R. C. Wood-
 head £200 to £500
Accountant, A. H. H. Engelbach, i.s.o. £600 to £700
Assist. Accountant, W. H. Eggett £300 to £450
Librarian, C. Atchley, i.s.o. £500 to £600
Chief Registrar, W. H. Westbrook £300 to £450
Dep. to do., M. J. Drayson £200 to £300
Signl. of Printing, B. D. Roeketh £340 to £450
Assist. to do., A. H. Bridgman £200 to £300
Clerk for Legal Instruments, C. H. Niblett £375 to £450
and Div. Clerks (Higher Grade), W. Scott; T. Wilson;
 W. E. Hobson; J. A. Smith; E. E. Wilkinson
 £250 to £350

Medical Adviser, Sir Patrick Manson, M.D., K.C.M.G., F.R.S.

Emigrants' Information Office £1,700.

31 Broadway, S.W. (10 to 5. Sat. 10 to 1.30.)

Pres., Committee of Management, The Secretary of
 State for the Colonies.

Chairman, do., F. G. A. Butler.

Chief Clerk, Malcolm Jones.
Editor of Publications, Walter B. Paton, M.A.

Crown Agents for the Colonies,
Whitehall Gardens, S.W. (Stock Transfer Office,
Tokenhouse Buildings, E.C.).

Chief Clerk and Accountant, E. G. Antrobus.

Imperial Institute.

South Kensington, S.W.

The Imperial Institute was erected as a memorial of the Jubilee of Queen Victoria (see page 404), and by the Imperial Institute Transfer Act of 1902 is under the management of the Colonial Office, assisted by a Managing Committee on which the Colonial Office, Indian Office, and Board of Trade are represented.

Committee of Management, Sir A. E. Bateman, K.C.M.G.; C. Alexander Harris, C.B., C.M.G.; Col. Duncan G. Pitcher.

Director, Wyndham R. Dunstan, LL.D., F.R.S.
Secretary, Major E. J. Lugard, D.S.O.

SCIENTIFIC AND TECHNICAL DEPARTMENT.

Superintendent of Laboratories, T. A. Henry, D.Sc.

Technical Superintendent, H. Brown.

Principal Assistant, E. Goulding, D.Sc.

Special Assistants, H. E. Robinson, M.A.; J. W. Evans,

D.Sc.; B. E. Long, B.A.

Senior Assistants, T. Crook, A.R.C.S.I.; A. E. Andrews; S. J. Johnstone; R. G. Polly, A.R.C.; S. J. M. Auld, Ph.D., D.Sc.; F. W. Barwick; S. S. Pickles, D.Sc.

EXHIBITION GALLERIES.

Technical Superintendents of Indian and Colonial Collections, W. G. Freeman, B.Sc.; S. E. Chandler, D.Sc.; H. Spooner; A. B. Jackson.

CORNWALL, DUCHY OF, Buckingham Gate, S. W.

Cornwall was created a Duchy by Edward III. for the support of his eldest son (afterwards created Prince of Wales), and the eldest son of the Sovereign has since been born Duke of Cornwall, the revenues of the Duchy accruing to the Duke. The internal government of the Duchy was amended by the Acts of 1863 and 1893, and certain peculiar juridical powers abolished. The accounts of the Duchy will be found on page 465.

Lord Warden of the Stannaries, The Lord Balfour of Burleigh, K.T.

Keeper of Privy Seal, The Earl of Mount Edgcumbe, C.V.O.

Attorney-General, Sir Charles Alfred Cripps, K.C.V.O., K.C.

Receiver-General, The Lord Revelstoke.

Auditor, Sir Lesley Charles Probyn, C.V.O.
Sec. and Keeper of Records, Walter Peacock.

CUSTOMS AND EXCISE, BOARD OF, E.C.

Commissioners of Customs were first appointed in 1671 and housed by the King in London, the present "Long Room" replacing that built by Charles II. and rebuilt after destruction by fire in 1725 and 1846. In 1890 the Customs business of Ireland was transferred to London. The Excise Department was formerly under the Inland Revenue Department, and was amalgamated with the Customs Department on 1 April, 1900.

Chairman, Laurence N. Guillemard, C.B. £2,000
Private Sec. Harry W. Trotter.

Dep. Chairman, F. Sydney Parry, C.B. £1,500
Commissioners, Richard F. Crawford; Robert Henderson, C.B., each £1,200; James B. Meers, C.B. £1,400

Private Sec. to Deputy Chairman and Commissioners, L. W. Jennings.

SECRETARIES' OFFICE.

Secretaries, William G. Lewis, I.S.O.; James P. Byrne, I.S.O. £1,200

Knight, M. Devereux; J. P. Tonkin; G. W. Jackson; W. McCann; J. K. Duffly; F. K. Booth; J. E. Kennedy; E. H. Flecker; W. Nugent; E. H. Goodman. £350 to £420

Laboratory.

See Government Laboratories.

DURHAM COUNTY PALATINE OF.

It is uncertain when "Palatine" privileges were first exercised in the County of Durham, as no formal creation of the Palatinate by charter or deed appears to have ever been made. From the founding of the See of Lindisfarne, out of which the bishopric and palatinate of Durham arose, the Bishops received large grants of lands, with extensive immunities; and Guthred, king of Northumbria, and Alfred the Great appear to have conferred the grant to the See of the whole of the land between the rivers Tyne and Wear. There is no evidence of the exercise of palatine privileges by the Bishops prior to the Norman Conquest, but it is probable that these were acquired in the reign of the Conqueror, and they were exercised by the Prelates until arrogated by the Crown in 1236. Palatine counties are understood to have been erected for the defence of neighbouring kingdoms against the Welsh and Scots, and were in reality self-contained kingdoms in alliance with their creator. The ancient customs of the County Palatine of Durham are in some measure retained, the administrative authority being exercised on behalf of the Crown.

Temporal Chancellor, John Scott Fox, k.c.

Attorney-General, Edward Tindal Atkinson, k.c.

Solicitor-General, Herbert F. Manisty, k.c.

Registrar of Chancery Court, A. O. Smith.

Steward and Clerk of Halmotes, F. A. Manley.

Deputy do. and Clerk, G. Young, Esq.

Mining Surveyor, Sir Lindsay Wood, Bt.

Executors, Smiths, Gore, Norton & Co.

ECCLIASTICAL AND CHURCH ESTATES COMMISSIONERS, Millbank, Westminster, S.W.

(Hours 10 to 5.)

The Ecclesiastical Commission for the Management of Church Property, as now existing, was incorporated in 1836, its constitution being amended in 1861 and 1893. The main function of the Commission (whose members are given below) is the management of the Estates of the Church in order to endow or augment benefices, &c.

Ecclesiastical Commissioners. EXCHEQUER AND AUDIT DEPARTMENT.

Victoria Embankment, E.C.

The Comptroller and Auditor-General was appointed by Letters Patent under the Great Seal, 29th March 1866, in place of the Comptroller-General of the Exchequer and the Commissioners for Auditing the Public Accounts, whose duties were handed over to him. The main functions of the office are: (1) In regard to the Exchequer.—The examination of the daily accounts of revenue and other public moneys paid into the Banks of England and Ireland to the account of His Majesty's Exchequer; the examination of the quarterly accounts of the Income and Charge of the Consolidated Fund, in order that the Banks may be authorized to make advances in the case of any deficiency; and also the grant of credits for issues from the Exchequer, not exceeding the amounts sanctioned by Parliament. (2) In regard to the Audit of the Public Accounts of the United Kingdom.—To ascertain that money expended has been applied to the purpose for which the grant of Parliament was intended; to provide that the expenditure is supported by proof of payment, and generally to verify the correctness of the Accounts and to report to Parliament thereon.

The Accounts of certain Crown Colonies and Protectorates are audited by the Comptroller and Auditor-General on behalf of the Secretary of State for the Colonies. The cost of this audit is borne by the Colonies and Protectorates affected.

The net expenses of the Department were estimated at £54,400 in 1900-10.

<i>Comptroller and Auditor-General, Sir John Arrow Kempe, K.C.B.</i>	£2,000
<i>Private Secretary, W. T. Restall</i>	£100

<i>Senior Clerks, E. W. Reay; Arthur R. Barrett; A. H. Britton; J. W. Cox; W. H. Gallier; S. Waine; A. E. Stephenson; John Tenney; W. Portesque Barratt; B. Horner; J. A. Barnes; T. J. Bradley; A. T. V. Robinson; F. N. Dixon; H. N. Bunbury; F. Wood; F. N. Warman; F. C. Goldby; H. Collett</i>	£500 to £700

Chief Examiners, J. R. Sowden; E. Merrick; W. W. Hunter; J. S. Lee; C. Monk; J. D. Rees; W. E. Jeffery; J. J. Garnham; W. T. Restall; J. Houldsworth; W. Anderson; M. Cleary; T. B. Pearson; P. A. N. Nicholls; W. A. Woods; T. C. Evans; H. N. Horton; B. H. Cox; J. L. Rawcliffe; W. D. Buthurst; C. H. Stoodley; G. Burley; H. J. Price; W. B. McKown; G. F. Davis; R. J. Watson; P. W. Reynolds; H. J. Batho; W. S. Hunt; W. C. Cartwright; F. B. Montague; C. H. Cope; A. W. Hargreaves £350 to £500 |

There are also 122 *Examiners* (of these 120 are on the Home Establishment and 2 are serving as Local Auditors or Assistant Auditors in the Colonies, in addition to 8 Local Auditors or Assistant Auditors who are not on the general Establishment of the Department) £700 to £350 |

FOREIGN OFFICE, Downing Street, S.W.

(Office hours 11 to 6.)

The Secretaryship of State for Foreign Affairs was created in 1782, superseding the ancient Secretary for the Northern Department of Europe (as the Office had been called since 1688). He is assisted by two Under-Secretaries (one Parliamentary, the other Permanent), three Assistant Under-Secretaries, a Librarian, a Head of the Treaty Department, and a staff of Clerks. The chief functions, in addition to the formal duties, are receiving and answering communications from individuals or other Government Departments, from Diplomatic and Consular Agents of this country or others, and in deter-

mining the policy of the country towards Foreign Powers. The administrative expenses of the Foreign Office were estimated at £65,871 in 1909-10.

FRIENDLY SOCIETIES' REGISTRY,

Central Office, 28 Abingdon Street, S.W.

A Barriester was appointed in 1828 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the central office of the Registry of Friendly Societies was created, consisting of Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Act, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Workmen's Compensation Acts, the Scientific Societies Act, the Savings Banks and Post Office Savings Banks Acts, the Loan Societies Act, the Shop Clubs Act, and a great number of local and personal Acts. The administrative expenses of the Registry were estimated at £9,397 in 1909-1910.

Chief Registrar, J. D. Stuart Sim £1,500

Asst. Registrar, T. Hall Hall £800

Deo., G. S. Barlow £700

and Divn. Clerks (Higher Grade), G. T. Knecht; E. Bennett; T. Jordan £250 to £350

GENERAL REGISTER OFFICE,

Somerset House, W.C.

The Registration of Births, Marriages, and Deaths is believed to have been inaugurated by Thomas Gresham in 1522, but the Statutes concerning such registration are of a comparatively modern date, and were consolidated by 27 & 28 Vict. c. 83. The first Registrar-General was appointed in 1838, his work being enormously increased by the above Act of 1874, which made registration compulsory in England and Wales. The expenses of the Office were estimated at £54,385 in 1909-1910.

Registrar-General, Bernard Mallet £1,200

Chief Clerk, A. C. Waters, I.S.O. £950

HOME OFFICE, Whitehall, S.W.

The Secretaryship of State for Home Affairs was created in 1722, the duties having previously been assigned to the "Southern" Secretaryship, which embraced the affairs of the United Kingdom, Ireland, and the Colonies, and also Southern Europe. By the appointment of the "Home" and "Foreign" Secretaries the duties were divided in accordance with the names of the Offices, the former retaining Irish and Colonial business, and until 1794 War business also. In 1802 the Colonial business was also removed. The Home Secretary is the medium by which the Sovereign acquaints his people of his pleasure, and a channel of communication with the Sovereign, and his main functions are the maintenance of the King's peace, the enforcement of rules made for

* At the Customs Branch.

the internal well-being of the community, and the exercise of the prerogative of mercy. The administrative expenses of the Home Office were estimated at £24,967 in 1908-9.

INLAND REVENUE.

Somerset House, W.C.

"Inland Revenue" is derived from Death Duties, Stamps, and Taxes, and is partly collected by the Post Office. The principal share, however, is collected by the Board of Inland Revenue, established in 1849, and consisting of a Chairman, Deputy-Chairman, and two Commissioners, with Joint Secretaries, Assistant Secretaries, and a staff of officials. The estimated cost of the Department in 1909-10 was £1,243,200 (the establishment charges of the Chief Office being £303,936), and the amounts collected under the various heads above specified reached a total of £98,979,000 in the financial year 1908-9.

Chairman, Sir Robert Chambers, K.C.B. £2,000
Private Secretary, N. F. W. Fisher £100
Deputy Chairman, E. E. Scott Bower, C.B. £1,500

LANCASTER, DUCHY OF.

Office, Lancaster Place, Strand, W.C.

Lancaster was erected into a "Palatine" Duchy by Edward III. for his son John of Gaunt in 1359, but in 1599 merged into the Crown through the accession of Henry IV. Its revenues have always been kept separate, though vested in the Sovereign and his heirs. The Judicature Act has left only the Chancery Court of the Duchy, but while the Chancellor is a Political Officer of the Government, and may or may not be learned in the law, a lawyer is appointed Vice-Chancellor. The accounts of the Duchy for the year 1907-8 will be found on p. 455.

Chancellor, Rt. Hon. Herbert Samuel, M.P. £2,000

Private Sec., Louis F. Fergusson.

Vice-Chancellor, O. L. Leigh-Clare.

Attorney-Gen., Robert Alfred McCall, k.c.

Recorder-Gen., Gen. the Rt. Hon. Sir Dighton Macnaghten Probyn, G.C.B.

Auditor, Henry Sydney Seymour.

Clerk of Council & Registrar, Wm. Rose Smith.

Solicitor, Reginald C. Hart-Dyke.

Assistant Solicitor, Douglas Hounstoun.

Surveyor-Gen. and Deputy Recorder-Gen., J. Leonard Bolden.

Coroner, A. M. Forbes.

Chief Clerk, H. E. Mitchell.

Registrar, Preston Dist., Alexander Pearce.

Do. Liverpool Dist., F. Willis Taylor.

Do. Manchester Dist., Hubert Winstanley.

LAW OFFICERS,

Royal Courts of Justice, W.C.

Attorney-General, Sir William Snowdon Robson, k.c., M.P.

Solicitor-General, Sir Samuel Thomas Evans, k.c., M.P.

Chief Permanent Clerk, James Abbs.

LOCAL GOVERNMENT BOARD;

Whitehall, S.W.

The Local Government Board was created by the Local Government Board Act 1871, and consists of the Lord President of the Council, the Secretaries of State, the Lord Privy Seal, the Chancellor of the Exchequer,

and a Political President. The functions of the Board and of various Local Bodies were dealt with on p. 172 of the 1905 issue. The administrative expenses of the Board were estimated at £254,294 in 1909-10.

Resident Supt. House of Lords; J. K. Williams £300

METEOROLOGICAL OFFICE,

63 Victoria Street, S.W.

The Meteorological Office was established as a Department of the Board of Trade in 1854. Changes have been made from time to time in the management, and the control is now vested in a Director and Committee

appointed by the Lords Commissioners of the Treasury. The work of the office includes the collection and discussion of meteorological observations from all oceans, the maintenance of a number of stations for daily telegraphic reports upon which forecasts and storm warnings are based, and other work incidental thereto. The administrative expenses are met by a Government grant, which amounts to £25,000 annually. *Director and Chairman of Committee;* W. N. Shaw, M.P., S.E.R., F.R.S.

Marine Superintendent; Comm. M. W. Campbell Hepworth, C.B., R.N.R.

Supt. of Statistics; R. G. K. Lempfort, M.A.

Supt. of Instruments; R. H. Curtis.

Chief Clerk; John A. Curtis.

1st Class Clerks; W. Allingham; T. D. Bell; F. J. Brodie; J. E. Cullum (*Valencia Observatory*); C. Harding; H. Harries.

MINT, THE ROYAL, Tower Hill, E.

The Royal Mint, as now constituted, may be said to date from 1827, and the buildings from 1820, the latter being completed in that year at a cost of over £250,000. In 1820 the Coinage Act abolished the ancient post of Master of the Mint as such, and combined it with that of the Chancellor of the Exchequer. The first known Master (or Warden) of the Mint dates from Henry I., and the last Warden was Lord Maryborough (1824-23), the last Master being Professor Thomas Graham, who died in 1859. The estimated administrative expenses amount to £155,997 for 1909-1910.

Master and Worker, Chancellor of the Exchequer.
Deputy Master and Keeper of H.M. Seals; Rt. Hon. William Grey Ellison-Macartney £1,500

Chief Clerk; E. L. D. Matthews £500 to £700

Superintendent; A. Ventris £700 to £800

Ottawa, Canada.

Deputy Master; J. Bonar, M.D. £900 to £1,100

Superintendent; A. H. W. Cleave £650 to £800

MUSEUM, THE BRITISH,
Bloomsbury, W.C.

The British Museum may be said to date from 1753, when Parliament granted the sum of £20,000 to purchase the collections of books, &c., of Sir Hans Sloane, the building (Montagu House) being opened in 1759. The present buildings were erected between 1823 and 1857, and the original collection has increased to its present dimensions by gifts and purchases, and by the operation of the Copyright Act of 1842, which secures a copy of every publication for the Library. Rules, &c., affecting the public duties and times of opening, &c., will be found among "Places of Interest." The administrative expenses of the British Museum were estimated at £179,228 (including Natural History Museum) in 1909-10, and were met by a vote under "Education, Science, and Art," Class IV. of the Civil Service Estimates.

Director and Principal Librarian; Frederic George Kenyon, F.R.A., M.Litt. £1,500

Assistant Secretary; A. R. Dryhurst £600 to £700

Assistant, 1st Class; E. B. Nicholson, B.A. £300 to £500

 Assistant, 1st Class, G. F. Hill, M.A. £300 to £500
 Assistants, and Class, John Allan, M.A.; G. C. Brooke, B.A. £150 to £300
 Solicitors, Messrs. Warrens, 99 Gt. Russell Street.

MUSEUM, THE NATURAL HISTORY, Cromwell Road, S.W.

The Natural History Collections in the British Museum were removed to South Kensington in 1881, the new museum being opened in the same year. The hours of opening, &c., will be found under "Places of Interest." The administrative expenses were estimated at £60,543 in 1909-10.

Director, L. Fletcher, M.A., F.R.S. £1,200
 Assistant Secretary, Charles H. Fagan. £700
 Assistant, 1st Class, Basil H. Soulsby, B.A., F.S.A. £300 to £500
 Clerks, W. H. R. Holl; W. J. Anderson. £155 to £350
 Assistant, 1st Class (Library), B. B. Woodward. £500
 Keeper of Zoology, Dr. Sidney F. Harnor, M.A., F.R.S. £800

Assistant Keepers, Edgar A. Smith, I.S.O.; Dr. R. Bowdler Sharpe; Charles Owen Waterhouse. £500 to £650
 Assistants, 1st Class, George A. Boulenger, F.R.S.; Oldfield Thomas, F.R.S.; Fras. Jeffrey Bell, M.A.; W. R. Ogilvie Grant; Sir George Francis Hampson, Bart.; Charles J. Gahan, M.A.; Randolph Kirkpatrick; Francis A. Hoen, M.A.; Dr. W. T. Calman; Ernest E. Austen; C. T. Bevan, M.A. £300 to £500
 Assistants, and Class, G. J. Arrow; A. S. Hirst; J. G. Dollman, B.A.; W. P. Pycraft; G. Mende-Waldo, B.A. £150 to £300
 Keeper of Geology, Dr. A. S. Woodward, F.R.S. £700 to £800

Assistant do., Dr. F. A. Bather, F.R.S. £500 to £650
 Assistants, 1st Class, R. B. Newton; Dr. C. W. Andrews, F.R.S.; G. C. Crick. £500 to £650
 Assistant, and Class, W. D. Lang, B.A. £150 to £300
 Keeper of Mineralogy, Dr. George T. Prior, M.A. £700 to £800

Assistants, 1st Class, L. J. Spencer, M.A.; Dr. G. F. H. Smith, M.A. £300 to £500
 Keeper of Botany, Dr. A. B. Rendle, F.R.S. £700 to £800
 Assistants, 1st Class, A. Gepp, M.A.; E. G. Baker. £300 to £500
 Assistant, and Class, H. F. Wernham, B.A. £150 to £300

NATIONAL DEBT OFFICE, 19 Old Jewry, E.C.

The National Debt Commissioners were appointed under 25 Geo. III., c. 31 (1786), by which a permanent Sinking Fund was to be established, and a sum of £500,000 issued quarterly to be applied towards the reduction of the National Debt, being commonly spoken of as "Mr. Pitt's Sinking Fund." In 1826 this was superseded by appropriating the surplus income of the year as the Sinking Fund, and this is commonly known as "The Old Sinking Fund." In 1875 "The New Sinking Fund" was set up by Sir Stafford Northcote (28 Vic., c. 45), and this, with the Old Sinking Fund, now mainly operates in reducing the Debt. The Commissioners are at the present time the Speaker, the Chancellor of the Exchequer, the Master of the Rolls, the Lord Chief Justice, the Paymaster-General, and the Governor and Deputy-Governor of the Bank of England. The administrative expenses of the Board were estimated at £53,282 in 1909-10.

Comptroller-General, Sir George Hervey, K.C.B. £1,500
 Private Secretary, J. J. Broe. £700
 Assistant Comptroller, W. G. Turpin. £300 to £1,000
 Actuary, James Blakey, I.S.O. £250
 Chief Clerk, A. T. King, I.S.O. £600
 Principal Clerks, J. Blakey; F. M. Ashley; C. von Berg; H. Manwaring. £500 to £600
 Assistant do., T. Gowland; £200 to £300
 G. F. Pansell; R. R. Kennedy; H. Weatherill; W. F. Donist. £350 to £450
 Brokers, Messrs. Mullens, Marshall & Co. £1,500

NATIONAL GALLERY, Trafalgar Square, S.W.

The National Gallery is the result of a Parliamentary grant of £37,000 in 1824 for the purchase of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1868, 1876 and 1887.

Director, Sir Charles Holroyd. £1,000
 Keeper and Secretary, Hawes Turner. £750

NATIONAL GALLERY, BRITISH ART (The Tate Gallery), Millbank, S.W.

The National Gallery of British Art, better known as "The Tate Gallery," was opened in 1897 on the site of Millbank Gaol, the cost of erection (£60,000) being borne by Sir Henry Tate, who also contributed the nucleus of the present collection.
 Director, Sir Charles Holroyd. (see above)
 Keeper, D. S. MacColl. £350 to £500

NATIONAL PHYSICAL LABORATORY, Teddington, Middlesex.

The National Physical Laboratory, founded in 1889 for standardising and verifying instruments for testing materials and for the determination of physical constants, is controlled by a Board representing the Royal Society and the great Technical Societies. In addition to capital sums, an annual grant of £8,000 is contributed by H. M. Treasury; and subscriptions from the Technical Societies and other sources amount to about £1,000 a year. The Laboratory comprises four main departments: the Observatory Department, formerly Kew Observatory, is at Richmond, while at Teddington the work is organised under the departments of Physics, Engineering, and Metallurgy. The Physics Department comprises Thermometric, Electrical, Metrological, and Optical Divisions. In addition, an Observatory has recently been opened at Eskdalemuir, Dumfriesshire, for research on Terrestrial Magnetism, Seismology, &c.

Chairman, The President of the Royal Society.
 Do. of Executive Committee, Lord Rayleigh, O.M., F.R.S.
 Director, R. T. Glazebrook, D.Sc., F.R.S.
 Supt. Observatory Dept., Richmond, Charles Chree, LL.D., F.R.S.

Storr; E. T. Cratchley | £250 to £400 |

PRIVY COUNCIL OFFICE, Whitehall, S.W.

The origin of the Privy Council is somewhat obscure. At the present time it consists of certain eminent persons whose names are given on p. 202. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g., the Judicial Committee of the Board of Trade, &c. The Lord President of the Council is the Fourth Great Officer of State, and as such is always a prominent member of the Cabinet.

Lord President of the Council, Viscount Wolverhampton, O.C.B.	£2,000
Private Sec., H. J. Stanley	£300
Clerk of the Council, Sir Almeric W. Fitzroy, B.C.	£1,500
Deputy do. & Chief Clerk, J. C. Ledlie, B.C.	£1,500
Senior Clerk, Chas. J. Dalrymple Hay	£600 to £800
Staff Clerk, H. E. Moon, I.S.O.	£300 to £400

PUBLIC WORKS LOAN BOARD, Old Jewry, E.C.

The Public Works Loan Board was created in 1817 for the purpose of advancing money to Municipal Authorities for Public Works. The total amount thus borrowed in 1908-9 amounted to £2,714,068.

Chairman, Hon. Herbert C. Gibbs	unp.
Deputy-Chairman, E. Norman	unp.
Secretary, R. Philpot, C.B.	£5,500
Chief Clerk, B. Allen	£600 to £800
Solicitor, Chas. Hy. Davis	£1,200 to £1,500
Chief Clerk to do., C. L. Nicholson	£400 to £500
Principal Clerk (in charge of accounts), F. W. B. Godrich	£500 to £600

QUEEN ANNE'S BOUNTY, 3 Dean's Yard, S.W.

Incorporated in 1704, when Queen Anne, with the consent of Parliament, transferred to the Governors the annual income of the "first fruits" and "tithes" derived from the sees, dignities, and benefices, with a view to the augmentation of insufficiently endowed livings. The charges were originally levied on all clerical incomes and paid to the Pope, but were made part of the Crown revenue by Henry VIII. More than half of the benefices in England and Wales are free from these charges, having either been exempted from them by statute or formed since the charges were imposed.

"First fruits" represent one year's income of a benefice in the time of Henry VIII.; the "tithes" an annual sum of a tenth part of that income. The income from this source amounts to about £15,000 per year, which, with the surplus income from capital held by the Governors, is distributed in grants to meet benefactions awarded to benefices not exceeding £300 in net annual value. The total amount distributed in 1908 was about £31,530. The Governors act as trustees for endowments and many descriptions of Church funds. They are also empowered to lend money upon mortgage of benefices for improvements to parsonage houses and farm buildings, in certain cases for rebuilding chancels, and for dilapidations.

Secretary & Treasurer, William R. Le Fanu.

Chief Clerk, Wm. Lipscomb.

Senior Clerks, George Simpson; Henry Groves; John P. Sainsford; V. Genville Brookes; R. G. Rowland.

Junior Clerks (Upper Division), E. Jump; M. Rogers; W. Russell; D. Smeaton; W. Holford; W. J. P. Smith; A. G. Spencer; S. D. Knight.

Solicitor, F. G. Hughes.

Asst. Solicitor, W. G. Hannah.

Architect, William Alfred Hughes.

Auditor, H. C. Garland, 33 Nicholas Lane, E.C.

RECORD OFFICE, THE PUBLIC,

Chancery Lane, W.C.

The Public Record Office as it now stands was completed in 1900 for the safe custody of the Public Records, which were first ordered to be kept by Henry I. at the beginning of the twelfth century. The administrative expenses were estimated at £24,800 in 1908-9. (For hours see p. 400.)

Keeper of the Records, The Master of the Rolls.

Deputy, Sir H. C. Maxwell-Lyte, K.C.B. £1,400

Assistant Keeper and Secretary, S. R. Scargill-Bird, £800

Assistant Keepers, John E. E. Sharp; G. F. Handcock; R. A. Roberts; R. F. Isaacson; G. J. Morris; H. Rodney

£500 to £700

Clerks, E. G. Atkinson; E. Salisbury; R. H. Brodie; H. Hall; J. G. Black; C. G. Crump; A. St. J. Story-Maskelyne; R. G. Fowler; J. C. Lyle; M. S. Glineson; C. Johnson; A. E. Stamp; H. E. Headlam; J. B. W. Chapman; C. T. Flower; S. C. Ratcliff; A. E. Bland; M. C. B. Dawes; C. H. Jenkinson; J. J. O'Reilly

£150 to £500

Land Revenue Records and Enrolments.

Keeper of the Records, Sir H. C. Maxwell-Lyte, K.C.B.

SALFORD HUNDRED COURT OF RECORD,

Albert Square, Manchester.

The Court of Record for the Hundred of Salford dates from Anglo-Saxon times, and was left undisturbed by the Judicature Act of 1873.

High Steward, Rt. Hon. the Earl of Selson.

Judge, John Roskill, K.C.

Registrar, Sir William Henry Talbot (Town Clerk).

Deputy Registrar, Harry Elliott.

Chief Clerk, F. Hall Taylor, M.A.

Head Bailiff, G. Mountain.

STATIONERY OFFICE,

Prince's Street, Storey's Gate, S.W.

H.M. Stationery Office was established in 1782, and among its duties are the supply of books and stationery to Government Departments, and the superintendence and control of Government printing, &c., contracts. The Controller, under Letters Patent, is the King's Printer of Acts of Parliament, and in him is vested the Copyright in all Government publications. The administrative expenses were estimated at £39,660 for 1909-10.

Controller, Rowland Bailey, M.V.O. £1,200 to £1,500

Private Sec., W. R. Codling.

Asst. Controller, W. G. Newto. £700 to £800

Superintendent of Demands, R. Barton. £500 to £750

Accountant, W. F. Gorin. £500 to £600

Supt. of Paper, W. G. Wightman. £500 to £650

Clerk of Publications, A. J. Ellis. £450 to £600

Supt. of Stores, I. A. H. Watson. £450 to £600

Clerk in Charge, Dublin, F. Hayward. £642

Do., Edinburgh, C. H. Balmain. £350 to £450

Assistants to Heads of Branches, L. W. Hill (Dublin); H. E. Pittman; A. L. Scroech; G. H. Thwaites; H. M. Welch; G. H. Wright. £300 to £400

Clerk (Old Estab.), J. Lotts. £300 to £400

Minor Staff Officers, E. W. E. Liddington; W. R. Codling; G. McIsaac, £250 to £350; J. Boyd; E. H. Chapman; H. A. White. £200 to £300

Supt. of Printing, T. D. Dutton. £200 to £300

Assist. do., W. G. Bishop. £250 to £400

Technical Assist. to Supt. of Demands, C. W. Howard, £450; J. C. Rowden. £330

Examiners of Printers' Accounts, J. E. C. Bateman; A. J. Biggs; G. W. Riley. £275 to £375

Asst. to Supt. of Printing, J. Paterson. £200 to £300

Asst. Examiner of Printing and Binding, J. E. H. Wilson (Dublin). £200 to £300

Supt. of Binding, F. J. Williamson. £450 to £600

Assist. do., J. R. Crane. £300

Exam. of Binders' Accts., G. D. Rose. £300

THAMES CONSERVANCY,

Victoria Embankment, E.C.

The Conservation of the River Thames was granted to the Lord Mayor of London in 1287, and delegated to 12 Conservators in 1857, the powers being reconstituted in 1894. The Port of London Act, 1908, took over as from March 31, 1909, all rights, powers, and duties of the Conservators in respect of the river below Teddington.

Chairman, Lord Desborough, K.C.V.O.

Secretary,

TRADE BOARD OF,

Whitehall Gardens and Gwydyr House, Whitehall, S.W.

A Board of Trade and Plantations was established by Charles II. in 1666, and in place of this body a Committee of the Council on Trade was established in 1786. The duties of this Committee (which, unlike the other Council Committees, has a president of its own) are to collect Trade Statistics, control the issue of Patents, keep the Standards of Weights and Measures, the non-legal machinery of Bankruptcy, the Registration of Joint Stock Companies, Railway Companies, Water and Gas Companies, Electric Lighting, Harbours and Light-houses, and Merchant Shipping, acting under the latter heading as Auditor of the Trinity House accounts. The administrative expenses were £39,700 in 1909-10.

President, Rt. Hon. Winston S. Churchill, M.P. £2,000

Private Secs., E. H. Marsh, C.M.G., and J. A. Webster, £500; Capt. Hon. F. E. Guest (unpaid).

Permanent Sec., Sir H. Llewellyn Smith, K.C.B. £2,000

Private Secs., E. R. Eddison and W. W. Marsh.

Parliamentary Sec., H. J. Tennant, M.P. £1,200

Private Sec., E. W. Rowntree. £1,000

Four Assistant Secretaries (£1,000 to £1,200 and £1,200 to £1,500).

Harbour Department, Hon. W. W. Pelham, C.B.

Marine Department, Sir Walter J. Howell, K.C.B.

Commercial, Labour, and Statistical Department, G. R. Askwith.

Railway Department, W. F. Marwood.

Principal Officer for London District, J. B. Park £650
Chief Examiner of Engineers, W. T. Seaton £500 to £600

TREASURY, Whitehall, S.W.

The Lord High Treasurer of England is the Third Great Officer of State, the office having been "in commission" (with certain intervals since 1652). The Commissioners for executing the office of Treasurer of the Exchequer of Great Britain and Lord High Treasurer of Ireland consist of the First Lord, who, if a Commoner, is, *ex officio*, Leader of the House of Commons, the Chancellor of the Exchequer, and some Junior Lords, with certain Secretaries and a staff of officials. The duties of the First Lord are mainly political, as also are those of the Patronage Secretary and the Junior Lords; the duties of the Chancellor of the Exchequer are mainly financial, in that he performs the ancient duties of the Under-Treasurer and, after agreement with the heads of the great spending departments, arranges for the great collecting departments to provide sufficient moneys to meet the needs of the year. The papers are laid before Parliament in the form of a Budget, which the Chancellor expounds to the House, these plans being accepted, modified, or rejected by the House.

FIRST LORD OF THE TREASURY—

The Rt. Hon. Herbert Henry Asquith, K.C., M.P.
(Prime Minister) £5,000
Private Secs. to Prime Minister, V. Nash, C.B. £500;

and Dic. Clerk, Upper Grade, W. A. Walker £350

Fines and Penalties, 30 Abingdon Street, S.W.

Receiver, Thomas Edward Kebbel, M.A.

TRINITY HOUSE, Tower Hill, E.C.

Trinity House, the first General Lighthouse and Pilotage authority in the Kingdom, was a body of importance when Henry VIII. granted the institution its first charter in 1534, *inter alia* "for the relief, increase and augmentation of the Shipping of this Realm of England." Since that period the duty of erecting and maintaining lighthouses and other marks and signs of the sea has by Royal Charter and Acts of Parliament been entrusted to this Corporation. Until 1854 all light dues were collected by Trinity House, and until 1874 Masters of the Navy were examined by the Elder Brethren. The present duties of the Elder Brethren have reference to Pilotage, Lighthouses, Beacons, &c., and attendance at the Admiralty Court to act as assessors, also to advise the Board of Trade in nautical matters. There are 13 Acting Elder Brethren, of whom 2 are elected from the Royal Navy and 11 from the Merchant Service; there are also 11 Honorary Elder Brethren. The income of the Corporation derived from light dues levied on shipping entering and leaving British ports amounts to £300,000 per annum, which is expended in the maintenance of the Lighthouse and coast-marking system of England and Wales, under the financial control of the Board of Trade. The Corporation also administers certain charitable trusts specifically dedicated to the relief of decayed master mariners and their widows, the accounts in respect of which are rendered to the Charity Commissioners.

ELDER BRETHREN.

H.M. The King; Admiral H.R.H. the Prince of Wales, K.G. (Master); Capt. Sir G. R. Vyvyan, K.C.M.G., R.N. (Deputy Master); Capt. A. E. Barlow; Rt. Hon. Lord George Hamilton, G.C.S.I.; Rear-Adm. H. B. Stewart; The Earl of Rosebery, K.G., K.T.; Capt. A. E. Bell; Field-Marshal H.R.H. the Duke of Connaught and Strathearn, K.G.; Capt. A. S. Thompson, C.B.; Capt. A. W. Clarke; Capt. R. Hoare; Capt. H. A. Blake; Rt. Hon. J. Chamberlain, M.P.; Capt. L. H. Crawford, C.B.; Rt. Hon. A. J. Balfour, M.P.; The Earl of Selborne, G.C.M.G.; Vice-Adm. H.S.H. Prince Louis of Battenberg, K.G., K.T.; The Earl Spencer, K.G.; Capt. O. P. Marshall; Capt. T. Golding; Capt. J. C. H. Flint; Lt. Hon. H. H. Asquith, K.C., M.P.

Secretary, Arthur Owen.

TRUSTEE SAVINGS BANKS,

INSPECTION COMMITTEE, 9 Serle Street, W.C.

Trustee Savings Banks were first made the subject of legislation in 1826, and an Inspection Committee was appointed in 1837. The funds deposited with the Government amounted in 1908 to £54,475,705 (cash and stock, held on behalf of 1,782,325 depositors)—an increase during the year of 5,508 depositors.

Chairman, Sir Albert K. Rollit, D.C.L.

Vice-Chairman, Thomas A. Welton, F.R.S.

Secretary, W. S. Cameron.

WALLACE COLLECTION,

Hertford House, Manchester Square, W.

The Wallace Collection was bequeathed to the nation by the widow of Sir Rd. Wallace, Bt., K.C.B., M.P., in 1837, and Hertford House was subsequently acquired by the Government. The expenses were estimated at £7,414 in 1909-10.

Keeper & Secretary, Claude Phillips. £500

Inspector of Armaments, Guy F. Laking, M.V.O., F.R.S. hon.

Clerk, S. J. Camp. £100 to £300

WAR OFFICE, Whitehall, S.W.

A Secretary of State for War was first appointed in 1794, the control of the Land Forces of the Crown having been previously exercised by a Secretary at War, who was responsible to Parliament through the Home Secretary. In 1801 the Secretary of State for War was also given the business of the Colonies, of which he was relieved in 1824 by the appointment of a Secretary of State for that purpose. In 1904 an Army Council was

created by Letters Patent, and to this Council were thereby transferred all the powers exercised under the Royal prerogative by the Secretary of State for War and the Commander-in-Chief.

Army Council.

Secretary of State for War, Rt. Hon. Richard Burdon Haldane, K.C., D.C.L., LL.D., F.R.S., M.P. £5,000

- Ostrich** (1901), 6, 355 (6250 f.d.), t.b.d., 30 kts., Home Fleet.
- Otter** (1896), 6, 385 (6300 f.d.), t.b.d., 30 kts., Hong Kong.
- Owe**, (1905), 550 (7000 f.d.), t.b.d., 25½ kts., Home Fleet.
- Pandora** (1900), 2200 (7000 f.d.), 3rd cl. cruiser, Cape of Good Hope. *Comm.* Alexander P. Davidson.
- Panther** (1897), 6, 300 (6300 f.d.), t.b.d., 30 kts., Home Fleet.
- Pathfinder** (1904), 10, 3000 (16500 f.d.), scout, 25 kts., Home Fleet. *Comm.* Francis G. St. John.
- Patrol** (1904), 10, 3000 (16500 f.d.), scout, 25 kts., Home Fleet. *Comm.* Francis M. Leake.
- Pegasus** (1897), 8, 2135 (5000), 3rd cl. cruiser, 20 kts., Australia. *Comm.* Arthur H. C. C. Home.
- Pelorus** (1896), 8, 2135 (5000), 3rd cl. cruiser, Devonport.
- Pembroke** (late *Trent*), gunboat, 363 tons (200 n.d.), Chatham. *Adm.* Sir Charles C. Drury, G.C.V.O. (*Commander-in-Chief at the Nore, Flag flown in "Undine"*); *Rear-Adm.* Robert N. Ominanney (*Superintendent, Chatham Yard*); *Comm.* Arthur G. Smith.
- Penguin** (1876), 2, 1130 (700), sloop, 11 kts., depot and receiving ship, Sydney. *Capt.* John P. Rolleston.
- Perseus** (1898), 8, 2135 (5000), 3rd cl. cruiser, East Indies. *Comm.* Frederic G. Bird.
- Peterel** (1899), 6, 365 (6200 f.d.), t.b.d., 30 kts., Home Fleet.
- Philomel** (1890), 8, 2575 (7500 f.d.), 3rd cl. cruiser, 19 kts., East Indies. *Comm.* Victor G. Gurner.
- Pineher**, ocean-going t.b.d., 940 tons, turbine, building.
- Pioneer** (1899), 8, 2200 (5000), 3rd cl. cruiser, 20 kts., Australia. *Comm.* William F. Blunt.
- Plucky** (1870), 2, 195 (90), 3rd cl. gunboat, Portsmouth.
- Poreupina** (1895), 6, 280 (3900 f.d.), t.b.d., 28 kts., Chatham.
- Powerful** (1895), 14, 14200 (25000), 1st cl. cruiser, 21½ kts., flagship, Australia. *Vice-Adm.* Sir Richard Poore, Bt., K.C.B.; *Capt.* Cecil I. Prowse; *Comm.* Humphrey W. Bowring.

President (late *Gannet*), 1130 tons, sloop, South-West India Docks, London. *Comm.* Lawrence A. Tawney.

PRINCE GEORGE (1895), 16, 14900 (10000), 1st cl. battleship, 17½ kts., Portsmouth.

PRINCE OF WALES (1902), 16, 15000 (15000), 1st cl. battleship, 18 kts., Atlantic Fleet, flagship of *Vice-Adm.* Prince Louis of Battenberg, G.C.B., A.D.C. *Capt.* Edward M. Phillpotts; *Comm.* Robert G. D. Dewar.

Prometheus (1898), 8, 2135 (5000), 3rd cl. cruiser, 20 kts., Australia. *Comm.* John O. T. Glossop.

Proserpine (1896), 8, 2135 (5000), 3rd cl. cruiser, 18½ kts., East Indies. *Comm.* Herbert J. T. Marshall.

Psyche (1898), 8, 2135 (5000), 3rd cl. cruiser, Australia. *Comm.* Henry B. Montagu.

Pyramus (1898), 8, 2135 (5000), 3rd cl. cruiser, 20 kts., Australia. *Comm.* Stephen H. Radcliffe.

Quail (1895), 6, 360 (6300 *f.d.*), t.b.d., 30½ kts., Home Fleet.

QUEEN (1902), 16 15000 (15000), 1st cl. battleship, 18 kts., Atlantic Fleet. *Capt.* David Beatty, M.V.O.; *Comm.* Charles L. Lambie.

Racehorse (1900), 6, 360 (6300 *f.d.*), t.b.d., 30 kts., Home Fleet.

Racer (1884), 8, 970 (850), sloop, 11 kts., for instruction of naval cadets, Osborne. *Capt.* Arthur H. Christian.

Racon, ocean-going t.b.d., 920 tons, turbine, building.

RAMILLIES (1892), 14, 14150 (9000), 1st cl. battleship, 17½ kts., Home Fleet. *Capt.* Arthur W. Ewart.

Ranger (1895), 6, 295 (4000 *f.d.*), t.b.d., 27 kts., Home Fleet.

Rattlesnake, ocean-going t.b.d., 900 tons, turbine, building.

Raven (1882), 4, 465 (360), 2nd cl. gunboat, 9½ kts., Portsmouth.

Recruit (1901), 6, 300 (5800 *f.d.*), t.b.d., 30 kts., Home Fleet.

Redbreast (1888), 6, 805 (720), 1st cl. gunboat, 13 kts., East Indies.

Renard, ocean-going t.b.d., 920 tons, turbine, building.

RENOWN (1895), 14, 14350 (10000), 1st cl. battleship, 18 kts., Home Fleet. *Capt.* Charles W. Winnington Ingram.

REPULSE (1892), 14, 14150 (9000), 1st cl. battleship, 17½ kts., Home Fleet. *Capt.* George B. Hulton.

† *Research* (1888), 520 tons (450), surveying service, Portsmouth. *Capt.* Cortland H. Simpson.

RESOLUTION (1892), 14, 14150 (9000), 1st cl. battleship, 17½ kts., Home Fleet.

REVENGE (1892), 14, 14150 (9000), 1st cl. battleship, 17½ kts., Portsmouth. *Capt.* Vivian H. G. Bernard; *Comm.* James T. Bush.

Ribble (1903), 6, 520 (7500 *f.d.*), t.b.d., 26 kts., Home Fleet.

Rifeman, t.b.d., building.

Rinaldo, sloop, 980 tons (1400 *n.d.*), Devonport.

Ringdove (1905), 1st cl. gunboat, 805 tons (1200 *f.d.*), Scottish Fisheries.

Robin (1898), 85 (240), shallow-draught steamer for river service, China.

Rocket (1894), 6, 280 (4100 *f.d.*), t.b.d., 27½ kts., Portsmouth.

Roebuck (1901), 6360 (6000 *f.d.*), t.b.d., 30 kts., Home Fleet.

Rother (1904), 6, 550 (7000 *f.d.*), t.b.d., 25½ kts., Home Fleet.

ROXBURGH (1904), 12, 10850 (22000 *f.d.*), 1st cl. cruiser, 22½ kts., Home Fleet. *Capt.* Morgan Singer; *Comm.* John R. Le H. Ward.

Royal Arthur (1891), 13, 7700 (10000), 1st cl. cruiser, 18½ kts., Home Fleet. *Capt.* Herbert W. James.

ROYAL OAK (1892), 14, 14150 (9000), 1st cl. battleship, 17½ kts., Home Fleet. *Comm.* Thomas L. Shelford.

ROYAL SOVEREIGN (1891), 14, 14150 (9000), 1st cl. battleship, 17½ kts., Home Fleet. *Comm.* Robert G. Corbett.

Ruby, t.b.d., building.

RUSSELL (1901), 16, 14000 (13000), 1st cl. battleship, 19 kts., Mediterranean. *Capt.* William de Salis, M.V.O., A.D.C.; *Comm.* Harry H. Smyth, St. George (1892), 12, 7700 (10000), 1st cl. cruiser, 19½ kts., Chatham.

ST. VINCENT, battleship (1908), 19250 tons (24500 *n.d.*) completing at Portsmouth.

Salmon (1895), 6, 280 (5600 *f.d.*), t.b.d., 27½ kts., Home Fleet.

Sandpiper (1897), 85 tons (240), shallow-draught steamer for river service, China. *Lieut.* and *Comm.* Hugh R. Tickell.

Sapphire (1904), 12, 3000 (6800 *f.d.*), 3rd cl. cruiser, 21½ kts., Home Fleet. *Capt.* Edwyn S. Alexander-Sinclair, M.V.O.

Supho (1891), 8, 3400 (7000), 2nd cl. cruiser, 20½ kts., Home Fleet. *Comm.* Harold Christian.

Saracen, 2, ocean-going t.b.d., 880 (5500) 33 kts., Home Fleet. *Comm.* Charles Tibbitts, M.V.O.

Savage, ocean-going t.b.d., 885 tons, turbine, building.

Scorpion, ocean-going t.b.d., 890 tons, turbine, building.

Seourge, ocean-going t.b.d., 925 tons, turbine, building.

Scylla (1892), 8, 3400 (7000), 2nd cl. cruiser, 20½ kts. (attached to Fourth Cruiser Squadron). *Comm.* Bertram S. Thesiger.

Seagull (1893), 2, 735 (2500), 1st cl. torpedo gunboat, 20 kts., Home Fleet.

Seahorse (1880), 670 tons (1100), particular service. *Staff Capt.* in *comd.* Frederick C. A. Crooke.

Seal (1897), 6, 360 tons (6300 *f.d.*), t.b.d., 30 kts., Home Fleet. *Comm.* George J. Todd.

Sealark (1906), steam yacht (surveying vessel), 900 (550), 11 kts. *Comm.* Bishop O. M. Davy.

Seintinel (1904), 10, 2940 (17000 *f.d.*), scout, 25 kts., Home Fleet. *Comm.* John G. de O. Cooke.

SHANNON (1906), 14, 14600 (2700), armoured cruiser, 23 kts., flagship, Second Cruiser Squadron. Home Fleet. *Rear-Adm.* Robert S. Lowry; *Capt.* James A. Fergusson; *Comm.* John D. Allen.

Shark (1894), 6, 280 (4100 *f.d.*), t.b.d., 27½ kts., Home Fleet.

Sharpshooter (1888), 2, 735 (3000), 1st cl. torpedo gunboat, 20 kts., Home Fleet.

Shearwater (1901), 6, 980 (1400), sloop, W. Coast of America. *Comm.* Chas. W. G. Crawford.

Sheldrake, t.b.d., building.

Sirius (1890), 8, 3600 (7000), 2nd cl. cruiser, 19½ kts., Home Fleet.

ley, R.N.

SLANG TERMS FOR MONEY.

IN addition to the ordinary terms there are others which, although puzzling to a foreigner, are tolerably well understood in this country. In Scotland, a man who flies "kites" may not be worth a "bottle," and in England not worth a "mag"—coins which no one ever saw. Such a man will toss you for a "bob." He, of course, would be shunned by the lady who lost a "pony" on last year's Oaks, and by her husband who lost a "monkey" on the Derby a day or two previously. A gentleman who is worth a "plum" (£100,000) need never be short of "tin"; while the outcast who begs a few "coppers" in order to procure a bed generally has no "blunt." The following words are commonly in use:—

A Ticey (or Ticky) = 3d.

A Joey = 4d.

A Tanner = 6d.

A Bob = 1s.

Half a Bull = 2s. 6d.

A Thick 'Un = 1s.

A Jimmy = 1s.

A Quid = 1s.

Dibs, Dust, Rhino, The Ready, Oof, Mopuses,
Brass, or Spondulices = Money generally.

Filthy Lucre = Scottish well-worn £s. notes.

A Pony = £25.

A Monkey = £500.

A Kite = An accommo-
dation Bill.

Browns = Coppers.

Tin = Money generally.

Blunt = Silver, or money
in general.

TO ESTIMATE WEIGHT.

Cattle.

FORMULA—

$L \text{ (in feet)} \times 10 \times G^2 \text{ (in feet)} = \text{weight in lb.}$

$\frac{3}{4}$
[L = length from hollow on crop (forepart of shoulder blade) to root of tail. G = girth close behind the shoulder.]

Hay and Straw.

HAY FORMULA—

$\text{Height} \times \text{breadth} \times \text{length} = \text{tons of hay.}$

xx

STRAW FORMULA—

$\text{Height} \times \text{breadth} \times \text{length} = \text{tons of straw.}$

x6

[Height = distance from ground to eaves + $\frac{1}{2}$ distance from eaves to ridge in yards.]

CIRCULAR STACKS—

$\frac{3}{4} \times \text{radius}^2 \times \text{height} = \text{tons of hay.}$

xx

$\frac{3}{4} \times \text{radius}^2 \times \text{height} = \text{tons of straw.}$

x6

[Height = distance from ground to eaves + $\frac{1}{2}$ distance from eaves to apex in yards.]

The Army List.

(See also *Indian Army List*, pp. 516-519 of Supplement.)

THE KING.

Personal Aides-de-Camp to the King—General H.R.H. Prince of Wales, K.G.; Field-Marshal H.R.H. Duke of Connaught and Strathearn, K.G.; Capt. H.R.H. Prince Arthur of Connaught, K.G., R. Scots Greys; General H.R.H. Prince Christian of Schleswig-Holstein, K.G.

AIDES-DE-CAMP TO THE KING.

Regular Forces.

McCallum, Col. Sir H. E., G.C.M.G., R.E.

---	--

OFFICERS OF THE ORDERS OF KNIGHTHOOD.

*. For full particulars see "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE."

THE MOST HONOURABLE ORDER OF THE BATH (1399). *Tria juncta in uno.* (Remodelled 1725 and 1815, and enlarged twelve times since.)—THE SOVEREIGN; Great Master and Principal Knight Grand Cross, Field-Marshal H.R.H. the Duke of Connaught and Strathearn, K.G., K.T., K.P., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O.; Dean of the Order, The Dean of Westminster; *Each King of Arms*, Rt. Hon. Sir Spencer Cecil Brabazon Pousoupy-Fane, G.C.B., L.S.O.; Registrar and Secretary, The Comptroller of the Lord Chamberlain's Department, St. James's Palace, S.W.—for the time being Col. Sir Douglas Dawson, K.C.V.O., C.M.G.; Gentleman Usher of the Scarlet Rod, Charles George Barrington, C.B.; *Chancery*, The Lord Chamberlain's Deputy, G.C.B.; Knight Grand Cross; K.C.B., Knight Commander; C.B., Companion—each marked (m) or (c) for Mil. or Civ. Division.

THE MOST EXALTED ORDER OF THE STAR OF INDIA (1861). *Heaven's Light our Guide.*—THE KING-EMPEROR; Grand Master and First and Principal Knight Grand Commander, Viceroy and Gov.-Gen. of India; Secretary (in India), Spencer Harcourt Butler, C.I.E.; Registrar, The Comptroller of the Lord Chamberlain's Department, St. James's Palace, S.W.—for the time being Col. Sir Douglas Dawson, K.C.V.O., C.M.G., G.C.S.I., Knight Grand Commander; K.C.S.I., Knight Commander; C.S.I., Companion.

THE MOST DISTINGUISHED ORDER OF ST. MICHAEL AND ST. GEORGE (1818). *Auspiciis melioris aevi.*—THE SOVEREIGN; Grand

Master and First or Principal Knight Grand Cross, H.R.H. the Prince of Wales, K.G., K.T., K.P., G.C.S.I., G.C.I.E., G.C.V.O., L.S.O.; *Frade*, Rt. Rev. Henry Hutchinson Montgomery, D.D.; *Chancellor*, His Grace The Duke of Argyll, K.G., K.T., G.C.M.G., G.C.V.O.; *Secretary*, Sir P. J. S. Hopwood, G.C.M.G., K.C.B.; *King of Arms*, Sir M. F. Ommanney, G.C.M.G., K.C.B., L.S.O.; *Registrar*, Sir C. P. Lucas, K.C.M.G., C.B.; *Officer of Arms*, Sir William Alexander Baillie-Hamilton, K.C.M.G., C.B.; *Chancery*, Colonial Office, S.W.—G.C.M.G., Knight Grand Cross; K.C.M.G., Knight Commander; C.M.G., Companion.

THE MOST EMINENT ORDER OF THE INDIAN EMPIRE (1878). (Since enlarged five times.) *Imperatoris auspiciis.*—THE KING-EMPEROR; Grand Master, The Viceroy and Governor-General of India for the time being—G.C.I.E., Knight Grand Commander; K.C.I.E., Knight Commander; C.I.E., Companion.

THE ROYAL VICTORIAN ORDER (1896).—THE SOVEREIGN; *Chancellor*, The Lord Chamberlain; *Secretary*, The Keeper of His Majesty's Privy Purse. —G.C.V.O., Knight Grand Cross; K.C.V.O., Knight Commander; C.V.O., Commander; M.V.O., Member, marked 4th or 5th Class.

THE KNIGHTS BACHELOR do not constitute an Order, and hence have no officials. There is, however, a "Society of Knights Bachelor" (*Offices*, 3, Stone Buildings, Lincoln's Inn, W.C.; *Registrar*, Sir William Bull, M.P.), for the protection of their interests.

The Deans and Chapters of certain Dioceses (marked * in the following pages) preferred several years ago to take, in lieu of fixed annual money payments, estates estimated at that time to produce the same annual income; they are consequently enjoying more or less from the present agricultural depression.

*Canterbury. £15,000.

Archbishop and Primate of All England, Rt. Hon. and Most Rev. Randall Thomas Davidson, D.D., G.C.V.O. (cons. 1891, 1903. [Lambeth Palace, S.E.]) [Signs Randall Cantuar.]

MEMBERS OF CONVOCATION.

In theory the Church of England is governed by means of its Convocations of Bishops and Clergy: there is a House of Convocation for each province, Canterbury and York. Each Convocation consists of two Houses, the upper confined to the archbishops and bishops, the lower composed of the dean of every cathedral, the archdeacons, with proctors elected from every cathedral chapter, and two more elected by the clergy of every diocese in the province of Canterbury, and by every archdeaconry in the province of York. A fresh election is made with every new Parliament.

PROVINCE OF CANTERBURY.

Upper House.

President.—The Most Rev. the Lord Archbishop. The Right Rev. the Lords Bishops of London; Winchester; Bangor; Bath and Wells; Birmingham; Chichester; Ely; Exeter; Gloucester; Bristol; Hereford; Lichfield; Lincoln; Llandaff; Norwich; Oxford; Peterborough; Rochester; Salisbury; Southwark; Southwell; St. Albans; St. Asaph; St. Davids; Truro; Worcester.

Lower House.

Prolocutor, The Very Rev. the Dean of Windsor. The Very Rev. the Deans. The Venerable the Archdeacons.

Also the following Proctors:

BANGOR.—*Chapter*, Canon Trevor. *Clergy*, T. Edwards; D. R. Lewis.

SOUTHWELL.—*Chapter* (none). *Clergy*, Canon Keymer; C. J. Hamilton.
TRURO.—*Chapter*, A. J. Worledge. *Clergy*, A. C. Thynne; C. E. Hammond.
WINCHESTER.—*Chapter*, Canon A. S. Valpy. *Clergy*, E. F. Bowring; W. Durst.
WINDSOR.—*Chapter*, Rt. Rev. Bishop Barry.
WORCESTER.—*Chapter*, Canon Knox Little. *Clergy*, Canon E. A. Waller; G. Arbuthnot.

Registrar, Harry Wilmot Lee, 3 Creed Lane, Ludgate Hill, E.C.

Actuary, Hugh Childers.

PROVINCE OF YORK.—Upper House.

President.—The Most Rev. the Lord Archbishop. The Right Rev. the Lords Bishops of Durham; Ripon; Chester; Newcastle; Wakefield; Liverpool; Manchester; Carlisle; Sodor and Man.

Lower House.

Prolocutor, Rt. Rev. the Bishop of Beverley, D.D. The Very Reverend the Deans of the Province. The Venerable the Archdeacons.

Also the following Proctors:

YORK.—*Chapter*, The Bishop of Hull; Canon J. Watson. *Clergy*, Canons Argles and Robinson. *Clergy of Cleveland*, C. N. Gray; Ven. Chancellor Hutchings. *Of E. Riding*, Canon Lambert; W. J. F. V. Baker. *Of Sheffield*, Canons Gilmore and Wilson.
CARLISLE.—*Chapter*, Canon Bower. *Clergy*, Canon Hall; F. L. H. Millard. *Clergy of Westmorland*, Canons Trench and Rawnley. *Clergy of Furness*, J. U. N. Bardsley; C. Whitaker.
CHESTER.—*Chapter*, Canon Blencowe. *Clergy*, W. E. Torr; Canon Binney. *Clergy of Macclesfield*, Canon Gore; A. Symonds.
DURHAM.—*Chapter*, Canon Body. *Clergy*, Canons Baily and Hopkinson. *Clergy of Auckland*, Chancellor T. E. Espin; Canon H. Martin.
LIVERPOOL.—*Clergy*, Canons Smithwick and Hodgins. *Clergy of Warrington*, Canon Penrhyn; J. B. Cox.
MANCHESTER.—*Chapter*, Canon Kelly. *Clergy*, Canons Russell and Rountree. *Lancaster*, A. R. Tomlinson; J. Pimblett. *Blackburn*, Bishop Thornton; A. W. M. Weatherly.
NEWCASTLE.—*Clergy of Northumberland*, Canons Lister and Lowe. *Clergy of Lindisfarne*, Canons Wilsden and Walker.
RIPON.—*Chapter*, Canon Garrod. *Clergy of Richmond*, S. G. Beal; H. Pollexfen. *Craven*, Canon Nash; W. A. Shuffrey. *Ripon*, Canon Wood; G. Sharp.
SODOR AND MAN.—*Chapter*, Canon F. J. Moore. *Clergy*, Canon E. B. Savage.
WAKEFIELD.—*Clergy of Halifax*, Canon Ivens and a vacancy. *Clergy of Huddersfield*, Canon How; T. H. Bywater.
Registrar.—Hen. A. Hudson, Minster Yard, York.

THE HOUSES OF LAYMEN.

The House of Laymen for the Province of Canterbury, as also for that of York, consists of members elected by the various Diocesan Conferences, who are themselves elected by the Laity of their respective Parishes or Rural Deaneries. The members are elected with every fresh Parliament.

258 Colonial and Missionary Bishops of the Church of England.

ST. PATRICK'S NATIONAL CATHEDRAL, DUBLIN.

Dean and Ordinary, Very Rev. John Henry Bernard, D.D., D.C.L.

GENERAL SYNOD.

Consisting of House of Bishops (13) and House of Representatives (viz., 208 clerical and 416 lay).

Honorary Secretaries, Ven. Wm. Colquhoun, B.D.; Ven. I. K. Latham, D.D.; Sir J. C. Meredith, LL.D.; Capt. R. Wade Thompson.

Secretary to the REPRESENTATIVE CHURCH BODY (INCORPORATED 1870), Thomas Greene, M.A., 52 St. Stephen's Green E., Dublin.

By the Act of Union, 1800, the Church of Ireland was united with the Church of England, and the Sovereign, as one of its members, supreme governor on earth. By the Act of 1869 this union was severed, and on Jan. 1, 1871, the Church of Ireland resumed her independent position. The Act of 1869 not only disestablished the Irish Church, but also took away her endowments, nothing being left but the right to the life services of the Annuitant Bishops and Clergy (which were commuted for a capital sum), the right to claim churches in use for divine service, the right to buy the See and Glebe Houses (with garden and curtilage), and £500,000 in lieu of private endowments.

The supreme governing body of the Church of Ireland is the GENERAL SYNOD, which meets annually.

Subject to the GENERAL SYNOD are 23 Diocesan Synods, which are assisted by smaller elected bodies called Diocesan Councils.

The Bishop of the Diocese is chosen by the clerical and lay members of the Diocesan Synod. The Primate is chosen by the House of Bishops from amongst their own number.

The incumbent of the Parish is appointed by a Board of Nomination, consisting of 7 persons, viz.:—The Bishop, 3 diocesan nominators (2 clerical and 1 lay) appointed by the Diocesan Synod, and 3 parochial nominators (lay) appointed by the registered vestrymen of the parish.

The financial trustees of the Church are the REPRESENTATIVE BODY, composed of the Archbishops and Bishops, 13 clergymen and 26 laymen, chosen by the Diocesan Representatives in the General Synod, with 12 co-opted members (clerical or lay). This body holds the property of the Church, and administers its funds, subject to the General Synod.

The first property it held was the capital sum £7,581,075, representing the life annuities of the Bishops and Clergy paid over as commutation money by the Church Commissioners, and also £500,000 compensation for private endowments. The commutation capital now amounts only to £556,324, charged with annuities to 126 annuitants. The funds, however, in the custody of the Representative Body amount in all to £8,878,274, made up of Commutation £556,324, Parochial Sustentation £5,484,004, Episcopal Sustentation £563,944, Glebe purchase £351,036, Miscellaneous purposes £1,867,750, and Balances £55,213.

Since 1869, members of the Church have paid in to the Representative Body a total sum of £6,715,557. The interest of the Parochial Sustentation Fund is approximately £205,650. The total amount of assessment for stipend paid by parishes, 1907, was £100,616, and the total amount paid for stipends under Diocesan Schemes was £269,946.

The number of members of the Church of Ireland, by the Census of 1901, was 581,089, or 13.0 per cent. of the entire population.

Churches, Mission Stations, &c., 404. Parsonages, 148. Clergy, 335. Communicants, 51,289.

THE CHURCH OF SCOTLAND by law established is Presbyterian in constitution, and is governed by Kirk Sessions, Presbyteries, Synods, and the General Assembly, which consists of both clerical and lay representatives from each of the Presbyteries, and also from the universities and royal burghs. It is presided over by a Moderator (chosen annually by the Assembly), to whom the King has granted precedence in Scotland, during his term of office, next after the Lord Chancellor of Great Britain. The Sovereign is represented by a Lord High Commissioner (appointed each year by the Crown), who receives the sum of £2,000 towards his expenses. The country, for Church purposes, is divided into 16 synods and 84 presbyteries, and there are over 1,800 ministers and licentiates engaged in ministerial work. The Church population exceeds the aggregate of all the other Presbyterian bodies, and is estimated at about

half the whole population of Scotland; the number of communicants in 1908 was 706,653. The sum of £554,145 was raised in 1908 for church and missionary purposes. Within the last 50 years 453 chapels, at a cost of £1,681,330, have been endowed and erected into parishes *quoad sacra*. The original parishes were 924, in addition to which there are 453 new and 42 Parliamentary parishes, a total of 1,419; besides 246 churches and mission stations. The Presbyterian form of Church government as first set up in Scotland was superseded in 1662 by the Episcopal Church under the Stuarts; but at the Revolution in 1688, Presbyterianism regained the legal establishment, which it still preserves. LORD HIGH COMMISSIONER, The Lord Kinmaird.

MODERATOR, 1909, Right Rev. James Robertson, D.D. Agent, A. L. Menzies, W.S., 54 Castle St., Edinburgh.

OTHER PRESBYTERIAN CHURCHES.

PRESBYTERIANISM HAS SEVERAL SUBDIVISIONS.

(1) *The United Free Church of Scotland* was formed by the Union on October 31st, 1900, of the *Free Church of Scotland* and the *United Presbyterian Church*. The United Church, by rearrangement of the Synods and Presbyteries, has 12 Synods and 64 Presbyteries. The Supreme Court is the General Assembly, which meets every year at the same time as that of the Established Church. In the year ending 31 Dec., 1908, there were 1,620 congregations and 27 preaching stations. The total membership exceeded 506,000, and there were 2,362 Sunday Schools, with 240,303 scholars and 25,361 teachers. In 15 Foreign Mission Fields there are 331 European Mission Agents and 4,063 native pastors, evangelists, and teachers, including in both cases those of the Women's Foreign Mission. The income of the Church at the close of last financial year amounted to £1,089,101 7s. 10d. Offices, 1 Castle Terrace, Edinburgh.

(2) *The Presbyterian Church in Ireland*.—According to the Census of 1901, the members of the various Presbyterian churches in Ireland were 443,494. The largest of these, under the superintendence of the General Assembly, consists of 36 presbyteries, 649 ministers, 568 congregations, with 106,472 communicants, 85,298 families, 8,142

Sabbath-school teachers, and 94,194 scholars. During the year 1908-1909 this branch contributed by congregational effort £222,581 for religious, charitable, and missionary purposes. The total income for the year for all purposes was £285,089. It possesses two Colleges, with power to confer Theological Degrees, comprising a staff of 14 professors and 2 lecturers, and has 31 ministerial with 5 medical missionaries in foreign parts. *General Secretary*, Rev. W. J. Lowe, D.D., Church House, Belfast.

(3) *The Presbyterian Church of England* has 12 presbyteries, 353 congregations, 12 preaching stations, and 86,421 members. It has a Theological College (Westminster College, Cambridge), and supports 82 missionaries abroad, including 34 women. In 1908 the amount raised for all purposes was £289,826. *General Secretary*, Rev. W. M. Macphail, M.A. *Financial Sec.*, John Leggat, 7 E. India Avenue, E.C. *Publications Office*, 21 Warwick Lane, Paternoster Row, E.C.

(4) The less numerous divisions are: *The Free Church of Scotland*, consisting of those members who did not unite with the U.P. Church; the Reformed Presbyterian Synod, the Eastern Reformed Synod, the United Original Seceders, the Secession Presbytery in Ireland, and the Synod of the Church of Scotland in England.

The Methodist Churches.

UNDER the general designation of METHODISTS are included all those religious bodies which owe their existence, directly or indirectly, to the efforts of the Revs. John and Charles Wesley. The most numerous and influential of them are—

Western Methodists, the original body founded in 1739 by these two brothers. The first Conference, consisting of six clergymen and four laymen, was held in 1744. The conference is now composed in its Representative Session of 300 ministers and 300 laymen, with a ministerial president and secretary at its head, elected year by year. The Wesleysans are governed primarily by the Conference, secondarily by the Synods, which are semi-annual meetings of the ministers and selected laymen in each district, over which a chairman is appointed by the Conference, and thirdly by quarterly meetings of the ministers and lay officers of each circuit. The authority of both these last meetings is subordinate to the Conference, which has the supreme legislative and judicial power in Methodism. When Wesley died the number of members was 76,968, and

since then the increase has been so great that about 12,000,000 people are now receiving Methodist instruction in various parts of the world. At Washington, in October, 1891, it was reported that there were more than 30,000,000 Methodists. This statement has been recently repeated by leading Wesleysans; but no evidence is forthcoming to establish its accuracy, which is more than doubtful.—*Pres.*, Rev. W. Perkins & Co., Rev. J. Hornabrook.

Various distinct bodies of Methodists have been formed, the most important being—

1. *The Primitive Methodists*, who sprang up in Staffordshire, in 1810, under the leadership of Hugh Bourne and William Clowes. Owing to the excesses attending certain outdoor services called "camp meetings" the Wesleyan Conference prohibited the continuance of the practice. Bourne and Clowes refused to comply with this decision, and were in consequence expelled. They and their sympathisers banded together in a new body, with enlarged powers for the laity. Next to the Wesleysans they are the most numerous of

all the denominations which have arisen out of the Methodist movement. — *President*, Sir W. P. Hartley.

2. *The Methodist New Connexion*, which was formed in 1797 by the Rev. Alexander Kilham, one of the early itinerating Wesleyan preachers. He demanded that the members of the societies, and not the Conference, should be constituted the source of all power in Methodism; and that the Conference should consist of lay as well as ministerial members, all of whom should be elected by the members of the various societies as their delegates. He was expelled by the Conference and at once founded a new community.

3. *The Bible Christians*, founded in 1815 by William O'Bryan, a Wesleyan lay preacher in Cornwall. They exist principally in the West of England.

4. *The United Methodist Free Churches*, which are an amalgamation of three different secessions—the Protestant Methodist, formed in 1828; the Wesleyan-Methodist Association, which sprang out of a controversy in 1834, concerning the training of ministers; and the Wesleyan Reform Association, founded in 1849, during a great agitation. A strong opposition to leading Wesleyan officials was organised, which found expression in the Conference debates, but more strongly in anonymous pamphlets, on suspicion of being the authors and circulators of which three ministers were expelled.

They found so many sympathisers that over 100,000 members seceded to found a new denomination.

United Methodist Church.—The three latter denominations—the Methodist New Connexion, the Bible Christians, and the United Methodist Free Churches—secured an Act of Parliament in 1907 to authorise their union into one denomination, to be called the United Methodist Church, and to provide for the government of the Church by a Conference consisting of an equal number of ministers and laymen, elected by districts. The act of union took place in London on September 17, 1907, when the first united Conference was held. About 700 delegates were present. A deed was adopted and signed, declaring the terms of union, defining the constitution and doctrinal tenets, and containing provisions for government and discipline. A fund of 100,000 guineas has been raised to commemorate the union.—*President*, Rev. W. B. Lark; *Secretary*, Rev. J. Baxter.

Finances.—The *Wesleyans* raised in 1907–1908 £209,107 to sustain their very extensive missionary operations. At the same time their Home missionary income was £39,882; and £13,495 was expended for the training of candidates for the ministry, of whom there are 247 in the four theological colleges. The *Primitive Methodists* raised £48,813 for new chapels, and the *United Methodist Church* £12,333 for their missions.

The number of Members is for the United Kingdom; of Chapel and Scholars, Great Britain only.	Ministers	Lay Preachers.	Members	On Pro- bation.	Chapels.	Sunday Scholars.
Wesleyan Methodists	2,700	20,447	520,108	30,291	8,606	987,953
Primitive Methodists	1,178	16,158	212,168	...	4,484	465,531
United Methodist Church	843	5,540	148,072	9,547	2,362	374,057
Independent Methodists (1888)	424	8,686	251	145	27,219
Wesleyan Reformers	21	520	7,904	462	195	27,754

Other Religious Denominations.

THE INDEPENDENTS, or CONGREGATIONALISTS, in England come next to the Methodists; they are the most ancient community of Dissenters. They maintain that each church is its own ruler, and thus dispense with both episcopacy and presbyteries. They first appeared in the time of Elizabeth, under whom they were very harshly treated; in consequence great numbers repaired to North America; but their principles triumphed under the Commonwealth. In 1831 the majority of their churches were formed into the Congregational Union of England and Wales, incorporated in 1902. There are 51 county and other Associations in England and Wales, with 4,652 churches and preaching stations containing 1,696,738 sittings; the number of ministers in the British Isles is 3,198. Of these 237 are temporarily without pastoral charge, 85 are engaged in collegiate and tutorial duties, 43 are occupied in secretarial work, and 413 by reason of age or ill-health have retired from pastoral duty. *Chairman of the Congregational Union of England and Wales, 1909–10*, Rev. J. D. Jones, B.D. *Secretary*, Rev. Richard J. Wells. *Office*, Memorial Hall, Farringdon Street.

The *Countess of Huntingdon's Connexion*, with 44 chapels and mission stations, is governed by nine trustees assisted by an annual conference of ministers and delegates. *Sec.*, E. Dolby Shelton. *Office*, 38 Eldon Street House, London, E.C.

THE BAPTISTS are, in all respects but one, similar to the Independents; they have the same form of Church government, and differ but in

one point of practice—viz., the Baptism by immersion of believers only. Like the Congregationalists, they are for the most part grouped in Associations of churches, and the majority of these belong to the Baptist Union, which was formed in 1813. In the British Isles there were, in 1908, 4,124 chapels and 2,078 pastors. The members numbered 424,008. Sunday-school teachers 58,687, and Sunday scholars 576,344. In the U.S. they form one of the most numerous religious bodies, the "members" alone numbering over 6,000,000. Their missionaries are employed in India, Ceylon, China, Palestine, the West Indies, Africa, Brittany, and Italy. *Office*, Baptist Church House, Southampton Row, London, W.C.

THE WELSH CALVINISTIC METHODIST CONNEXION is the only Church of purely Welsh origin, and embraces a very large section of the Welsh-speaking population. The form of Church government is Presbyterian, and the Church is in federation with the United Free Church of Scotland and with the Presbyterian Church of England, &c. At the present time the body numbers—churches, 1,448; chapels and places of worship, 1,666; ministers and preachers, 1,304; deacons, 6,376; communicants, 185,224; on probation, 2,410; Sunday-school teachers, 28,392; scholars and teachers, 217,645; number belonging to the congregations (including communicants), 340,734. A sum amounting to £296,108 was collected for various religious purposes in 1908. One of the features of the Welsh churches is the

Sunday-school, which is attended by adults as well as children; the vernacular is the language generally used in these schools. There are 327 English congregations with 27,540 communicants; all the rest are Welsh. *Moderator of General Assembly, 1909-1910*, Rev. Francis Jones, Abergele. *Secs.*, Rev. R. J. Rees, M.A., Aberystwyth, and J. Gwynne Davies, Barmouth. *Statistical Secs.*, Rev. T. J. Morgan, Garm, near Aberystwyth, and Rev. E. Jones Evans, Walton, Liverpool.

The SALVATION ARMY is one of the most recent religious denominations, and one of the most successful. In Sept., 1908, the number of *Officers, Captains and Empties* was 21,186, of *Corps and Outposts* 8,224, *Local Officers* 52,789. The number of countries occupied was 53, and of languages used 28. Connected with the Salvation Army are numerous philanthropic institutions, including 118 Rescue Homes for Fallen Women, 139 Suna Posts, 17 Prison-Gate Homes, 207 Shelters and Cheap Food Depots for the Homeless, 130 Workshops and Factories, 60 Labour Bureaux, 18 Farms, &c. GENERAL, William Booth.

MINOR RELIGIOUS DENOMINATIONS.—The chief are the Unitarians, with about 350 ministers, 345 chapels, and other places of worship. The Society of Friends, which consists of 19,093 members in Great Britain and Australasia, and 2,467 in Ireland, has 399 recorded ministers, including over 150 women; their places of worship, in

1908, numbered 421. The Friends support their own poor. *Central Office for Great Britain*, 12 Bishopsgate St. Without, E.C. Ireland has a separate organization, with *Office*, 6 Ennstace Street, Dublin. The Churches of Christ have 12,277 members and 186 churches in the British Isles, with 159 Sunday Schools, 1,719 teachers and 16,811 scholars. The Moravians (*Offices*, 32 Fetter Lane, E.C.) have about 60 congregations and preaching stations. The Catholic Apostolic Church have above 80 churches; the New Church (Swedenborgians), 75 societies, with 1,714 registered members; the Latter-Day Saints (Mormons) have 82 churches. Among the inhabitants of the United Kingdom are about 230,000 Jews, mainly in London and other large towns, who possess 200 synagogues, with about 200 ministers and readers (*Chief Rabbi*, Dr. Hermann Adler, C.V.O., Chief Rabbi's Office, Finsbury Square, E.C.). The Jews support their own poor, and raise about £150,000 annually for religious and benevolent purposes. Their number throughout the world is computed at eleven millions. The Brethren, or Plymouth Brethren, have 23 places of worship in London and the suburbs. The Greeks have churches in London, Manchester, and Liverpool. The Armenians have churches in London and Manchester; the French, Dutch, Swedes, and Swiss in London, Norwich, and Canterbury; and a mosque has been opened for Moslems.

The Roman Catholic Church.

IN England there are 1 Archbishop and 15 Episcopal Sees; in Scotland 2 Archbishop and 4 Episcopal Sees; in Ireland 4 Archbishop and 23 Episcopal Sees. In the British Empire there are 30 Archbishop and 108 Episcopal Sees, with 34 Vicariates and 13 Prefectures Apostolic, as follows:—

THE UNIVERSITY OF LONDON, South Kensington, S.W. 1836 and 1900.

THE University was reconstituted in 1900, and has now an "Academic" Department for the organisation and control of higher education in its various constituent "Schools" and other Institutions throughout London, as well as an "External" Department for the continuation of its old functions of examining and conferring degrees upon students throughout the country and in all parts of the Empire.

Number entered by matriculation or otherwise in 1908-9, 3,886. Internal students at present time, 3,987.

Visitor, H.M. the King in Council.

Chancellor, Rt. Hon. Earl of Rosebery, K.G., K.T., D.C.L., LL.D., F.R.S.

Vice-Chancellor, Prof. M. J. M. Hill, Sc.D., F.R.S.
Chairman of Convocation, Sir Edward Henry Busk, LL.B.

Principal, Henry Alexander Miers, D.Sc., F.R.S.

Registrars: (Academic Council) P. J. Hartog, B.Sc.; (External Council) A. Milnes, M.A.; (University Extension) R. D. Roberts, D.Sc.

Secretary to the Senate, P. M. Wallace, M.A.

Sec. to Finance Committee, W. K. Hill, B.A.

Sup. of Examinations, W. H. Sampson, B.A.

Clerk of Committees, C. F. Trener, D.Sc.

Goldsmiths' Librarian, R. A. Rye.

Clerk of Convocation, H. E. Allen, LL.B.

Esquire Bedell (vacant).

Accountant, E. Brewer.

Representative in Parliament, Sir Philip Magnus, B.Sc.

Representative on General Medical Council, Frederick Taylor, M.D.

THE SENATE.

The Chancellor, The Vice-Chancellor, The Chairman of Convocation. *By the Crown*, Sir Francis Mowatt, Hon. W. P. Reeves, Sir Henry Roscoe, Sir John Wolfe-Barry. *By Convocation—(Dignity)*, Rev. J. A. Douglas; (Arts), R. C. B. Kerin, Prof. S. L. Loney, Dr. T. L. Mears, Lord Justice Fletcher Moulton, Sir Albert Rollet; (Laws), The Master of the Rolls (Sir Herbert Cozens-Hardy); (Music), C. B. Edgar; (Medicine), Prof. Sir Thomas Barlow, Dr. E. G. G. Little; (Science), Dr. C. W. Kinmins, Sir Philip Magnus, Sir Walter Palmer, Dr. J. Wade, Dr. R. M. Wahnsley, Dr. S. R. Wells. *By Royal College of Physicians*, Sir William Alchinn, Dr. F. Taylor. *By Royal College of Surgeons*, H. H. Clutton, A. P. Gould. *Representing University College*, Dr. T. Collins, Cyril Jackson. *By City and Guilds of London Institute*, Lt.-Gen. J. W. Laurie, C.B. *By the Faculties—(Theology)*, Rev. Prof. W. H. Bennett; (Arts), Rev. Prof. A. Caldecott, Miss B. Edgell, Prof. E. A. Gardner, Prof. M. J. M. Hill; (Laws), C. V. Barrington; (Music), Prof. Sir Frederick Bridge; (Medicine), Dr. H. A. Caley,

L. E. Hill, Prof. E. H. Starling; (Science), Prof. A. W. Crossley, J. L. S. Hutton, Prof. J. M. Thomson, Dr. A. D. Waller; (Engineering), Prof. J. D. Cormack; (Economics), Graham Wallis.

ORGANISATION OF TEACHING.

The Teaching of the University is organised under three categories:—(1) That conducted by the University itself; (2) that conducted by the several "Schools of the University"; (3) that conducted at the other Institutions at which there are "Recognised Teachers of the University."

The University.

On January 1, 1907, University College, which was by the Statutes of 1900 made a "School of the University" in the Faculties of Arts, Laws, Medicine, Science, Engineering, and Economics, was transferred to the University, of which it now forms an integral part. Matriculated students working at the College in any of these Faculties are "Internal Students of the University." Other Institutions maintained directly by the University are the Physiological Laboratory in the University buildings at South Kensington, and Goldsmiths' College at New Cross.

UNIVERSITY COLLEGE, Gower Street, W.C.

(1826).

Chairman, The Rt. Hon. Lord Reay, G.C.S.I., LL.D.
Treasurer, Sir Felix Schuster, Bart.

Promot, T. Gregory Foster, Ph.D.
Lady Superintendent of Women Students, Rosa Morison.

Librarian, R. W. Chambers, M.A.
Secretary, Walter W. Seton, M.A.

GOLDSMITHS' COLLEGE, New Cross, S.E.

Warden, William Loring, M.A.
Principal of Day Training Dept., The Warden.
Vice-Principals, do., T. Rayment, M.A.; Miss Caroline Gravson, B.A.

PROFESSORS AND OTHER TEACHERS.

The Teaching Staff of the University is organised under two categories:—(1) "Appointed Teachers," i.e., such as have been appointed by the University with the express designation of "Appointed Teachers"; (2) "Recognised Teachers," i.e., such as have been appointed either by the University itself or by one of its "Schools" or by one of the other Institutions at which instruction is given under its auspices, and have been recognised by the Senate as conducting work of University standard.

APPOINTED TEACHERS.

Professors.

Anatomy, G. D. Thane, LL.D.
Applied Mathematics (Goldsmith), Karl Pearson, M.A., F.R.S.
Archæology (Yates), E. A. Gardner, M.A.
Architecture, F. M. Simpson, F.R.I.B.A.
Botany (Quain), F. W. Oliver, D.Sc., F.R.S.
Chemistry, General, Sir William Ramsay, K.C.B., LL.D., F.R.S.
Do., Organic, J. Norman Collie, LL.D., F.R.S.
Comparative Law (Quain), Sir John Macdonell, C.B., LL.D.
Comparative Philology, J. P. Postgate, Litt.D.
Education, John Adams, M.A.

Egyptology (Edwards), W. M. Flinders Petrie, D.C.L., F.R.S.
Electrical Engineering (Pender), J. A. Fleming, D.Sc., F.R.S.
Engineering, D. S. Capper, M.A.; W. E. Dalby, M.A.
English History, A. F. Pollard, M.A.
English Lang. and Lit. (Quain), W. P. Ker, LL.D.
French & Romance Philology (Fielden), L. M. Brandin, Ph.D.
Geology (Vates-Goldsmid), E. J. Garwood, M.A.
 German, R. C. Prietsch, Ph.D.; J. G. Robertson, Ph.D.
Greek, J. A. Platt, M.A.
Hygiene (Chadwick), H. R. Kenwood, C.M.
Latin, A. E. Housman, M.A.
Mathematics (Astor), M. J. M. Hill, Sc.D., F.R.S.
Mechanical Engineering, J. D. Cormack, B.Sc.
Music (King Edward), Sir Frederick Bridge, M.V.O., Mus.Doc.
Pharmacology, A. R. Cushny, M.D., F.R.S.
Philosophy (Grote), Carverth Read, M.A.
Physics (Quain), F. T. Trouton, D.Sc., F.R.S.
Physiology (Jodrell), E. H. Starling, M.D., F.R.S.
Political Economy, Edwin Cannan, LL.D.
Protozoology, E. A. Minchin, M.A.
Sociology (Martin White), L. T. Hobhouse, M.A.; E. A. Westernmark, Ph.D.
Zoology & Comparative Anatomy (Jodrell), J. P. Hill, D.Sc.

Director of the Physiological Laboratory, A. D. Waller, M.D., F.R.S.

Readers.

Ancient History, M. O. B. Caspari, M.A.
Economic History, Mrs. Knowles, Litt.D.
Experimental Psychology, C. Spearman, Ph.D.
Foreign Trade, A. J. Sargent, M.A.
Geography, H. J. Mackinder, M.A.
 German, H. G. Atkins, M.A.; W. Perrett, Ph.D.; J. Steppat, Ph.D.
Greek, J. M. MacGregor, M.A.
Meteorology, W. N. Shaw, Sc.D., F.R.S.
Paleography & Economic History, H. Hall, F.S.A.
Statistics, A. L. Bowley, M.A.
Tibetan Language, F. W. Thomas, M.A.

RECOGNISED TEACHERS.

The number of "Recognised Teachers" in the several Faculties is as follows:—

Theology, 20; *Arts*, 150; *Laws*, 16; *Music*, 22; *Medicine*, 352; *Science*, 207; *Engineering*, 60; *Economics*, 15. There is also a number of "Temporarily Recognised Teachers," who deliver Special Lectures in *Physiology*, *Botany*, *Zoology*, *Geology*, and *Sociology*, under the direct control of the University.

DEANS OF THE FACULTIES, 1908-10.

Theology, Rev. Prof. Albert William Greenup, D.D.
Arts, Prof. Israel Gollancz, Litt.D.
Laws, William Nembhard Hibbert, LL.D.
Music, Charles William Pearce, Mus. Doc.
Medicine, Prof. Sidney Harris Cox Martin, M.D., F.R.S.
Science, Prof. John Millar Thomson, LL.D., F.R.S.
Engineering, Prof. William Ernest Dalby, M.A.
Economics, Arthur Lyon Bowley, M.A.

SCHOOLS OF THE UNIVERSITY.

Faculties of Theology, Arts, Laws, Medicine, Science, Engineering, and Economics:—

King's College, Strand, W.C., 1828.

Principal of College, Rev. A. C. Headlam, D.D.
Vice-Principal, J. M. Thomson, LL.D., F.R.S.
Vice-Principal, Ladies' Dept., Miss H. Oakeley, M.A.
Secretary, Walter Smith.
Librarian, F. W. Walton, M.A.

Theology:—

St. John's Hall, Highbury (The London College of Divinity, Church of England).

Principal, Rev. A. W. Greenup, D.D.

Hackney College, Hampstead (Congregational).

Principal, Rev. F. T. Forsyth, D.D.

New College, Hampstead (Congregational).

Principal, Rev. A. E. Garvie, D.D.

Regent's Park College, N.W. (Baptist).

Principal, Rev. G. P. Gould, M.A.

Wesleyan College, Richmond (Wesl. Methodist).

Governor, Rev. Thomas H. Barratt, B.A.

Arts, Science, and Engineering:—

The East London College, Mile End Road, E.

Principal, John L. S. Hatton, M.A.

Registrar, T. C. Hedson.

Arts and Science:—

Royal Holloway College, Englefield Green.

Principal, Miss Ellen C. Higgins, B.A.

Secretary, Miss A. Martin Leake.

Bedford College for Women, York Place, Baker Street, W.

Principal, Miss M. J. Tuke, M.A.

Secretary of Council, Miss E. T. McKnight, M.A.

Arts:—

Westfield College, Hampstead, N.W.

Resident Mistress, Miss C. L. Maynard.

Secretary, Miss S. M. Smea.

Medicine:—

The Medical Schools of certain Hospitals, &c. (see pp. 279-280.)

Science and Engineering:—

Imperial College of Science and Technology,

South Kensington, S.W.

Reader, Henry Taylor Bovey, LL.D., F.R.S.

Secretary, Alexander Gow, B.Sc.

Economics and Political Science:—

London School of Economics and Political Science,

Clare Market, Kingsway, W.C.

President, Lord Rothschild.

Chairman, Sidney Webb, LL.B.

Director, Hon. W. P. Reeves.

Science—In Agriculture only:—

South-Eastern Agricultural College, Wye, Kent.

(Under the County Councils of Kent and Surrey.)

Chairman, Rt. Hon. Lord Ashcombe.

Clerk to the Governors, J. T. Welldon, B.A. (Ashford).

Principal, M. J. R. Dunstan, M.A., F.R.S.E.

Vice-Principal, F. V. Theobald, M.A.

Secretary & Bursar, H. W. Kersey.

Engineering:—

Central Technical College, Exhibition Road, S.W.

Dean, Prof. W. E. Dalby, B.Sc.

Sec., Board of Studies, A. L. Soper.

Registrar, John Jones.

THE UNIVERSITY OF DURHAM. 1831.

TERMS (1910).—*Epiph.*, Jan. 14 to March 15.

Easter, April 19 to July 2.

Chancellor, Viscount Morley of Blackburn, O.M.
Vice-Chancellor, Alfred Hopkinson, K.C., LL.D.
Treasurer, E. J. Broadfield, LL.D.
Registrar, Edward Fiddes, M.A.
Bursar, Sydney Chaffers, M.A.
Tutor, Women Students, Phoebe Sheavyn, D.Lit.
Clerk of Convocation, Percy Raby, LL.B.

Faculty of Arts.

Greek, Ronald M. Burrows, M.A.
Hellenistic Greek, J. H. Moulton, D.Lit.
Latin, R. S. Conway, Litt.D.
English Lit. & Language, C. H. Herford, Litt.D.
French, L. E. Kastner, M.A.
German, Arwid Johansson, M.A.
Semitic Languages, Hope W. Hogg, M.A.
Chinese, E. H. Parker, M.A.
Mediæval & Modern History, T. F. Tout, M.A.
Ancient & Mediæval History, J. Tait, M.A.
Philosophy, S. Alexander, LL.D., Dean.
Education, J. J. Findlay, Ph.D.; M. E. Sadler, LL.D.
Political Economy, S. J. Chapman, M.A.
Architecture, S. H. Capper, M.A.

Faculty of Science.

Mathematics, Horace Lamb, LL.D., F.R.S.
Physics, Ernest Rutherford, D.Sc., F.R.S.; Arthur
Schuster, Sc.D., F.R.S.
Engineering, J. E. Petavel, D.Sc., F.R.S.
Chemistry, H. B. Dixon, Ph.D., F.R.S.; W. H.
Perkin, Ph.D., F.R.S.
Metallurgy, H. C. H. Carpenter, Ph.D.
Zoology, S. J. Hickson, D.Sc., F.R.S.
Botany, F. E. Weiss, D.Sc., Dean.
Do., Cryptogamæ, W. H. Lang, D.Sc.
Geology, Sir T. H. Holland, K.C.I.E., F.R.S.; W.
Boyd Dawkins, D.Sc., F.R.S.

Faculty of Law.

Professors, A. Hopkinson, K.C., LL.D., W. A.
Copinger, LL.D., Dean, and J. S. Seaton, M.A.

Faculty of Commerce.

Professor, S. J. Chapman, M.A., Dean.

Faculty of Music.

Dean, J. Kendrick Pyne, Mus.Doc.

Faculty of Theology.

Dean, Rev. W. F. Adeney, B.D.
Biblical Criticism, A. S. Peake, M.A.; H. W.
Hogg, M.A.
Comparative Religion, T. W. Rhys Davids, LL.D.

Faculty of Technology.

Dean, J. H. Reynolds, M.Sc.
Mechanical Engineering, J. T. Nicolson, D.Sc.
Electrical Engineering, A. Schwartz, M.Sc. Tech.
Chemistry, E. Knecht, Ph.D.

Faculty of Medicine.

Anatomy, Grafton Elliot Smith, M.D., F.R.S.
Physiology, W. Stirling, M.D., Dean.
Materia Medica, R. E. Wild, M.D.
Comp. Pathology & Bacteriol., A. S. Delépine, M.B.
Pathology, J. Lorrain Smith, M.D., F.R.S.
Medicine, Clinical, Graham Steell, F.R.C.P.
Do., Systematic, George R. Murray, M.D.
Clinical Surgery, F. A. Southam, F.R.C.S.
Systematic Surgery, G. A. Wright, F.R.C.S.
Obstetrics & Gynecology, Sir W. J. Sinclair, M.D.
Forensic Medicine, J. Dixon Mann, M.D.

TRAINING COLLEGE (for Men and Women).
The Professors of Education (see above).
Master of Method, H. T. Mark, M.A.
Misses of Method, Barbara Foxley, M.A.

THE UNIVERSITY OF BIRMINGHAM.
Birmingham, 1900. (£2,000.)

TERMS (1909).—Oct. 4 to Dec. 18.
" (1910).—Jan. 10 to Mar. 19; Apr. 18 to July 2.
Chancellor, Rt. Hon. Joseph Chamberlain, M.P.
Vice-Chancellor, C. G. Beale, M.A.
Principal, Sir Oliver Lodge, D.Sc., F.R.S.
Vice-Principal & Registrar, Robert S. Heath, D.Sc.
Secretary, George H. Morley.

PROFESSORS.

Faculties of Science, Arts, and Commerce.
Mathematics, R. S. Heath, D.Sc.
Physics, J. H. Poynting, Sc.D., F.R.S.
Chemistry, P. F. Frankland, Ph.D., F.R.S.
Zoology, F. W. Gamble, D.Sc., F.R.S.
Botany, G. S. West, M.A., D.Sc.
Geology & Photography, C. Lapworth, LL.D., F.R.S.
Mechanical Engineering, F. W. Burstall, M.A.
Civil Engineering, S. M. Dixon, M.A.
Electrical Engineering, Gisbert Kapp, M.Sc.
Breeding, Adrian J. Brown, M.Sc.
Metallurgy, T. Turner, M.Sc.
Mining, J. Cadman, D.Sc.
Commerce, W. J. Ashley, M.Com.
Accounting, S. S. Dawson, F.C.A.
Finance, A. W. Kirkaldy, M.Com.
Greek and Latin, E. A. Sonnenschein, D.Litt.
English Lang. & Lit., E. de Selincourt, D.Litt.
Mental and Moral Philosophy, J. H. Muirhead, LL.D.
French, H. L. Chatekain, D.Sc., Litt.
German, Karl Wichmann, Ph.D.
History, C. R. Beazley, M.A., D.Litt.
Education, Alfred Hughes, M.A.
Music, Granville Bantock, M.A.

Faculty of Medicine.

Medicine, R. Saundby, M.B.; A. H. Carter, M.D.
Surgery, G. Barling, F.R.C.S.; Jordan Lloyd, M.D.
Anatomy, P. Thompson, M.D.
Physiology, F. W. Wace Carlier, M.D.
Elementary Biology, F. W. Gamble, D.Sc., F.R.S.
Therapeutics (vacant).
Forensic Medicine, J. T. J. Morrison, F.R.C.S.
Hygiene and Public Health, A. Postock Hill, M.D.
Midwifery, Edward Malins, M.D.
Gynaecology, J. W. Taylor, F.R.C.S.
Pathology, R. F. C. Leith, F.R.C.P.
Lunacy & Mental Dis., E. B. Whitcombe, M.D.
Ophthalmology, Priestley Smith, F.R.C.S.
Dental School, J. Humphreys, M.D.S. (Hon. Sec.).

DAY TRAINING COLLEGES.

Head Mistress (women), Miss A. H. Joyce, B.A.
Master of Method (men), Frank Roscoe.

THE UNIVERSITY OF LIVERPOOL.

Liverpool, 1903. (£2,000.)

TERMS (1909).—Oct. 5 to Dec. 17.
" (1910).—Jan. 6 to March 19; April 26 to July 9.

Chancellor, The Earl of Derby, G.C.V.O., C.B.
Vice-Chancellor, A. W. W. Dale, LL.D.
Registrar, P. Hebbelthwaite, M.A.
Librarian, John Sampson, D.Litt.

PROFESSORS.

Faculties of Arts, Science, Medicine, Law and Engineering.
Greek, J. L. Myers, M.A.
Latin, J. P. Postgate, F.B.A.
Classical Literature, A. W. W. Dale, LL.D.

French, C. Bonnier, Ph.D.
Spanish, J. Fitzmaurice Kelly, F.B.A.
Teutonic Languages, Kuno Meyer, Ph.D.
Celtic, Kuno Meyer, Ph.D.
English Lang. & Philol., H. C. Wyld, B.Litt.
English Literature, Oliver Elton, M.A.
Economic Science, E. C. K. Gonner, M.A.
History, J. M. Mackay, LL.D.
Modern History, Ramsay Muir, M.A.
Russian History, Language and Literature, Bernard Pares, M.A.
Philosophy, John MacCunn, LL.D.
Education, E. T. Campagnac, M.A.
Classical Archaeology, R. C. Bosanquet, M.A.
Methods and Practice of Archaeology, J. Garstang, B.Litt.
Egyptian Archaeology, Percy E. Newberry, M.A.
Medieval Archaeology, F. P. Barnard, M.A.
Social Anthropology, J. G. Frazer, D.C.L.
Law, G. H. Eimmott, LL.M. (Dean, Law).
Commercial Law, W. J. Sparrow, LL.D.
Architecture, C. H. Reilly, M.A.
Physiology, C. S. Sherrington, M.D., F.R.S.
Mathematics, F. S. Carey, M.A.
Physics, L. R. Wilberforce, M.A.
Chemistry, James Campbell Brown, D.Sc.
Physical Chemistry, F. G. Donnan, Ph.D.
Natural History, William A. Herdman, D.Sc., F.R.S.
Botany, R. J. H. Gibson, M.A. (Dean, Science).
Engineering, W. H. Watkinson, M.Eng.
Civil Engineering, S. W. Perrott, M.A.I.
Electrical Engineering, E. W. Marchant, D.Sc.
Anatomy, A. Melville Paterson, M.D.
Medicine, T. Robinson Glynn, M.D.
Surgery, Rushton Parker, F.R.C.S.
Pathology, Sir Robert Boyce, M.B., F.R.S.
Midwifery and Gynaecology, H. Briggs, M.D.
Therapeutics, J. Hill Abram, M.D.
Hygiene, E. W. Hope, D.Sc.
Tropical Med., Maj. Ronald Ross, C.B., F.R.S.
Bio-Chemistry, B. Moore, D.Sc.
Comparative Pathology, H. E. Annett, M.D.
Dean, Arts, A. Mair, M.A.
Dean, Medicine, K. W. Monsarrat, F.R.C.S.
Dean, Engineering, J. Wenys Anderson, M.Eng.

HALL OF RESIDENCE FOR WOMEN.

Warden, Miss G. M. Butler, M.A.
DAY TRAINING COLLEGE (Men and Women).
Principal, J. H. Gettins, B.A.
Mistress of Method, Miss S. Melhuish, M.A.
Warden, F. T. Sharpe, M.A.

THE UNIVERSITY OF LEEDS.

Leeds, 1904. (£2,000.)

TERMS (1909).—Oct. 4 to Dec. 22.
" (1910).—Jan. 12 to March 23; April 20 to July 2.

Chancellor (vacant).
Vice-Chancellor, Sir Nathan Bodington, LL.D.
Registrar, W. F. Husband, LL.B.

PROFESSORS.

Faculties of Arts (including Commerce & Law), Science & Technology.
Classics, W. Rhys Roberts, Litt.D.; B. M. Connal, M.A. (Dean, Arts).
English Lang. and Lit., C. E. Vaughan, M.A.
French, Paul Barbier fils, M.A.
German, A. W. Schüddekopf, Ph.D.
History, Arthur J. Grant, M.A.
Economics, D. H. Macgregor, M.A.
Education, J. Welton, M.A.
Law, W. R. Phillips, LL.M.
Mathematics, L. J. Rogers, M.A.
Physics, W. H. Bragg, M.A., F.R.S.
Chemistry, A. Smithells, B.Sc., F.R.S. (Dean, Science).

Organic Chemistry, J. B. Cohen, B.Sc., Ph.D.
Zoology, W. Garstang, M.A., D.Sc.
Botany, V. H. Blackman, M.A., Sc.D.
Geology, P. F. Kendall, M.Sc.
Engineering, J. Goodman, M.Sc.
Mining, G. R. Thompson, B.Sc. (*Dean, Technology*).
Textile Industries, Roberts Beaumont, M.Sc.
Dyeing, A. G. Green, M.Sc.
Leather Industries, H. R. Procter, M.Sc.
Fuel & Metallurgy, W. A. Bone, D.Sc., F.R.S.
Agriculture, R. S. Seton, B.Sc.

School of Medicine.

Anatomy, T. Wardrop Griffith, M.D.
Physiology and Histology, De Burgh Birch, M.D.
Pathology, A. S. Grünbaum, M.D., F.R.C.P. (*Dean, Medicine*).
Medicine, A. G. Barrs, M.D.
Surgery (vacant).
Obstetrics, J. B. Hellier, M.D.
Therapeutics, Pharmacy, and Materia Medica, H. J. Campbell, M.D.
Public Health, J. S. Cameron, M.D.
Forensic Medicine, F. W. Eurich, M.D.
Mental Diseases, W. Bevan-Lewis, M.Sc., L.R.C.P., M.R.C.S.

SHEFFIELD UNIVERSITY. 1905. (£2,000.)
TERMS (1905).—Oct. 6 to Dec. 18.
 " (1910).—Jan. 2 to Mar. 19; Apr. 13 to June 30.

Chancellor, The Duke of Norfolk, E.M., K.G., Litt.D.
Vice-Chancellor, Sir Charles Eliot, K.C.M.G., LL.D.
Treasurer, H. K. Stephenson, J.P.
Registrar, W. M. Gibbons, M.A.
Librarian, T. Loveday, M.A.
Tutor for Women Students, Miss M. J. Sorby.

PROFESSORS.

Mathematics, A. H. Leahy, M.A. (*Dean, Pure Science*).
Physics, W. M. Hicks, Sc.D., F.R.S.
Chemistry, W. Palmer Wynne, D.Sc., F.R.S.
Zoology and Biology, Alfred Denny, M.Sc.
Geography, R. N. Rudmose Brown, D.Sc.
English Lang. & Lit., G. C. Moore Smith, Litt.D.
History, H. W. Appleton, M.A.
Latin, W. C. Summers, M.A. (*Dean, Arts*).
French, A. T. Baker, Ph.D.
German, Julius Freund, Ph.D.
Education, J. A. Green, M.A.
Law, W. F. Trotter, LL.M. (*Dean, Law*).
Engineering, W. Ripper, D.Eng. (*Dean, Applied Science*).
Mining Engineering, F. W. Hardwick, M.A.
Applied Chemistry, L. T. O'Shea, M.Sc.
Metallurgy, J. O. Arnold, D.Met.; A. McWilliam, M. Met.
Anatomy, C. J. Patten, M.D.
Physiology, J. S. Macdonald, B.A.
Medicine, W. Dyson, M.D.; D. Burgess, F.R.C.P.
Materia Medica, &c., W. T. Cocking, M.D.
Surgery, R. J. Pye-Smith, F.R.C.S.
Pathology, J. M. Beattie, M.D. (*Dean, Medicine*).
Midwifery, R. Favell, Ch.M.
Public Health, R. P. Williams, M.D.

TRAINING COLLEGE.

Master of Method, C. Birchenough, M.A.
Mistress of Method, Katherine L. Johnston, B.A.

UNIVERSITY OF BRISTOL. 1909. (£2,000.)
Chancellor, Henry Overton Wills, J.P.
Vice-Chancellor, Sir Isambard Owen, D.C.L.
Treasurer, George A. Wills, J.P.
Registrar, James Rafter.

PROFESSORS.

Faculty of Arts.

Classics, Francis Brooks, M.A.
English Language and Lit., R. P. Cowl, M.A.
Modern History, G. H. Leonard, M.A.
Public Administration and Economics, H. B. Lees Smith, M.A.
Psychology, C. Lloyd Morgan, LL.D., F.R.S., *Dean*.
Mathematics, F. R. Barrell, M.A., B.Sc.

Faculty of Science.

Mathematics, F. R. Barrell, B.Sc., *Dean*.
Experimental Physics, A. P. Chattock, M.I.E.E.
Chemistry, Francis Francis, D.Sc.
Geology and Zoology, S. H. Reynolds, M.A.

Faculty of Medicine.

Medicine, F. H. Edgeworth, M.D.; J. Michell Clarke, M.D.
Surgery, Charles A. Morton, F.R.C.S.; James Swain, F.R.C.S.
Anatomy, Edward Fawcett, M.D., *Dean*.
Physiology, A. F. Stanley Kent, M.A.
Midwifery, Walter C. Swayne, M.D.
Pathology and Morbid Anatomy, I. Walker Hall, M.D.

DAY TRAINING COLLEGES.

Master of Method, T. S. Foster, M.A.
Mistress of Method, Miss M. F. Pease.
Lady Supt. (Women's Hostel), Miss A. Cook.

Tutor to the Women Students, Miss M. C. Staveley, M.A.

MERCHANT VENTURERS' TECHNICAL COLLEGE, Bristol.

Faculty of Engineering.
Applied Chemistry, Julius Wertheimer, B.Sc., *Dean*.
Mathematics, Edmund S. Boulton, M.A.
Civil Engineering, R. M. Ferrier, M.Sc.
Mechanical and Mining Engineering, John Munro, A.R.C.S.
Electrical Engineering, David Robertson, B.Sc.
Motor-Car Engineering, William Morgan, B.Sc.

ENGLISH UNIVERSITY COLLEGES.

EXETER—ROYAL ALBERT MEMORIAL, UNIVERSITY COLLEGE.

Principal, A. W. Clayden, M.A.
Sec. and Registrar, A. Woodbridge.
DAY TRAINING COLLEGE (Men and Women).—
Lady Tutor, Miss A. J. Walker, M.A.

NEWCASTLE - UPON - TYNE — ARMSTRONG COLLEGE. (See University of Durham.)

NEWCASTLE-UPON-TYNE—RUTHERFORD COLLEGE. 1878.

Principal, J. B. Gaunt, B.Sc.
Registrar, R. Thomson.

NOTTINGHAM—UNIVERSITY COLL. 1880.

Principal, Rev. J. E. Symes, M.A.
Registrar, P. H. Stevenson, F.C.I.S.
DAY TRAINING COLLEGE. — Normal Master,
 Prof. Henderson, B.A.; *Normal Mistress*, Miss Bird, L.L.A.

READING—UNIVERSITY COLLEGE. (£3,400.)

Principal, W. M. Childs, M.A.
Registrar, F. H. Wright, M.A.

SOUTHAMPTON—HARTLEY UNIV. COLL.

Principal, S. W. Richardson, D.Sc.
Registrar, D. Kiddle.

Wales.

THE UNIVERSITY OF WALES. 1893.

(£4,000.)

"PRIFYSGOL CYMRU."

Protector, H. M. The King.
Chancellor, H. R. H. The Prince of Wales, K.G.
Vice-Chancellor, Principal Griffiths, D.Sc., F.R.S.
Warden, Guild of Graduates, Prof. C. Morgan.
Treas., Lt.-Gen. Sir J. Hills-Johnes, F.C., G.C.B.
Registrar, J. M. Angus (Cathays Park, Cardiff).
Treas., Guild of Graduates, Edgar Jones, M.A.
Clerk, Guild of Graduates, J. G. Davies, M.A.

I. UNIVERSITY COLLEGE OF WALES—

Aberystwyth (1872). (£8,000.)

Principal, Thomas Francis Roberts, LL.D.
Registrar, J. H. Davies, M.A.
Librarian, J. D. Williams, B.A.

PROFESSORS.

Greek, The Principal; J. W. Marshall, M.A.
Latin, E. Bensly, M.A.
Oriental, German, & Italian Languages, H. Ethé, Ph.D.
English Lang. and Lit., J. W. H. Atkins, M.A.
History, E. Edwards, M.A.; T. S. Roberts, M.A.
Math., Nat. Philos., & Astron., R. W. Genese, M.A.
Applied Mathematics, G. A. Schott, D.Sc.
Logic and Philosophy, J. Brough, LL.D.
Political Science, W. Jenkyn Jones, M.A.
Chemistry, J. J. Sudborough, D.Sc.
Physics, D. Morgan Lewis, M.A.
Zoology and Geology, H. J. Fleure, D.Sc.
Botany, R. H. Yapp, M.A.
Welsh & Comparative Philology, Edw. Anwyl, M.A.
French, André Barbier.
Education, Foster Watson, M.A.
Law, T. Arthur Levi, B.C.L.
Music, David Jenkins, Mus. Bac.
Agriculture, C. Bryner Jones, M.Sc.
Do. (Chemistry), J. J. Griffith, B.Sc.

HALL OF RESIDENCE FOR WOMEN.

Warden, Miss E. A. Fewings.

MEN STUDENTS' HOSTEL.

Warden, Prof. J. W. Marshall, M.A.

II. UNIVERSITY COLLEGE OF NORTH

WALES—Bangor (1884). (£8,000.)

Principal, Sir Harry Reichel, LL.D.
Secretary and Registrar, J. E. Lloyd, M.A.

PROFESSORS.

Constitutional History, The Principal.
History, J. E. Lloyd, M.A.
Greek, T. Hudson Williams, M.A.
Latin, E. V. Arnold, Litt.D.
French, O. H. Fynes-Clinton, M.A.
German, E. L. Milner-Barry, M.A.
English Language & Lit., W. Lewis Jones, M.A.
Semitic Languages, T. Witton Davies, Ph.D.
Logic, Philosophy and Pol. Econ., J. Gibson, M.A.
Mathematics, G. H. Bryan, Sc.D., F.R.S.
Physics, E. T. Jones, D.Sc.
Chemistry, K. J. P. Orton, Ph.D.
Botany, R. W. Phillips, D.Sc.
Welsh, J. Morris Jones, M.A.
Agriculture, T. Winter, M.A.
Zoology, P. J. White, M.B., F.R.S.E.
Education, R. L. Archer, M.A.
Forestry, Fraser Story, F.R.S.E.

HALL OF RESIDENCE FOR WOMEN.

Warden, Miss H. M. M. Lane.

III. UNIVERSITY COLL. OF SOUTH WALES AND MONMOUTHSHIRE—Cardiff (1883).

(£8,000.)

Principal, Ernest Howard Griffiths, Sc.D., F.R.S.
Registrar, J. Anstin Jenkins, B.A.

PROFESSORS.

Greek, G. Norwood, M.A.
Latin, D. A. Slater, M.A.
Logic and Philosophy, J. S. Mackenzie, Litt.D.
English Lang. & Literature, H. Littledale, M.A.
French Lang. & Literature, Paul Barbier.
Education, W. Phillips, M.A.; H. M. Mackenzie, M.A.
Applied Mathematics, R. H. Pinkerton, M.A.
Celtic, Thomas Powell, M.A.
Experimental Philosophy, The Principal.
Physics, A. L. Selby, M.A.
Chemistry, C. M. Thompson, D.Sc.
Engineering, A. C. Elliott, D.Sc.
Zoology, W. N. Parker, Ph.D.
Botany, A. H. Trow, D.Sc.
Geology, W. S. Boulton, D.Sc.
History, H. Bruce, M.A.
Metallurgy, A. A. Read, M.Met.

Faculty of Medicine.

Anatomy, David Hepburn, M.D., F.R.S.E.
Physiology, J. B. Hayercraft, M.D., F.R.S.E.

ABERDARE HALL.

Principal, Miss Kate Hurlbatt.

LAMPETER—ST. DAVID'S COLLEGE.

1827.

Number of Students (1908-9), 125.
Principal & Sen. Bursar, Rev. Ll. J. M. Bebb, D.D.

PROFESSORS.

Theology and Greek, The Principal.
Math. & Phys. Science, A. W. Scott, M.A.
Latin, G. W. Wade, D.D., *Librarian*.
Theology and Hebrew, E. T. Green, M.A., *Censor*.
Welsh, E. L. Thomas, M.A.
English & Philos., H. Walker, LL.D., Jr. *Bursar*.
Theology (Lect.), Rev. C. Cryer, M.A.
Mathematics (Lect.), Rev. B. Davies, M.A.
History (Lect.), Rev. W. W. Longford, M.A.

[Lampeter possesses by Charter the privilege of conferring degrees B.A. and B.D., and is affiliated to Oxford and Cambridge.]

Scotland.

UNIVERSITY OF ST. ANDREWS. 1411.

(£10,800.)

Number of Students (1908-1909), 585.
Winter Session (1909-1910), 6 Oct. to 16 March.
Summer Session (1910), 20 April to 28 June.
Chancellor, Rt. Hon. Lord Balfour of Burleigh, K.T.
Vice-Chancellor, Principal Sir James Donaldson, LL.D.
Rector, Rt. Hon. Lord Avebury, LL.D.
Principal, Sir James Donaldson, LL.D.
Representative in Parliament, Sir J. B. Tuke, D.Sc.
Registrar & Secretary, Andrew Bennett.
Librarian, J. M. Anderson. *Rector*, W. Wilkie.

UNITED COLLEGE OF ST. SALVATOR AND ST. LEONARD.

Principal, Sir James Donaldson, LL.D. £900

PROFESSORS.

Humanity, Wallace M. Lindsay, M.A. £750
Logic & Metaphysics, G. F. Stout, LL.D. 600
Greek, John Burnet, M.A. 750
Mathematics, P. R. Scott Lang, M.A. (*Dean*,
Arts) 750

Moral Philosophy, Alfred E. Taylor, M.A.	£600
Nat. Philos., A. S. Butler, M.A.	750
Natural History, W. C. McIntosh, M.D.	650
Chemistry, James C. Irvine, Ph.D.	650
Education, John Edgar, M.A.	500
Engl. Literature, A. Lawson, M.A.	600
Anatomy, James Musgrave, M.D. (Dean, Science)	566
Physiology, Percy T. Herring, M.D.	425

COLLEGE OF ST. MARY.

Prin., Very Rev. A. Stewart, D.D. (Dean, Theol.).

PROFESSORS.

Primarius Prof. of Divinity, The Principal	£688
Biblical Criticism, Rev. Allan Menzies, D.D.	600
Ecclesiastical Hist., Rev. John Herkless, D.D.	616
Oriental Languages, Rev. D. M. Kay, B.D.	600

UNIVERSITY COLLEGE, DUNDEE (1880).

Principal, John Yule Mackay, LL.D. £764
Secretary, W. Arnot Watterson.

PROFESSORS.

Mathematics, J. E. A. Steggall, M.A.	£524
Natural Philosophy, William Peddie, D.Sc.	530
Chemistry, Hugh Marshall, D.Sc.	577
Natural History, D'Arcy W. Thompson, B.A.	511
Botany (White's), Patrick Geddes, F.R.S.E.	279
Anatomy (Co's), J. Yule Mackay, LL.D. (supra) ..	
Physiology, E. W. Reid, B.A.	
Engin. and Drawing, A. H. Gibson, D.Sc.	537
Pathology, L. R. Sutherland	486
Surgery, D. MacEwan, M.D.	173
Medicine, Alex. M. Stalker	155
Midwifery, Jno. A. C. Kynoch (Dean, Medicine) ..	161
Materna Medicine, Chas. R. Marshall	489

UNIVERSITY OF GLASGOW. 1450.

(£20,880.)

Number of Students (1908-9), 2,699.

TERMS (1909).—11 Oct. to 17 Mar.

" (1910).—12 April to 28 June.

Chancellor, Lord Rosebery, K.G., K.T., LL.D.
Vice-Chancellor, The Principal.
Rector, Rt. Hon. Lord Curzon of Kedleston.
Principal, Sir Donald MacAlister, K.C.B., D.C.L. *£1,100
Representative in Parliament, Sir Henry Craik K.C.B., LL.D.

PROFESSORS.

Humanity, J. S. Phillimore, M.A.	*£1,000
Greek, Gilbert A. Davies, M.A.	*1,000
Civil Engineering & Mechanics, Archibald Barr, D.Sc.	900
Logic & Rhetoric, Robert Latta, D.Ph.	*800
Moral Philosophy, Hy. Jones, LL.D.	*800
Natural Philosophy, A. Gray, LL.D., F.R.S.	*1,000
Mathematics, George A. Gibson, LL.D.	*1,000
English Lang. & Lit., Wm. M. Dixon, Litt. D.	900
History, Dudley J. Medley, M.A. (Dean, Arts)	900
Astronomy, Ludwig Becker, Ph.D.	600
Naval Architecture, J. Harvard Biles, LL.D.	800
Divinity, Rev. H. M. Reid, D.D.	*521
Church History, James Cooper, D.D.	*437
Biblical Criticism, W. Stewart, D.D. (Dean, Theology) ..	558
Hebrew & Semitic Lang., W. B. Stevenson, B.D.	*700
Law, William M. Gloag, B.A.	*800

Conteplaining, James Moir, LL.D.	£600
Materna Medica, R. Stockman, M.D.	700
Chemistry, John Ferguson, LL.D.	1,300
Surgery, Sir William MacEwen, M.D., F.R.S.	800
Practice of Medicine, S. Gemmell, M.D.	*800
Midwifery, Murdoch Cameron, M.D.	700
Anatomy, Thomas H. Bryce, M.D.	*1,200
Zoology, John G. Kerr, M.A.	800
Geology, John W. Gregory, D.Sc., F.R.S. (Dean, Science)	700
Mining, Chas. Latham, M.Inst. M.E.	600
Botany, Frederick O. Bower, D.Sc., F.R.S.	830

Secondary Education.

THE HEAD MASTERS' CONFERENCE (*Secy.*, W. A. Evans, 12 King's Bench Walk, Temple, E.C.).—The object of the Conference is the discussion of educational questions which affect such schools as are in close connection with the Universities of Oxford and Cambridge. The annual meetings are, as a rule, held in December, alternately (a) at some school represented on the Conference, (b) at London or some University town. The admission of schools to the Conference is decided by the committee, and in considering applications the committee has regard to the scheme or other instrument under which the school is administered, the numbers in the school, and the number of resident undergraduates of Oxford and Cambridge educated at the school. As a general rule there should be 100 boys at least in any school represented at the Conference, and about ten resident undergraduates at the Universities who have gone direct from the school. The Universities Joint Committee (consisting of 5 Headmasters, 5 members of the

Hebdomadal Council of Oxford, and 5 members of the Council of the Senate of Cambridge) meets periodically to consider matters of joint interest to the Universities and Public Schools.

THE INCORPORATED ASSOCIATION OF HEAD MASTERS (*Asst. Secy.*, H. Bendall, M.A., 37 Norfolk Street, Strand, W.C.).—The qualification for membership is the holding of the head mastership of a day school for boys, the school being (a) recognised by the Board of Education as Secondary; (b) administered under a definite form of public or corporate control (e.g., Board of Education Scheme); (c) managed by a governing body which has powers both to control the school finances and to appoint and dismiss the head master.

THE SCHOOLMASTERS' ASSOCIATION, IRELAND (*Pres.*, W. G. Connolly, LL.D., Waterford; *Secy.*, H. S. McIntosh, M.A., Belfast) is similar to the H.M.A. in aims and objects.

A LIST OF THE SECONDARY SCHOOLS OF GREAT BRITAIN AND IRELAND, WITH THE NAMES OF THE HEAD MASTERS.

*The * denotes membership of the Head Masters' Conference; the †, of the Incorporated Association of Head Masters.*

ASSOCIATION FOR THE EDUCATION OF WOMEN IN OXFORD.

President, Arthur Sidgwick, M.A.
 Secretaries, Miss Rogers; W. D. Ross, M.A.
 Office, Clarendon Building, Oxford.
 Principal of Society of Oxford Home Students, Mrs. A. H. Johnson, 5 South Parks Rd., Oxford.

THE ASSOCIATION OF HEAD MISTRESSES was founded in 1874 and incorporated in 1896, its objects being to support and protect the status and interests of women engaged in education generally, and secondary education in particular. Head mistresses of Public Secondary Schools with at least 50 pupils are eligible for membership, and those of approved Secondary Schools in the Imperial Dominions are eligible for election as Correspondents. A Conference is held annually in June. *President* (1909-1911), Miss Burstall, M.A., Manchester High School. *Secretary*, Miss R. Young, 92 Victoria Street, Westminster, S.W. Members of the Association are marked § in the following lists.

THE ASSOCIATION OF ASSISTANT MISTRESSES was founded in 1884 and incorporated in 1897, its aims being to improve the status of Assistant Mistresses and to provide a medium for the expression of their views upon educational questions. Two Conferences are held annually, one in London in January and one in summer at some provincial centre. *President*, Miss E. M. Baneroff, Redland High School, Bristol. *Secretary*, Miss E. Thomas, Gordon Square, W.C.

The Bankers' Clearing-House.

THE BANKERS' CLEARING-HOUSE, in Post Office Court, Lombard Street, is the medium through which Bankers obtain the amount of Cheques and Bills in their hands for collection from other Bankers. The amount passing through this channel is enormous. The total for the year ending December 31st, 1908, was £12,120,362,000, a decrease of £60,031,000 as compared with the year 1907. On Stock Exchange days the payments were £1,672,498,000, a decrease on the year 1907 of £149,775,000. The payments on Consols account days for the same period amounted to £645,046,000, an increase of £13,153,000 as compared with 1907, and on the 4ths of the months the payments for 1908 amounted to £456,667,000, a decrease of £35,845,000 as compared with 1907. The establishment is managed by a Committee of Bankers—*Chairman*, The Rt. Hon. Lord Avebury, F.R.S.; *Deputy Chairman*, Sir Felix Schuster, Bart.; *Hon. Sec.*, R. Martin Holland; *Acting Managers*, P. W. Matthews (*Chief Inspector*); A. E. Salt (*Deputy Inspector*).

Joint-Stock Banks.

A list of the principal Joint-Stock Banks doing business in the United Kingdom, with particulars of their Share Capital, reserve fund, highest and lowest price in 1909 (1st January–30th September), and Dividend for last complete year.

DIVIDENDS are paid:—

On Sterling Stocks transferable in the Bank Books—(a) Warrants will be sent by Post—x. To Sole or First Stockholders *without application*, in the absence of any instructions to the contrary.

2. To any Stockholder, Executor, or Administrator, other than the Sole, or First, Stockholder, Executor, or Administrator, or to any Person, Firm, or Company, upon the written Request, in the prescribed form, of all the Stockholders, Executors, or Administrators. (b) Dividends will be paid to any Stockholder, Executor, or Administrator, *personally attending at the Bank*, on his written Request, in the case of a Sole Account, or on the written Request of all the Stockholders, Executors, or Administrators, in the case of a Joint Account. The Request in either case must be in the prescribed form.

On Indian Railway and Thames Conservancy Debenture Stocks, Chinese 5% and 4½% Stocks, Greek 2½% Stock, Japanese 5% Stock, and Corporation of London 2½% Debenture Stock—by transmission of Warrants through the Post to the Stockholders or their Nominees.

On Indian Rupee Promissory Notes and Registered Stock—(a) On personal application at the India Office, Bank of England:—to the owner of the Notes or Stock; or, to his Attorney or Agent. (b) By Post:—to the owner of the Notes or Stock; or, to his Attorney or Agent.

Dividends on Promissory Notes and Registered Stock are paid by Bills of Exchange on India, commonly called Interest Bills. (As an Interest Bill is payable in India in Rupees, the Bill is usually sold in London, for Sterling, at the Exchange of the day, through a Banker or Agent.)

HOURS, &c.—The Dividend Office is open from 9 A.M. to 4 P.M. (1 P.M. Saturdays).

The India Office (Bank of England) is open from 9.30 A.M. to 4 P.M. (1 P.M. Saturdays).

INVESTMENT OF DIVIDENDS.—Holders of certain stocks in amounts of less than £1,000 may instruct the Bank to receive and invest their dividends by filling up forms, to be obtained at the Head Office, at any of the Branches, or at any Money Order Office. A commission is charged of 1d. per £, or part of a £, with 3d. additional for each advice of a purchase, should such advice be required.

TRANSFER DAYS, any day but Saturday: Instructions 9.30 to 1 (to 3, fee 2s. 6d.); Executions 11 to 3; Acceptances 9.30 to 4 (Saturdays to 1). Transfers made on Saturdays (between 11 and 12.30) are charged a fee of 2s. 6d.

* When the due date of the Dividends falls on a Sunday or Bank Holiday, the Dividends are payable on the business-day next ensuing.

THE list on the following two pages contains the names of all the more important British Life offices, of eight Colonial companies (marked C), and of three American offices (marked A).

DATE OF FORMATION.—This is important, as in young companies the normal rate of mortality is not experienced, whilst expenses are necessarily greater owing to the larger proportion of new business.

CLASS OF BUSINESS.—The second column shows whether the company is conducted on the Mutual system (M), whereby the whole of the surplus or profits are allotted to participating policy-holders, or whether the company has proprietors by whom part of the surplus is received (P). Life offices transacting other insurance business are indicated by letters in this column. In such cases the Life funds are kept separately, and are not liable for the claims of other departments. The Share Capital is usually liable for the claims of all branches. The companies in the first part of the Table all transact "ordinary" Life business; the figures for Industrial business are stated separately where available.

LIFE FUNDS.—The Paid-up Capital of Proprietary offices that transact Life business only is included in the Life Funds. Paid-up capital of offices transacting other classes of business as well is excluded, being available for other claims than those of the Life Branch. The figures are taken from the latest annual accounts, the date in the majority of cases being December, 1908. The amount of the funds taken alone affords no indication of the financial stability of a company, which cannot be judged unless liabilities are considered as well as assets.

PREMIUM INCOME.—The annual premium income is in all cases stated after deduction of the amount paid to other companies for reassuring parts of such risks.

EXPENSES.—The expenses of a Life office include, in all cases where paid, commission to agents. The amount of expenses is less important in itself than in relation to premium income, consequently the percentage of the premium income absorbed in expenses is shown. The average percentage of British offices is about

ADVICE REGARDING LIFE ASSURANCE AND ANNUITIES.

The selection by an intending proposer for Life assurance of the office best suited to his requirements and likely to produce the best results should be carefully made under reliable expert advice. Whilst we have above indicated some points for consideration, the study of any tables or suggestions is not sufficient to enable any person without technical knowledge to gauge accurately the respective merits and attractions of the various companies transacting Life assurance. There are many good offices, but in the very best and most select class some are better adapted than others for particular purposes, and large sums may be saved or earned by intending proposers during the continuance of a policy, which may be life-long, through the precaution having been taken of obtaining reliable advice before a proposal is made.

On receipt of an inquiry containing full

particulars in regard to the matter on which advice is desired, accompanied by a remittance of a fee of 5s., addressed to the Publishers of WHITAKER'S ALMANACK, 12, Warwick Lane, Paternoster Row, E.C.4, and marked "Insurance," the Insurance Editor will be prepared—

INTEREST.—The rate of interest earned is important for comparison with the rate assumed in valuing liabilities, since the greater the margin between these rates the greater is the surplus, and, speaking generally, the larger the bonus. The rate of interest earned is obtained by dividing 100 times the amount of interest, less Income Tax, by the mean of the funds at beginning and end of year after deducting half a year's interest from the mean fund. In some cases, however, this does not quite accurately represent the yield, owing to the manner in which profit on reversions is dealt with.

VALUATIONS.—The last two columns of the table are derived from the valuation returns made by the companies to the Board of Trade. A valuation indicates liability under existing policies, after making allowance for the amounts to be paid and received. It is assumed that deaths will occur in accordance with a mortality table, and that interest will be earned at a certain rate. Various mortality tables are employed, those most usual being known as the H^m and O^m, and the corresponding Tables H^m(5) and O^m(5) which exclude mortality in the first five years of assurance. If a company assumes that it will earn a high rate of interest in the future, the net liability will appear less than if it assumes a low rate, while the liability on account of mortality appears greater by some tables than by others. The position of an office is most satisfactory when a stringent basis of valuation is adopted, because the margin between the calculated and experienced liability is larger and the surplus available for bonuses is greater. The O^m and O^m(5) tables in conjunction are more stringent than the O^m table alone, the H^m is more stringent than the American, and with every table the lower the rate of interest assumed the more stringent is the valuation.

The O^m Tables, which are founded on the latest and largest Life assurance experience, usually require slightly stronger reserves than the H^m.

(1) To advise any intending assurant as to the terms and descriptions of policies best adapted to suit the special circumstances as described, and to assist inquirer in the choice of the Life office which seems from its financial strength and earning capabilities best qualified to do justice to his requirements, and most likely to yield the most satisfactory and profitable results.

(2) To give similar advice to any person contemplating the purchase of an annuity.

C = Colonial Office.

A = American Office.

F = Transact Fire Business also.

S = Transact Sickness or Accident Business also.

O = Transact Ordinary Life Business also.

I = Transact Industrial Life Business also.

C = Does not pay Commission.

M = Transact Marine Business also.

* Alliance. Excluding Imperial and Provident funds.

* Caledonian. Fire business commenced 1865.

* Century. Accident business commenced 1885.

* Clerical, Medical & General. Large additional valuation reserves (about £300,000) beyond liability on Om(s) at per cent. basis.

* Commercial Union. Excluding Hand-in-Hand and West of England funds.

* Equitable. With additional reserve of more than one-half of clear surplus amounting to nearly £500,000.

* General Accident. Life business commenced 1906.

* Guardian. Excluding Westminster and General Life funds.

* Law Union and Crown amalgamated 1891.

* Marine and General. Also insures Mariners' &c., effects.

* National Mutual. Amalgamated 1895.

* Norwich Union. Exclusive of Scottish Imperial Funds. Expense ratio includes "centenary expenses."

* Phoenix. Fire business commenced 1782.

* Scot. Acc. Accident Business commenced 1877.

* Scot. Amicable. Net Premiums valued at 31 per cent.; so strengthening Reserves.

* Scottish Provident. 3 per cent. for all except oldest class of policies. Additional reserves, £305,915.

* Scottish Widows'. With large additional reserves.

* Wesleyan and General. These figures include ordinary life business.

ANNUAL PREMIUMS FOR WHOLE LIFE
ASSURANCE.

Life assurance may be effected either with or without participation in profits. If without participation, both sum assured and premium remain unchanged. If with participation, a higher premium is charged, and bonuses are declared from time to time, which may usually be applied either to increase sum assured or to reduce premium, if not discounted for cash. It is generally advantageous to select a policy participating in profits, but to overcome the objection of the higher premium an alternative

plan may be adopted in some offices whereby future bonuses are anticipated and used to reduce premiums from the outset. This is called the "Discounted Bonus" or "Cost Price" system. If the bonuses actually declared exceed those anticipated, the difference is credited to the policyholder; if however the anticipated bonuses exceed those declared, the balance has to be discharged by the policyholder or remains as a debt. Policies should only be effected on this system in companies which can point to good and consistent bonus records, and whose valuation reserves are particularly strong. We give below the average annual premiums charged for the three classes of policies.

AVERAGE ANNUAL PREMIUMS FOR WHOLE LIFE ASSURANCE OF £100.

The next table shows the annual premiums payable throughout life for assurance of £100 at death with participation in profits. Premium rates alone are not sufficient for judging the relative attractions of life offices. An office charging a high premium may give higher bonuses than one charging a low premium, and therefore bonus results and prospects as well as premiums have to be considered. Some offices only allow bonuses to be taken in reduction of

premium, and on this plan the rates are usually high to commence with, but are greatly reduced after a few years. Some reserve bonuses for the older classes of policyholders, and in these cases lower premiums than the average are usually charged. Most offices grant interim bonuses between valuation periods, and it is important to ascertain if this is the case before an assurance is effected, especially in cases of endowment assurance.

ANNUAL PREMIUMS FOR ASSURANCE OF £100 PAYABLE AT DEATH,

* London Life—These Rates are for nearest age and are subject to reductions—anticipated to be about 55% in the eighth year, with gradual increase thereafter. α Abstainers' Rates.
 * Mutual of New York—Rates are for nearest age. Sun Life—Reductions granted to total abstainers.

ANNUAL PREMIUMS FOR ENDOWMENT ASSURANCE OF £100. WITH PROFITS.

Under endowment assurances the sum assured is paid after a given number of years, or on the attainment of a fixed age. Should the assured, however, die during the endowment period, the sum assured is paid at death. The annual

premiums payable throughout the endowment period, or till death if previous, for the assurance of £100 at various ages of entry and maturity, participating in profits, are given in this table.

Life and Annuity Funds	128,659,580	335,416,839	1,529,965	37,167,778
	ORDINARY LIFE ASSURANCES.		INDUSTRIAL LIFE ASSURANCES.	
	No. of Policies.	Net Sums Assured.	No. of Policies.	Net Sums Assured.
Assurances in Force as shown by the latest Returns issued by the Board of Trade	2,670,284	757,048,167	27,813,839	278,444,501

THE following Table shows the amount of Annuity granted by the undermentioned Companies for every £100 paid. The age last birthday is that upon which the payment is based, but many offices quote intermediate rates for every half or quarter year of age. By some Companies a proportionate amount of Annuity is payable to day of death.

The Annuity is calculated as payable half-yearly; the annual payment is in nearly all cases higher if paid annually and less when paid quarterly. Some offices grant special terms in case of impaired lives.

Fire Insurance Rates.

Most leading fire offices belong to the tariff association, charging identical rates of premium. There are, however, a number of non-tariff offices which claim to assess individual risks independently on merits. Tariff rates of premium per £100 insured against fire for the more common classes of risk are as follows:—

Private Dwelling Houses, built of brick or stone and tiled or slated and in no hazardous proximity, 1s. 6d.

Household goods therein, according to class, 1s. 6d. or 2s.

Shops and Warehouses, similarly built and circumstanced, in which no hazardous goods are deposited nor hazardous trades carried on, from 2s.

Stock and Utensils in trade, fixtures, and household furniture in such shops and warehouses, from 2s.

Private Dwelling Houses, brick and timber built and tiled or slated, in no hazardous proximity, from 2s. 6d.

Household furniture in such dwelling houses, in one sum, from 2s. 6d.

Shops and Warehouses similarly built and circumstanced, in which no hazardous trade is carried on nor hazardous goods deposited, also *Stock and Utensils* in trade, *Fixtures and Furniture* therein, from 3s.

Loss of Rent during reinstatement of a building destroyed or rendered untenable in consequence of fire, and architects' and surveyors' fees necessarily incurred in the reinstatement of a building damaged by fire, can be insured against at same rates as the building itself.

A separate amount is required in every case upon each distinct building, and similarly upon contents unless insurance be subject to average.

Long Period Insurances.—Septennial and other policies for terms of years are sometimes issued for certain ordinary fire risks at graduated discounts.

INLAND POSTAL RATES.

To any part of the United Kingdom, including the Orkney and Shetland Islands, the Channel Islands, Isle of Man, and the Scilly Islands.

Letters.

Not exceeding 4 oz. 1d.
For every additional 2 oz. ½d.

Halfpenny Post.

Not exceeding 2 oz. ½d.

Parcels.

Not exceeding.	s.	d.	Not exceeding.	s.	d.
1 lb.	0	3	8 lb.	0	8
2 "	0	4	9 "	0	9
3 "	0	5	10 "	0	10
5 "	0	6	11 "	0	11
7 "	0	7			

Newspapers.

The charge is ½d. for the inland transmission of any daily or weekly registered newspaper (not including Christmas or other special issues), the weight being disregarded. If more than one paper be included in a packet, the charge is as by an insufficiently paid letter, or transferred to the Parcel Post whichever charge is the lower, with a fine of 1d. in addition to any deficient postage.

GENERAL REGULATIONS.

Letters.

NATURE AND WEIGHT.—Anything may be sent by letter post (except explosive, offensive or obscene matter). The weight is unlimited. Maximum length 2 ft.; width 1 ft.; depth 1 ft.

BLIND, LITERATURE FOR THE.—Papers, periodicals, and books impressed in special type: 2 oz., ½d.; 2 lb., 1d.; 5 lb., 1½d.; 6 lb., 2½d.

CONVEYANCE OF SINGLE LETTERS BY RAIL.—On payment of 2d. to a servant of the railway, in addition to postage at the ordinary rate, *Inland* letters not exceeding 4 oz. may be forwarded by the next available train or steamship by those companies in agreement with the Post Office, to be called for at the station to which the letter is addressed, or to be transferred thence to the nearest letter-box for postal delivery. The letter may be taken to a passenger station of the railway company or handed in at any express delivery post office (express fee of 3d. per mile).

EXPRESS DELIVERY SERVICE.—There are three systems by which *any article* (except those of a dangerous or offensive nature) may be specially delivered:—(1) By special messenger all the way, on *week-days only* (charge, which must be prepaid, 3d. per mile, or part of a mile, *inclusive* of all charges, but with a special weight charge of 3d. on each packet over 1 lb. in weight). (2) By special messenger after transmission by post (charge 3d. as before, *exclusive* of postage, with special charges as before). (3) In advance of the ordinary deliveries at the request of addressee (3d. per mile for one packet, and 1d. for every ten or less additional packets). For (1), packets must be handed over the counter with "Express Delivery" clearly marked in left-hand top corner. For (2), may be handed in or, if not to be registered, may be posted, and must be clearly marked as before. For Express Delivery

on Sundays, Good Friday, and Christmas Day, see p. 367.

NOTICE OF REMOVAL and for the re-direction of letters must be given on printed forms, to be obtained from the local postmaster or from postmen. Separate forms must be filled in for parcels and telegrams. The notice holds good for twelve months, and may be extended by payment of 1s. for second and third and 5s. for subsequent years.

RE-DIRECTION.—Letters may be re-posted free not later than the day after delivery (Sundays and public holidays not being counted), and must not previous to re-direction and posting be opened or tampered with.

REGISTRATION.—Registered letters and parcels must be handed to an agent of the Post Office, and a receipt taken. By prepayment of a fee of 2d. in addition to the postage and registration fee, the sender of a registered letter may obtain an acknowledgment of its due delivery. The latest time for registering for the night mails is usually half an hour before the box closes for letters; in the case of parcels, half an hour before the latest time for posting ordinary parcels. If an inland packet marked "Registered" be put in a letter-box it will be liable on delivery to a charge of 4d., less any amount prepaid for registration. The fees for registration and the limits of compensation are as follows:—Fee 2d., compensation £5; 3d., £20; 4d., £40; 5d., £60; 6d., £80; 7d., £100; 8d., £120; 9d., £140; 10d., £160; 11d., £180; 1s., £200; 1s. 1d., £220; 1s. 2d., £240, and so on, to 1s. 10d. £400. These fees include the ordinary registration fee of 2d. The highest amount of compensation obtainable for any one packet is £400. Compensation in respect of money of any kind (*coin, notes, orders, cheques, stamps, &c.*) will only be given in those cases in which the money is enclosed in one of the Registered Letter envelopes sold by the Post Office and the packet is tendered for transmission by Registered Letter Post. The compensation given in respect of coin will in no case exceed £5. Compensation for damage to a packet sent by Registered Letter Post will only be given in those cases in which the packet is conspicuously marked with the words "*Fragile, with Care.*"

DISPOSAL OF UNDELIVERED letters, packets, post cards, and parcels.—*Inland* letters undelivered, bearing full name and address of sender, are returned unopened; others are opened and returned if possible to senders, a registration fee of 2d. being charged should anything of value be inside. If without an address, and containing nothing of value, they are at once destroyed. Undelivered foreign letters are returned, unopened, after a short detention, to the countries whence received. If senders of ½d. packets place a request for their return, in the upper left-hand corner of the outside cover, in case of non-delivery, a second postage is charged the sender on their return, otherwise they are disposed of at the Head Office. If an undelivered parcel bears on the cover the name and address of the sender, it is returned to him at once. If the name and address of the sender are not shown on the cover, the parcel is sent to the Returned Letter Office of the District, where it is opened and examined. If it is found to contain the name and address of the sender, it is returned to him. No charge is made for the return of an undelivered parcel to the sender. If the name and address of the sender cannot be ascertained

from the examination of the parcel, the name of the addressee of the parcel and the Post Office at which it was posted are entered on a list, which is exhibited at the Returned Letter Office, where personal application can be made. Perishable parcels will be dealt with as may be requisite.
